To return to our own game: the questioner, not being, we will assume, a medical adept, concludes in his own mind that one of the structural organs of the body is not likely to have been fixed upon by his opponent (the next two answers must set him right, if this conclusion be wrong), and therefore he feels sure that it is either a limb or a sense. Mark his next inquiry. "Is light important to its operation?" Answer No. 9, "No."

Now light is important to the operation of all the limbs, and among the senses to sight directly; and indirectly, or for practical use, is certainly "*important*" (that was the word), though not indispensable, to the functions of taste and of touch, which are not comfortably, nor even safely, guided in their operations *without* light. Hearing and smelling, or the ear and the nose, are of the joint corporation of limbs and senses the only members perfectly independent of light in their operations, and, indeed, rather more acute and alive in its absence. The next question disposes of the doubt about the object being any internal organ: "Are there any brutes specially prized and specially used for a similar organ?" Answer No. 10, "Yes." (Fox-hounds, to wit; and no brutes, if they could speak, could say the same for themselves on account of their hearing.)

Our friend next asks, perhaps, "Is the possessor of it a personal acquaintance of mine?" Ten to one, the hesitation, the laughter, and the contradictory answers given here, enlighten the questioner completely. But suppose that an answer be refused, and that he asks again, "Do I know the man (the possessor) as well as I know the people around me?" Answer No. 11, "Yes." "Have I met him to-day?" The

circle breathes more freely, and the twelfth answer is "No." "Within a week?" Thirteenth answer, "No." "Within a month?" Fourteenth answer, "No." "Within a year?" Fifteenth answer, "No." "Within two years?" Sixteenth answer, "No."

Here he pauses triumphantly; the circle around him look equally triumphant. He is told with smiles and jeers that he will *never* guess it. He replies by begging the stake to be handed over to him. This is met by still louder derision. All gaze upon him with defiance; he announces that after one more question, that is, the seventeenth, he will at once name the object. This is not believed; he is supposed to be quite off the scent, since he has been asking when he met the person: this shows he imagines it must be some other person, not himself. But he has forgotten none of the answers: among them, he distinctly remembers having been told that he knows the individual as well as he knows any of the people around him. He now asks, "Have I ever met him?" Answer No. 17, "No."

"Then," quoth he, "the subject of your thought is incontestably—"

"What?" cries one.

"Who?" cries the antagonist, more cunning.

"My own nose," continues our victorious friend; and the antagonist drops his head, and pays his forfeit.

We have not chosen either a very easy or a very difficult specimen of the game. The easiest class of subjects are not subjects but sovereigns, Abd-ul-Medjid, Frederick William IV., her Majesty, and all that category to which belong any exceedingly notable individuals, dead or living. These hardly ever give a good run; they are generally pulled down about the twelfth question. A very difficult kind are abstract qualities, or their negatives—such as *truth*, *beauty*, *cruelty*, &c.; but these, although difficult, do not require many questions either; the game is longer, although the questions are fewer. Most guessers lose for certain; those who win, win in about two-thirds of the permitted inquiries, but fourfold the customary time.

Another very difficult class of questions is that in which the particular thing to be guessed belongs to an extremely vast number of like things in the final category. For example, a piece of money takes long enough to come at (as is only fitting); but suppose, when you have reached the piece of money, that you must start afresh, and find what particular piece of money, the challenger having selected that very shilling which he happened to see the cabman give you, about an hour ago, in change for your half-crown. The shilling is in your waistcoat-pocket. You cannot say that you do not know the object. So very severe and trying is this class of game, that if in strictness fair, it is fair in strictness only. It verges on the unfair. It is sharp practice at the least. Nay, as the essence of this game

DESIGN FOR A PENDENT FLOWER-BASKET. BY P. W. JUSTYNE.

consists of logical exactness, we much doubt whether the person who guesses a shilling, or even a piece of money, in general has not already won justly, truly, and fully, without entering upon the individualisation of that piece of money. We could support this view by arguments very hard to answer, but they would occupy too much space; and besides, whoever plays the game will be furnished with the arguments in question by the very replies themselves, which, in the progress of it, he must extort from his adversary. Suppose, for example, the challenger has been forced to answer that every pound sterling includes the thing in question, then he cannot afterwards insist upon his individual shilling; since it is not that individual shilling, but a sum equivalent to it, which is included in every pound sterling, and so on.

Enough if, in this slight sketch of an elegant and most intellectual pastime, we shall have added to those general resources by which an occasional spare hour may be profitably and entertainingly filled. M. G. K.

PENDENT FLOWER-BASKETS.

In submitting to your consideration the accompanying design for a pendent flower-basket, my object is to combine economy of cost with elegance, and also to render the article produced useful.

Pendent flower-baskets have of late years become very general, and the visitor to the Crystal Palace has ample opportunity of observing the very graceful and elegant effect they produce; besides which, in many situations they may be introduced where the ordinary flower-stand would be inconvenient. Hung before the upper part of a window, they act partly as a blind, and receive plenty of light for the growth of the plants. The only novelty, if so it may be termed, in this design is, the introduction of glass beads or bugles, which I think, to look well, should be white. A few amber-coloured ones, introduced in select positions, would improve the effect; these to be strung on wire, to form the basket-edge of the tray. This tray could be made of wood, zinc, or glass, but the latter would be expensive. Fine holes should be perforated all round the edge for the insertion of the wire. The beads forming the festoons would be better strung on strong twine, as they would hang more free; the chains from the top to be of wire. A brass rod passed through a glass tube, and inserted through the centre flower-pot, would support the tray by having a cross-bar underneath, and a nut to screw on; and by this means the weight of the tray and its contents would be taken off the chains, which would hang the more gracefully. The centre flower-pot could have some delicate climbing plant, which would entwine itself around the supporting-rod, while the other pots should contain pendent flowers.

A CORRESPONDENT.

Foster Winslow.

FROM A PHOTOGRAPH BY JOHN WATKINS.

FORBES WINSLOW, M.D., D.C.L.

Who is he that, not being a member of the family,—not being of necessity even a friend,—stands closest to home interests, and figures most prominently in the crises of home-life? Were this question put at thousands of our firesides, there can be little doubt that the answer generally, if not universally, given would be, *the Physician*.

Few indeed are there, except the very young, who cannot recal the composed face, the observant eye, the brief but pregnant utterance of him who is so often the interpreter of fate to a household. His words, pronounced as they are upon the issues of life and death,—upon all to which love clings,—have more often and more keenly thrilled the human heart than any words, except those divine ones which convert death itself into life, and the pangs of love into the assurance of immortality.

Sometimes, however, the functions of the physician are not confined to the sphere of private life. In both civil and criminal jurisprudence, cases occur in which his dictum decides the rights of property, of personal liberty, or the lives of accused men. A point arises as to the validity of a will executed during the alleged insanity of the testator, the chancellor chooses the physician as his referee, and the physician becomes virtually the judge; or the question hinges upon the mental responsibility of the homicide for his deed. The evidence of the medical man turns the scale, and it is his verdict which the jury echoes.

The person, then, to whom such important offices, both private and public, belong must ever be an object of social interest. We therefore give this week the portrait of Dr. Forbes Winslow, a man eminent, not only in the domestic, but in what may be called the judicial relations of his profession.

In cases where the point of insanity is mooted, whether before a civil or criminal tribunal, no name is of greater authority, or more frequently cited in legal reports, than the one which heads this paper. The criminal case of McNaughten, and the civil ones of Mrs. Cumming and Mr. Fussell, will occur to most readers.

In many trials of less public interest, but involving questions of personal freedom and the succession to property, Dr. Winslow has evinced, not only profound medical knowledge, but a power of analysing motive, and of striking a balance from conflicting and perplexed indications, which has more than once gained for him the warm acknowledgments of the Court.

In the opinions expressed by Dr. Winslow, both in his evidence and in his writings, we find important views of the nature and treatment of insanity, which views, though now widely adopted, owe their prevalence in no small degree to his own advocacy and example.

The favourite theory upon this subject with medical men, not many years back, was, that insanity is purely a mental disease—a disorder of the intellectual faculties. As a natural result of this doctrine, therapeutic remedies held a very secondary place in the received systems of cure. The more sanguine physician built his hopes chiefly upon the removal, by rest or diversion, of the irritating mental causes that had induced the disease, and men were not wanting in the faculty who regarded the patient as a victim of some inscrutable dispensation, with which no science could combat, and which could only disappear under influences as mysterious as those of its origin. To be "let alone," or to be amused, therefore, was often the best chance that befel the sufferer. To be coerced and punished for the symptoms of a malady deemed intractable in its nature, was a more frequent experience.

The great principle which Dr. Winslow has strenuously maintained and thoroughly demonstrated is, that mental diseases must be regarded as kindred in their nature to other affections of the brain, and that the former are equally amenable with the latter to therapeutic remedies. He holds

that there are no diseases of the mind *per se*, but that, in every case of mental aberration, a physical disorder of the brain has been induced; and that when the brain itself is restored to its normal and healthy action, the hallucinations attributed to the mind must of necessity disappear. This physician, in brief, would have the irregular manifestations of the reason viewed as symptoms of physical disorder in the brain, in the same way that loss of appetite and acidity are regarded as signs of a disordered stomach, or difficult breathing as a proof of an abnormal condition of the lungs. He does not hesitate to consider every nervous symptom as dependent upon a temporary or permanent lesion—an organic change, whether slight or serious—in the structure of the brain, the nerves, or the vessels ramifying through the material organ of the mind. In corroboration of this view, it has been stated upon high medical authority, that any morbid condition of the mind, if long continued, will reveal its source after death in an alteration of structure, appreciable either by the naked eye, the microscope, or by chemical analysis. Nevertheless, so intimate an acquaintance with the normal structure of the brain is required of the operator, that failures may often arise in detecting the changes wrought in so delicate an organisation, even where they really exist.

It will be seen from what we have said, that the speciality of Dr. Winslow's method is, to reach mental derangement through the medium of the morbid brain, and to treat that material organ with material remedies—to bring it, in a word, under the action of drugs. The brain with him is, to some extent, like a mirror. If dust collect upon its surface, it will give an obscure and partial image of the face, *i. e.* the mind, that it reflects. Clear away the dust, and a complete and accurate image of the mind will again be presented.

Our readers must not, however, suppose that Dr. Winslow relies on therapeutic agents to the exclusion of mental treatment. On the contrary, no one has studied its principles more earnestly, or applied them more judiciously. Zealously adopting the enlightened and benevolent views of Dr. Conolly as to dispensing, wherever practicable, with physical restraint, Dr. Winslow has probably carried the system of rational indulgence further than any of his contemporaries. He knows well that, even where the disease is material, the beneficent action of the mind upon the organisation is of the greatest importance. His principle is, to treat the victim of mental derangement as if he were sane, to accustom him to the ideas of self-government and responsibility, and to lead the vagrant fancy back to health by the track of habit. Unless the sufferer's malady be dangerous to others, he is accustomed to mix freely with society, to hear the topics of the world without discussed at the dinner-table, to share with the sane in the enlivening recreations of the ball-room or the billiard-table, and at times to take his country excursion on *parole*, totally unaware of the necessary *surveillance* to which he is subjected. Under regulations which never allow his infirmity to be suggested, it is rarely betrayed, and the chief sign of the disorder, if apparent, will probably be the extreme calculation designed to mask it.

A humorous instance of this calculation was witnessed by the present writer during a visit to a private asylum. The physician of the establishment received a few friends at dinner, and the patients, as usual, mingled with the guests. In the course of the dessert a curious wine was introduced, to the merits of which more than one connoisseur bore emphatic testimony. The reader's humble servant, influenced by these encomiums, filled his glass, but forbore to raise it to his lips, as his immediate neighbour, a clergyman, was at the moment enforcing some theological view with great earnestness of voice and gesture. After a pause, the layman's verdict on the wine was demanded, when, to his surprise, an empty glass stood before him. It was replenished, but with a similar result. The baffled guest filled a third time, and watched his glass narrowly. The controversial divine by his side continued his argument, and pointed upward, as he had done before, with an expressive finger.

This time, however, the eye of his companion only feigned to follow the digital indication, and he observed the speaker, apparently in the warmth of his exposition, interpose his arm before the wine-glass, sweep it from its place, turn suddenly and drain it. This being done, the empty vessel was restored by a like action of the arm to its original position. It was now the guest's turn to indulge in a pantomime with his host, by whom the recurrence of the joke was quietly prevented. It transpired afterwards that the clerical patient had been enjoined to confine himself to one glass of wine, and that, while abstaining from re-filling his own glass, he had thus ingeniously evaded the regulation.

A recent article in the *Quarterly Review* cites many instances of the benefits resulting to patients from treating them as if they were in a sane condition. We find, *inter alia*, a curious and significant anecdote of a tailor, who, during his residence at Colney Hatch Asylum, persisted in tearing to shreds the gray vestments which he wore in common with the other patients. The physician at length ordered the delinquent to be attired in a brand new suit of ordinary clothes. By some law of association, a healthy impulse was given to the man's mind, and a speedy restoration to sanity was the consequence.

The same Review quotes from the *Psychological Journal*, edited by Dr. Winslow, some interesting particulars as to the treatment of lunatics at Gheel, in Belgium. In many cases the patients dwell amidst families in separate cottages. Some of the lunatics go out to their ordinary occupations of field-labour; and on their return from work, they are often met by their own children, and accompanied by them to the threshold of their homes. This realisation of the home-idea under such circumstances has a charm and a value which cannot be over-estimated. We are glad to find that a modification of this plan has been introduced into the Devon Asylum by the resident physician.

Amongst the services rendered by Dr. Winslow in mental disease, none is more important than the emphasis which he has laid upon the premonitory symptoms—the *incubation*, as he calls it—of insanity. In this kind of malady, Time is the great enemy to be overcome. The warped shoot may be straightened, but rarely the warped tree. Dr. Winslow's numerous writings abound with earnest warning and practical suggestions upon this head. How perseveringly he has laboured in the medical literature that relates to mental disorders, may be inferred from the titles of his works. We find amongst them lectures delivered, as Lettsomian Professor, on "The Psychological Vocation of the Physician," on "The Medical Treatment of Insanity," on "Medico-legal Evidence in cases of Insanity," "The Anatomy of Suicide," "The Plea of Insanity in Criminal Cases," and, above all, the *Psychological Journal*, established by his unaided exertions.

"This Review," says the *Quarterly*, "which originated with, and from the first has been under the able editorship of, Dr. Forbes Winslow, has given an immense impulse to the study of psychology. It has enlarged the views of the physician of the insane, and by extending his horizon, has given him a far better knowledge of the special department to which he formerly confined his studies. It is as impossible to understand the working of a morbid mind without possessing a knowledge of its ordinary action, as it is to interpret the sounds of a diseased lung without being first acquainted with those of a healthy one. The great service which Dr. Winslow has rendered by unravelling the phenomena of mind in its normal, as well as in its disturbed state, entitles him to a very high meed of praise, and has deservedly ranked him among the first psychologists of the day."

We here dwell chiefly upon Dr. Winslow's labours in connection with insanity, because the subject is one of great public interest. We ought, however, to add, that his practice embraces general affections of the brain and of the nervous system, and that he is equally consulted in all. We understand that he has nearly completed an elaborate work on *Softening of the Brain*, and other obscure diseases of that

organ, a task which has involved the thought and observation of years.

Eminent talents and unwearied diligence have, in the case of this gentleman, met with their due recognition. Early in his career, Dr. Winslow was elected a fellow of the College of Physicians. He subsequently filled the honourable post of Lettsomian Professor of Medicine, was next elected President of the Medical Society of London, and received the crowning distinction of Doctor of Civil Law from the University of Oxford at the period of Lord Derby's installation.

These honours, the just meed of great mental endowments, have been conferred upon one whose moral worth leaves envy neither a pretext nor a motive. Frank, benevolent, genial, and sincere, the character of the man enhances the skill of the physician, and is, indeed, part of it. Our portrait of Dr. Winslow, engraved from the photograph by Mr. John Watkins, of Parliament Street, is an excellent likeness.

THE PILGRIMS TO NONNENHEIM.

A ROMANCE OF YESTERDAY.

BY THE AUTHOR OF "STORIES BY AN ARCHÆOLOGIST AND HIS FRIENDS."

It was gray dawn; the inland sea of Constance lay solemnly beautiful in its vast expanse, its translucent hue of milky green chastened to a pale silvery tone by the faint radiance of the morning light that began to spread athwart its wide unrippled surface.

In one of the villages that checker here and there the irregularities of its western shores, there had been, on the previous evening, a call for a large boat to take a party of travellers across the lake to Nonnenheim, which accounted for the unusual bustle that was filling the little bay with such extraordinary commotion at that early hour. After a complicated series of evolutions, the precise end of each of which it was not easy to comprehend, the boatmen succeeded at last in detaching a moderately-sized row-barge from a crowd of smaller craft; though not without an immense amount of useless vociferation and shouting, which seemed sadly in disaccordance with the sweet repose of the surrounding scene, and the impressive stillness of the sleeping waters thus so rudely disturbed from their rest.

Just as the sun began to loom in his morning splendour over the eastern horizon of the lake, transmuting its cool tones of silvery gray by Nature's gorgeous alchemy into the warmer hues of ruddy gold, the barge reached the miniature jetty, and a group of several persons might have been seen approaching it from the doorway of the principal, or rather solitary, inn of the place.

The individuals composing the group were of exceedingly various aspect, and clothed in almost every variety of modern costume that caprice or fashion, or some peculiar idiosyncrasy, could suggest. There were features, and figures too, of every proportion—round, rubicund, Germanic faces, framed in bushy masses of hair and whisker and beard, of the light flaxen hue of the north, and others angular in form and aquiline in profile, accompanied by the black lank hair and dark eyes of another race.

Notwithstanding the antagonistic grotesqueness of many of the figures, and the fantastic variety of their cloaks, coats, and nether garments,—garnished, moreover, with every conceivable extravagance of collar, buttons, and braidings,—there was yet something about their general air and bearing, in step, in look, and in a something indefinable by words, that not only proclaimed among them a general congeniality of nature, but also some other bond, which at the same time marked even the least statuesque, even the most grotesque, of those figures as belonging to a social region far above that of the common herd, busied merely with the every-day pursuits of life.

This group of travellers was soon followed from the inn

by some score or so of sturdy peasants, each bearing one or more of such musical instruments as form the modern *matériel* of a complete orchestra; no vehicle of melody appeared to have been omitted, from the stately bulk of the ophicleide, or "serpent," to the miniature dimensions of the octave-flute.

The mystery concerning the vocation of our travellers was solved. And the few scattered gazers, who stood curiously watching their proceedings, soon learnt that they were a company of enthusiastic musicians, eminent in various degrees, who had met there by preconcerted arrangement from different, and, in some cases, distant parts of Germany, in order to pay a visit of homage to the tomb of a recently-departed brother in art,—the Kapelmeister, Peter Joseph Lindpaintner, whose remains were sleeping in a humble tomb in his little native town of Nonnenheim.

The musicians were not alone; a stranger had joined their party, who had not arrived with them, and was evidently "not of them." His request to be allowed to join the expedition had been received with that cordial politeness with which true artists always acknowledge and accept the advances of volunteers to their ranks; and, after a few *contretemps*,—for men of art are seldom adroit in nautical affairs, either on salt or fresh water,—the row-barge pushed off, and the whole party were soon gliding swiftly over the lake.

There was a soothing influence in that vast surface, in its deep repose, that acted as an almost immediate opiate, or rather delicious sedative, under the spell of which the voluble interlocation of the musicians, and with it their energetic gesticulations, subsided into silence and stillness; and so they sped mutely forward, voiceless and motionless as shades (somewhat grotesque ones, it must be owned) passing the waters of oblivion.

The stranger, whose dress and bearing marked him at once as belonging to a superior rank in the social scale, and whose slightly grised hair alone indicated that he had passed the zenith of youth and entered on the table-land of middle-life, might have been at once recognised by an Englishman as a compatriot, though his present companions did not appear to have arrived at that conclusion. He had been visiting the Falls of Schaffhausen, and had then somewhat diverged from the plan of his tour only to obtain a passing glimpse of the Lake of Constance, before plunging into the Alpine scenery of Switzerland. But hearing of the expedition of the band of enthusiastic musicians to Nonnenheim, he had, impelled by some irresistible impulse, begged permission to join their party.

As the first impression of the all-subduing calm of the sleeping lake wore off, the party of musicians gradually broke their silence; at first only by enthusiastic snatches of desultory exclamation, uttered *sotto voce*, on the enchanting beauty of the scene and the hour, but by degrees the conversation resumed its original swing. After much discussion, it was resolved that they should commence the performance of some of the most successful pieces of the departed composer, at once to honour the memory of Lindpaintner and to beguile the hours of their passage across the lake.

With what honest enthusiasm and conscientious accuracy and painstaking each piece was executed; how lusciously sweet were the blending sounds upon the wide waters, and how richly laden with melody was the breeze that wafted it towards the shore! The stranger listened with the gentle yet intent devotion of a true lover of art to the various compositions as they were successively performed,—most intently, perhaps, to a *Kyrie*, solemn and majestic in its opening and development, and terminating in a glorious burst of acclamatory harmony. Yet he was not utterly absorbed, as were the enthusiastic performers, until they at last commenced a lovely melody, the first phrases of which were breathed in the rich deep tones of a clarionet. Then he seemed suddenly bound as by a spell; and covering his face with his hands, bowed his head to his

knees, and so remained till the last vibrations of the closing note had died away.

And so they reached Nonnenheim; and the enthusiastic musicians, full of respectful bustle, hastened to the resting-place of the dead composer, where orations, full of heartfelt praise and honest German affection, were poured forth, and showers of *immortelles* were scattered over the simple tomb.

They next proceeded to the market-place, and other conspicuous spots; for they were discussing the relative desirabilities of site for the construction of a more splendid tomb, or erecting a commemorative Iconic statue in some conspicuous situation in the composer's native town. There had been many previous meetings in other places on the subject, at which it had been decided that the master's celebrated opera, *Der Vampyr*,* should be performed in the Great Theatre at Stuttgart, with splendid decorations, and by eminent musicians, whose services were to be gratuitously given, in order to raise the necessary funds.

In the midst of these and other arrangements, the time for return had arrived; and the party were about to re-embark, when it was observed that the stranger was not among them. To quit Nonnenheim without him was a breach of politeness which could not be thought of; and several of the party volunteered to return, and seek their lost companion in the town.

For some time their search was vain; but at last they determined to revisit the tomb, and there, as they approached, they perceived the missing member of the party. He stood at some little distance from the grave, his travelling-cap in one hand, raised above his head, in token of reverence, and his eyes bent intently, as it seemed, upon the brief epitaph.

He did not hear them approach; and when a gentle touch roused him from his reverie, he started like one awoken suddenly from a deep sleep; and apologising to his new friends for his breach of courtesy in having thus unwarrantably detained them, hastened to the boat; and the rowers, refreshed by an unusually sufficient meal, pulled lustily away, and Nonnenheim rapidly faded into a dusky spot in the far distance.

The wrapt devotion of the stranger at the tomb had created much curiosity among the pilgrim musicians, and many were the polite innuendoes put forth with a view to its gratification. One politely suggested that the devout admirer of Lindpaintner who had honoured them with his company was not perhaps *utterly* unknown to a certain celebrated composer of North Germany, with whose person they had not hitherto the pleasure of being acquainted. In default of a satisfactory reply, another of the company suggested that a certain living celebrity, the well-known ornament of a school south of the Alps, was known to profess a high admiration for the works of the deceased Kapelmeister; but neither did that venture yield a more profitable result, and other attempts shared a similar fate.

The stranger, perceiving that the demon Curiosity was at work with his companions, to the great disturbance of their quiescent and phlegmatic temperament, at last broke through his reserve, and said: "Gentlemen, I have not the honour to be a musician, I am only an obscure unknown poet; but if you wish to know why I stood at the tomb of Lindpaintner as at a shrine, I will tell you; for as it is getting dark, I shall not have to blush for the, perhaps foolish, emotion my features may betray during the narration.

There was a general call for the story of the stranger; and to the monotonous but sweet melody of the cadenced dip of the oars in the unseen water, now completely hidden by the deepening darkness, he commenced:

"It was in Paris, many years ago, though it seems but yesterday, I was at a *soirée* in one of the hotels of the old noblesse, in the Faubourg St. Germain; one of those dwell-

* A very different work to the opera bearing the same name, by Marschner, who subsequently treated the same subject.

ings that have still, or had then, a reflected perfume of the proud and heartless refinement of the *ancien régime* still hanging about them—a something of a former state, in which a 'noble' and a 'man' were not deemed creatures of the same genus. The atmosphere of that bygone age seemed to linger there, among the folds of the rich damask curtains, and even in the forms of new furniture, which aped in its counterfeit white and gold the aspect of the past; and the same spirit glared forth in the livery of the ostentatiously numerous *laquais*, which seemed rather of gold embroidered with cloth, than cloth with gold. But above all, it was expressed in a certain supercilious air in both host and guests, and a peculiar lurking insincerity that lay beneath the sweetest smiles; and, not least, in the light, playful, sneering tone with which the chief features of recent progress, and the general spread of education, were alluded to and ridiculed.

"The tone, and the atmosphere, seemed to me unnatural, unwholesome, and oppressive; and I was about to leave that unsatisfactory region of gilded ceilings and parquetry floors and tapestried corridors, when my determination was suddenly arrested by a sound issuing from an inner apartment, to which I had not thought it worth while to work my way through the crowd of silk and muslin and lace and embroidered coats that filled all its approaches. Whether others noted the peculiar, the celestial sweetness, of that long drawn-out sweetly-thrilling note I know not; but I—I stood spell-bound. As the first phrase defined itself, and I perceived that it was uttered by a female voice, I felt myself impelled to still more wrapt attention. As the melody advanced, there appeared to me something so heavenly in its expression and rhythm, that I could no longer repress my over-excited curiosity, and forced my way, as quickly as I could, and I fear with some rudeness, to the innermost room of the suite, a richly decorated boudoir, from which the music issued.

"There I heard the rest of a melody that appeared to me almost divine; and as I first obtained a view of the singer, and saw the seraphic glistening of the clear transparent eye, as the deepest pathos of the air was reached, and the soft tenderness of the smile, as a lighter passage was breathed forth with the facile brilliancy of inspiration, I doubted whether it was the power of the artist that invested the melody with such surpassing sweetness, or whether the melody itself were the creation of that rare class of genius which, once in many generations, fills the halls of civilisation with an atmosphere of melody in harmony, in unison, with the imaginations and aspirations of its time. I soon perceived, however, that it was from neither solely, but from the happy blending of congenial powers on the part of the artist with a work peculiarly fitted to its special capacities that the beautiful result was to be attributed; and as I continued to gaze at the performer during the rest of the air, I observed in every outline of her nearly faultless features, in every movement of those graceful arms, a breathing spirit of harmony, formed to be the worthy interpreter of such a melody as that which was then filling that gilded and meretriciously decorated boudoir with sounds so pure, so ethereally lovely, that it seemed to me they should only have found utterance among the sacred incense of some cathedral altar. As the accomplished *artiste* ceased, and the *Brava! brava!* of applause rose from the perfumed crowd, I made my way to the piano; and taking up the piece of music which had been left in its place, I found that it was the well-known air of the soprano in the second act of Lindpaintner's *Der Vampyr*.

"A lovely air," muttered several of the listeners in the boat, who had till then maintained a profound silence,—'a lovely air.'

"I found, continued the stranger, that the singer was Mademoiselle D—, the daughter of an *émigré*, and born in England, just before the restoration of the Bourbons, at which time the family returned to France; but who, having failed, after many years' litigation, in the attempt to recover

their sequestered estates, were on the eve of departure for America.

"When I next called upon my friends of the Faubourg St. Germain, which was within a few days, the D—s had already left France; but the reminiscence of that melody lingered strangely in my mind, so perfectly, so completely, that the very sounds appeared again to vibrate in my ear; and, with a power that seemed an inner sight, I could still perceive every note of the music, and, I need not add, every lineament of the form of the fair girl who had given such exquisite utterance to its divinely melodious phrases. I framed theories of poetic art on the rhythm of that melody; and a book of poems, created on the theory so evolved, was in due time, with the vanity of a young author, given to the world; but the world," said the stranger, smiling bitterly, "heeded not the gift, and thenceforward the author wrote for himself alone. But there was a void in his heart which still longed to be filled—to be filled with the image whose beau-ideal haunted every thoughtful moment.

"Years passed," resumed the narrator. "I visited in turn nearly every theatre in Europe, whenever I heard that *Der Vampyr* was about to be performed. I soon knew every note of the whole opera by heart; but when *that* melody was sung, even by the greatest artists of the age, it seemed shrill and discordant, even its rhythm halted and jerked, and I almost invariably left the theatre till it was over.

"At length I grew weary of the conventional routine of society, and even of the ordinary excitement of travelling; yet a continuous restlessness seemed to impel me, and I rushed, objectless, from one country to another. One day, I scarcely seem to know when, but it was towards evening, I was passing through a forest,—no matter what forest,—and was hastening towards a point where I had been informed I might make sure of obtaining decent accommodation for the night. While that point was still distant, I saw to the left of the road a low timber dwelling of some extent, from the massive brick chimney of which issued a column of smoke that had a cheerful human look in the depths of those almost interminable forests.

"As I approached it I felt a strong and all but irrepres- sible desire to stop; but I had heard that the people of those isolated dwellings bore an ill name in the region I was traversing, and I resolutely spurred forward. Just as I was passing the building, however, a sound issued from it that suddenly arrested my course, as though an unseen arm had been thrust across my chest, and barred my passage.

"It was that melody again, not distorted as I had heard it in the great theatres of Europe, but uttered once more with that wondrous wedding of sense to sound, that marvellous and intuitive knowledge of the inner secret of its charm and beauty, the recollection of which still haunted me; and I felt again, in the depths of that wild forest, the same spell woven round me that I had first known in the gilded boudoir in the Faubourg St. Germain. You may guess the rest. After a few brief, brilliant months of such happiness as one dreams of in youth's brightest visions, we were married; and in a few months more," and here the speaker lowered his voice till it was scarcely audible, even in the deep stillness of the night,— "and in a few months more she died."

There was a long silence, which none ventured to break, and then the speaker resumed: "I could never realise again the perfect reminiscence of that melody, so strangely bound up with my brief dream of earthly happiness; the chain of its sweet rhythmic progression seemed for ever broken, and its connecting links lost beyond every effort of memory or imagination to recover. I never again heard, nor was even able to imagine it perfectly, till this morning. When your party was pointed out to me as about to proceed to Nonnenheim, to visit the tomb of Lindpaintner, I felt an irresistible impulsion to join you; and then, on the waters of this lake, I again heard it in what seemed all its wondrous power. I feared, as I recognised the first bar of the melody, that it might, as it proceeded, become distorted and inter-broken,

as in my own imagination; but perhaps you, in your artistic enthusiasm and sympathy,—perhaps you, were in spirit-union with the genius of the author."

The stranger uttered the last words vaguely and irresolutely, and the listeners instinctively looked towards each other, though none could see the features of his neighbour for the thickening darkness.

"I heard it again and again, in imagination," resumed the stranger, "at the tomb, and the floating music seemed to wrap me as in a clinging atmosphere of melody. Play it once more," he continued, addressing the musicians,— "once more, the last time, but soft and low as an echoed sigh—sweet and gentle as the last faint vibration of a lovely sound should be."

And the musicians sought their instruments in the dark, and one of them counted the time of an introductory bar in a constrained whisper, and then the melody arose in a low murmur from the unseen instruments and invisible performers, like some mysterious voice of the night—so soft, so finely drawn, so sweetly attenuate, that only in the intense silence of the night's stillest hour could it have been heard.

"Yes, yes," murmured the stranger, as the performers ceased, "you are, you must be, in spirit-union with its creator, and so was *she*; and in the spirit-world, she will not be *mine*, but—but *his*."

And as he spoke, the carved prow of the barge grated against the little pier, and the party hurried silently ashore, seeking with quickened steps the light that at some distance shone cheerfully at the door of the inn. When they were assembled in the principal room, they perceived for the first time that the stranger was not with them, and could nowhere be found. As they went forth again to seek him they were told that he had been observed walking swiftly out of the village towards Schaffhausen, while others said that he had neither been seen or heard after the landing.

At last the searching party reached the barge, where the red light of the horn lantern they carried fell upon the form of the stranger, still sitting in his place. There was a singular but sweet smile playing over the features, but they were pale and cold; and the broad chest heaved no longer with the breath of life;—it had passed away with the last notes of that whispered melody, and the gently murmured words, "She will not be mine, but his."

SONGS.

By W. C. BENNETT.

YE roses, with her blushes blow;
Ye lilies, lift her neck of snow;
Thou dusky night, ye starry skies,
Show forth the dark light of her eyes;
Thou rosy morning, steal to earth
With her gay smiles, her sparkling mirth;
You dewy tears of twilight eves,
Weep softly, softly as she grieves,—
That ever she may present be
In all sweet sounds we hear, in all sweet sights we see.

Thou, Music, with her low tones stir
Our hearts; thou, Painting, image her;
And thou, white Sculpture, let her seem
To smile from every marble dream
Of thine, that she may ever be
Fair in all fair things shaped by thee;
And thou, O Poet, to her give,
Sweet, in thy sweetest songs to live;—
So thou, blest Art, shalt give her part
In all thy lustrous life in man's delighted heart.

Dreams that I dream—sweet dreams!
The length of a crowded street,
A light form tripping to me,
That makes my full heart beat;

And a meeting that, thought of, seems
Too sweet for a thing of dreams:
Dreams that I dream—sweet dreams!

Dreams that I dream—wild dreams!
A looking in tearful eyes,
In eyes that for love of me
Will not utter the soul's wild cries;
And a last farewell, that seems
Too bitter for only dreams:
Dreams that I dream—wild dreams!

[Continued from p. 184.]

SANDRO BOTTICELLI died in the year 1515. He was one of the painters of the Sistine frescoes in the Vatican. He was a scholar of Fra Filippo Lippi, the passionate monk who stole his mistress from her convent, and painted her as a Madonna. We have referred before to his picture of the "Nativity," at Manchester, from Mr. Maitland's collection. Of all existing Nativities, it is perhaps the most interesting.

In the centre of the picture there is an open shed or tent, with a long thatched porch in front. Three angels are on the thatch, with a book between them; they seem to be singing. Over them, in the air, twelve of the heavenly company, joining hands, wheel round in a circle, carrying scrolls and olive-boughs. They look heavenward as they fly, and sing "Gloria in excelsis!" They are bareheaded and barefooted. They have taken off their crowns in homage, and slung them to the olive-boughs. The background is golden behind their flowing robes and many-coloured wings; but there is the blue sky beneath. Under the porch lies the new-born Christ, looking upwards. He touches his lips with his finger, to signify that he is the Word made flesh. He raises his infant foot, to foreshadow his coming triumph over the devil. His mother kneels on the ground before him; her face bends over him, but her eyes are nearly closed, and see nothing outwardly. Her countenance, which is beautiful, and painted with extreme delicacy, expresses a speechless sorrow. She does not hear the rejoicing angels. Her blue robe is drawn over her head; her hair hangs loose; her hands are clasped together. She is a mother thinking of the coming sufferings of her child. Opposite to her, the infant between them, Joseph sits; his head bent on his knees, and the face hidden. On the left, an angel with a branch and scroll points out the central group to three men who kneel in worship. These figures have no doubt suggested the name given to the picture in the catalogue. The kings, that is, the wise men from the east, who are generally regarded as kings in Roman Catholic legends, are always three in number; one of those in the picture has the traditional beard of the elder king, and they all wear flowing robes. But they bring no offerings; have none of the usual attendants, and wear no crowns, except crowns of olive-leaves, which the angels seem to have put on. The virgin does not present her child to them, and they are introduced behind him. They may be saints, or may represent the patrons of the artist; or perhaps Botticelli, in his fanciful way, has disregarded tradition, and brought them there simply as wise men, in contrast with the shepherds. At any rate, it is not their visit, but the birth of Christ, that is the subject of the picture. On the right, another angel leads two shepherds to the spot. They wear short coats, pouches, ragged leggings, and the olive-wreath. In front the ground is rocky, with a descending path. Quite in the foreground are the six remarkable figures embracing one another. Three angels eagerly stretch out their arms and necks towards three men whom they are meeting; the

angels are barefooted, as usual, and have brilliant wings. The men wear shoes; two of them have red stockings; they have received olive-branches from their celestial friends. The salutation is most amusing: they kiss each other, but the embrace is at arm's-length, as if any thing like a regular cuddle between a man and a seraph would be indiscreet in the extreme; and the straining of muscles to get at one another without coming any nearer is whimsically severe. In contrast with their joy, six devils, half-frantic, half-faint with fear, wounded by long spears driven at them by invisible hands, seek to hide themselves under the rocks or in the ground: one, lizard-like, lies terror-stricken on a stony ledge; a second is only a woeful head in the dark right-hand corner; two of them have nearly sunk out of sight in the foreground. Olive-bushes spring up in all directions. There is a thick olive-grove behind the tent; and the morning-light is seen between the stems of the trees and on the clouds beyond the flying angels. The ox stands sedately in his stall, and the ass looks down with benignant wonder upon the child. The whole picture is set to the angels' song. "Glory to God in the highest" is expressed by the upper portion; "On earth, peace," by the centre; and in the foreground, "Good-will towards men."

Botticelli had been long in his Italian grave before David Teniers the younger was born at Antwerp. There was a hundred and fifty years in time, and the breadth of Europe in distance, between the two painters; but their works may be seen under the same roof at Manchester; and nobody should lose the opportunity of turning at once from this "Nativity," painted in Italy at the beginning of the sixteenth century, to the "Christ crowned with Thorns," painted in Holland about the middle of the seventeenth. We may notice here, that the date assigned to the Teniers pictures in the catalogue, 1582 to 1649, is that of "old" Teniers. David Teniers the younger was born in 1610, and was painting his best works about the period of his father's death.

One's first idea in looking at the "Christ crowned with Thorns" of Teniers is, that a number of Dutch boors are playing at sacred tragedy, and that the whole thing is a burlesque. The common dirty room, the woebegone chief figure, the mere matter-of-fact proceeding and accessories, are altogether ludicrous beside the passion and poetry of the earlier southern art. Yet this very picture is the offspring of a power more enduring than Botticelli's beautiful enthusiasm, and the principles it illustrates are the foundation-stones of whatever excellence is to be looked for hereafter.

In the last division of the gallery of old masters, two pictures of St. Francis hang side by side. One is by Zurbaran, who died in 1662; the other by Trevisani, who was born in 1656. The first is a dark spectral monk, standing under a gloomy arch with a deep black shadow; the second, a wan, wasted, tearful saint, kneeling before a crucifix, wild roots for food, and a skull for company beside him, and the marks of Christ's sufferings on his hands. These were the dying efforts of southern art. It had seen its highest visions; its eyes were still straining after them, but its life was spent. In the north there was a change also. Art had grown wilful and worldly, but it had not grown weak. Instead of perishing, it shot up again in a new direction, though from the same old root. The root was the love of truth.

The Dutch masters of the seventeenth century are the fathers of what is vilely called "genre" painting—a detestable word; an affectation in France, a barbarism in England, without one single thing to recommend it, except that it means hardly any thing, and may include therefore whatever has not been named before. Why cannot we call it by some name an English tongue can utter, and be happy?

The Dutch paintings at Manchester are numerous and very capital. Here are drinking-scenes, gaming-scenes, dancers, singers, family-lectures, and family-jars. We are among birds, monkeys, fruit, peas, herrings, and pipes. Whatever belongs to the positive every-day life, or to the dirty, jolly, good-for-nothing aspects, of the world is represented with conscientious precision and a prevailing aptitude for fun.

There is Jan Steen's "Merry-making," where the extravagant mirth of the boy with his hat under his arm, and the twinkle of the girl's eyes as she drinks out of the coffee-pot on the ground, are indescribable. There is Shalken's "Roi detroussé," a game at forfeits more laughable than modest; for the loser has his upper garments taken off by the other players. There are Terburg's famous and marvellous "Satin Gown," Interiors by Ostade, Greengrocery by Mieris, and many more home-scenes quite as entertaining. This is as much like Italian art as a cabbage is like an asphodel; but the spirit in which these Dutchmen painted possesses two grand features of its own. It is a truthful spirit, and a happy one. It loves real life, and thinks this world a very good place to live in. It forgets, indeed, that there is something still better than this world. The strong fellow has not yet found the mightiest prince of all; but he keeps his strength, and is in the way to find him.

With these pictures the works of the old masters come to an end, and we may pause to think what is to follow them. For southern art there is no revival; it has lived, and died. The north alone retains the essence of life. It is among ourselves, in England, that the most vital part of it is to be found. That northern wall is ours by inheritance; for we are of the race of the Van Eycks, and the spirit in which their altar-piece was conceived and executed descends to us through a line of artists whose chief attributes are truth, cheerfulness, and power.

Hogarth came into the world just as Teniers had left it. The history of modern painting begins with him.

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

VIII.—"WITH WIND AND RAIN."

THEY buried Nicholas Drew in the churchyard of St. Mark's, just without Friargate. The search after his murderer was prolonged for weeks, but no clue could be found, and speculation exhausted itself without discovering any adequate explanation of the foul crime.

"Wait," said Martha, "wait. We shall live to see him punished yet. The blood of murdered men will not sink into the ground until the hand that spilt it is cold."

It was a dismal winter. Adie lay long, hovering between life and death; sometimes quiet and forgetful, at others roused by a shuddering remembrance of the awful scene she had witnessed. St. Barbe would have removed her to his own house; but, with a singular pertinacity, she clung to Nevil's Court and refused to leave it; even the entreaties of Laurence Royston, who had returned to Eversley at the first summons, failed with her in this instance. He was very faithful and constant in his attendance upon her; and when she at last issued forth from her chamber, and took short walks in the open air, he was invariably her companion. Winter was merging into spring, when, supported by his arm, she tottered down the stairway for the first time. There was a tender April shining in the sky, no clouds, no wind, and a fresh warm air. They stood a few minutes in the Court with Mrs. Parkes, and then went out into College Lane.

"Which way shall we go, Adie? By the river-side?" asked Royston.

"No; to Grizzie's grave. I have not seen it yet," she replied.

Laurence remonstrated with her, but ineffectually; so they turned towards Friargate. Many people knew the poor girl in her trailing black garments, and with her mournful face, and gave her a word in passing of kindness and encouragement: doubtless they suspected the pious

THE GARDENER'S DAUGHTER. BY A. J. WOOLMER.
[Society of British Artists.]

errand on which she was bound. The iron gate into the churchyard stood open, for a wedding-party had just gone in; so Adie and Laurence entered alone. The grave had been made close to the footpath, the rank grass already covered it with greenness, and a plain stone, with the name and age, had been put up at the head. They stood by it a few minutes in silence; but the place was very public, and curious observers were gathering, both in the porch and about the gateway, to see the bride and bridegroom issue from the church. Adie turned away with a deep sigh.

"When I am here, Laurence, I do not long for revenge so much," said she; "but sometimes I feel as if I could kill whoever murdered Grizzie with my own hands. Do you think God will let him go free always?"

Royston evaded a direct reply, and tried to turn her thoughts into another channel; but he was hurried and confused himself, and, after a few disconnected sentences, he became silent. They took their way out into the country, amongst the fields and hedgerows, which were changing their black winter robes for a green and purplish hue; the birds twittered in their nests, and all living nature seemed lifted up and vivified by the warm breathing spring.

Royston returned to the subject of Adie's leaving Nevill's Court, and urged it vehemently. "You will never be happy in that haunted old house," said he; "you will dwell on

your miserable recollections until your mind is quite unhinged. Be guided, Adie; go down south with me. Will you?"

He looked anxiously into her face, but she made a negative gesture. "I cannot, Laurence. It would be ungrateful to poor Grizzie; as if I were in haste to forget him. No, I must stay here with Martha, until something is discovered—"

"Nothing ever *will* be discovered," said Royston abruptly. Is it probable? every search has been made,—and besides, there is no trace to go upon."

"No matter; I can *wait*, as Martha says. The day *must* come." Adie spoke with a quiet assured confidence, which annoyed Royston excessively. He was in earnest to carry his point, and tried on another tack.

"My darling," said he, in his most dulcet voice, "how are you to exist?"

Adie made no reply to this question, but the hot tears gushed to her eyes at the insinuation it conveyed. Laurence gave the impression time to sink into her mind; but when she spoke at last, it was very differently from what he had anticipated.

"I can work when I will," were her words; "and if you leave me, Laurence, it will be all I shall have to think of."

"But how can I leave you, Adie? You know I cannot; you know I never shall."

The humid lustre disappeared from the girl's eyes, and a shadowy pallid smile came back to her lips.

"Let me take you away for a few months," persisted Royston, "to some pleasant sea-side village, where you may regain your strength and tone. Afterwards, if you are still bent on returning to Nevil's Court, I promise you faithfully that you shall do it." Adie shook her head. "I have another plan. Let us go to the south of France—to your father and mother's country, to your own birthplace; O, that is beautiful! Listen, Adie: it is a warm, soft, sunshiny country,—warm and sunshiny as your heart and face were the first time I saw you. I must have you look as you did then—all spirits and beauty."

The temptation was very great; her resolution began to waver. "And you would bring me back, Laurence, whenever I thought I must come."

"Yes, Adie, I promise it by what I hold most dear—by our mutual love." She was satisfied.

They were to be married in a few weeks, it was agreed; for Adie had now no protector but Laurence, and he urged the uselessness of delay. On the eve of her wedding, she lay awake long, and many times during the night she roused herself up to listen for the footsteps which she fancied she heard in the corridor; but when she bent her ear attentively to the sound, it always resolved itself into either the creaking of a door or the sighing of the wind amongst the trees. Mrs. Parkes as well as Martha were in the room with her; the first sleeping in an easy-chair, the second keeping watch with an open Testament before her, which had been her master's gift. Spread out on a long couch at one side of the chamber, were the bridal clothes: black, all black; Adie would wear nothing else. Martha glanced from her book to them, and from them to the girl, who had fallen into an unquiet sleep, and lay moaning as if in pain. A strange suspicion darted into her mind, and fastened there beyond her power to expel it, though she tried to do so. She fell into a reverie which lasted some time; then she went to the wardrobe, and opening a drawer where her mistress kept her little valuables, proceeded to turn over its contents carefully. There was a shrivelled stalk with a few colourless crushed leaves and petals clinging to it still. It was not of that she was in search, and it was laid cautiously aside to be replaced. At last, from the further corner, she drew forth a glove of dark leather; a left-hand glove, smelling of gunpowder, and with a stain upon the forefingers as if they had clutched something wet with blood. Martha paused doubtfully. Should she abstract it at once, or wait for some link of connection? It proved nothing; she turned it over and over, examined its make and the name of the manufacturer inside, and registered its appearance in her mind; then it and the other articles were laid back cautiously, and she returned to her place. Her countenance was full of heaviness, her eyes of gloom; she peered restlessly around, but avoided Adie's face, and fixed only on the funeral-wedding garments. She was debating a point in her own mind,—thinking of the kind master who had saved her, and who loved the sleeping girl like his own soul,—what to do. All at once there came over her troubled spirit a long-forgotten sentence: "Vengeance is Mine; I will repay, saith the Lord." To Him it shall be left, then," said Martha, as if answering a voice that had spoken with her, and she addressed herself again to her reading in more tranquil mood.

The first sound that Adie heard when she awoke at dawn was the dashing of heavy rain and hail against the glass, and the loud hollow roar of a tempestuous wind. The weather had changed since the night before; and when she rose, she shivered with cold from head to foot. Mrs. Parkes told her that Laurence Royston had come, and was waiting for her in the next room; therefore she made haste to don her sombre robes, and went out to him.

He started when he saw her, and exclaimed, in a tone of mingled surprise and reproach, "Adie, why this unseemly dress? You might give me your thoughts for to-day at least."

She coloured slightly, but repressed the tears that sprang to her eyes as she answered, "Laurence, I dare not pass by poor Grizzie's grave decked out gaily; it would be cruel. I could not do it."

Royston uttered an impatient ejaculation; then, seeing how deeply she was pained by his displeasure, and softened too by her exceeding beauty, he took her hands in his, and said he would try to forgive her; but it was hard that she should place any thing before him then in her heart. She could neither smile nor brighten; she even shuddered as his cold fingers clasped hers, and tried to draw them away. They were standing on the hearth, and she had just looked down on the floor. She saw, or fancied she saw, upon the oak the murderous stain, and started away. A slight spasm convulsed Royston's features for a minute; he looked up, and he observed Martha watching them furtively from the chamber-door. When she perceived herself detected, she disappeared. In an instant he was himself again—calm, resolute, and self-possessed.

He had attired himself in a rich new suit, with ruffles of fine foreign lace at the hands and breast, and looked, as Mrs. Parkes observed, a very "sightly man." Though it was the mode of the day, he wore no powder, but had his tawny hair in its natural waves and hue. He looked from himself to Adie, thinking that, if he could have suspected her whim, his dress should have accorded more with hers; but there was no time for any change then. Matters were compromised, however, by throwing over his gay coat a long dark cloth cloak, which, in that inclement weather, looked more suitable than finery. St. Barbe was the only person who accompanied them; and when he reached the court and saw Adie, his astonishment and remonstrances exceeded Royston's. He would scarcely let her go; he said the rain was a bad omen, but the mourning garments were worse. She was not, however, to be stirred from her purpose; and the old Frenchman reluctantly yielded to her fantasy, but with many a shake of his head, and many a muttered prognostic of evil.

They were married at St. Mark's. Probably a stranger bridal party never entered the ancient church of the Friars. People gathered, as they always do on such occasions; but they looked as solemn as if they were attending a funeral, and whispered to each other about the incongruous appearance of the bride and bridegroom; for Royston was flushed and nervous, and Adie stood like a statue, and went through the ceremony mechanically. It was a singular sight; the gossips of the parish long remembered that marriage, as well they might; for it is not often such a pair come to be "joined together before God." When they emerged from the church-porch, the little children were all mute; either the pelting rain had subdued their spirits, or else they felt that their shrill gratulations would be out of place. In passing Grizzie's grave, Adie suddenly stooped down, and snatched a handful of the wet grass which grew upon it, and thrust it into her bosom. Royston thrilled, and whispered a remonstrance, to which she gave no heed. She was thinking of the poor old man, who lay there unable to bless her. Would he bless her from heaven? she thought; and her heart answered "No."

IX.—BY THE SOUTHERN SEA.

Adie was happy, for Laurence was never absent from her, and in his presence her mind ceased to revert to painful things. They lived in a species of ecstatic dream, for themselves and for each other, without a thought of the indifferent outer world. All around them was calculated to substantiate and maintain this dream—the soft warm climate, the romance-breathing country, and the lonely sea. They had established themselves in a little white cottage near the shore. It was enclosed by a shadowy old garden engirt by a low wall; and as they were strangers in a strange place,

their privacy was never intruded upon. The woman who acted as their servant, and to whom the cottage belonged, was as little unlike a machine as it is possible for a human being to be.

They had nothing to do all the live-long day but to stroll along the shore, watching the waves and fishing-boats, and the cloud-shadows flitting over the sea. Sometimes Laurence brought out his pencil and made a sketch of the attractive bits of coast scenery; but it was soon thrown aside for a pleasanter occupation,—teasing or petting or coaxing Adie, whose pretty coquettish ways and frank gaiety had returned with her health and glowing loveliness. There might have been but these two in the world from the manner of their life; they forgot every thing else in their selfish happiness, and took their enjoyment in the swift present without one prescient forward glance.

Were they fools or wise? Moralists say the present alone is certain. We will allow, then, that they were wise with the wisdom of to-day in their fool's paradise.

They had been out in a boat on the sea all the summer-day, and at sunset they were together under the vine-covered veranda of the cottage, both weary and both silent. It was a luxurious calm. In the small terraced garden, the slender-leaved acacias swayed slowly and noiselessly in the air, as if courting the sunbeams to toy with them a little longer; a voluptuous mingling of rich flower-odours suffused the atmosphere as with perfumed sighs of regret for parting day; while the sea blushed red and creamy rose as the lordly sun sank down upon its swelling bosom. On Adie's face there was the peace of full content; her soul expanded in the genial air of her own land, while her heart was satisfied with Royston's love—not *love*, perhaps, so much as passionate worship. There is no saying how it might have stood the tests of time and custom; but the present was sufficient for her—if it would always have stayed. There was no doubt in her mind that it could ever be otherwise with them; that Laurence would ever be otherwise than tender, or she otherwise than fond and foolish for his dear sake. No words can fitly describe her rapture, her enthusiasm of admiration for him; he was her god. The old affectionate gratitude for Grizzie was, in comparison, as a faint moonbeam to a tropical sun. Her southern heart set no stint to its idolatry; if her life could have profited him, she would with exquisite happiness have exhaled it in sighs upon his lips. He knew it, and he paid her for it in such coin as he had to give; not in the virgin gold of an unselfish first love, freshly coined in the mint of a good true heart, but with a specious counterfeit which would last its day, and pass undetected if it were not tried in the furnace, or subjected to long wear and tear. He *thought* he loved her; and so he did, at least as well as he was capable of loving. But is there any thing left in the hearts of these cynical calculating men after a dozen years of fighting against the world, and of being conquered by their own passions, that is worthy of the name—worthy of love like Adie's?

She was happy, and that is perhaps enough. Whether her happiness arose out of her own purity and confidence, and faithful generous heart, or from Laurence Royston, it matters little; the results were the same, and one could not wish her, if deluded, less blind, since her delusion stilled every longing, and filled every hope, and realised every day-dream.

They sat together on the old stone steps of the highest terrace, with the clustered green of the leaves and grapes about and over them—a pretty picture daintily set. Adie had given up her mourning dress, and wore instead a mist-tinted gossamer-like thing, which draped her gracefully enough; her glorious hair was wreathed all round her head in a coronal of thick glossy plaits; and drooping over her long colourless neck were some sprays of scarlet and white blossoms which Laurence had just fastened there, more with a view to his own artist-taste than to imperative fashion. He sat now a step below her, resting one arm against her knees, and his head on her shoulder; she was singing to

him in her sweet liquid voice one of those favourite French airs which she had remembered since a child, and the tune chimed melodiously in time to the ripple of the water below the garden-wall. It was something about having a hundred hearts to love with, and filling them all with one image; a hundred eyes to gaze upon one face; a hundred tongues to speak the praise of one, and so forth. Having reached the third stanza, Adie stopped, and passing her hand lightly over Laurence's head, asked if he were asleep, that he was so still. He looked up in her face with an expression which betrayed that, if the old serpent Care had not stolen his way into her Eden, he had found *him* out even in her arms. It was but a momentary shade, however, and passed before she could say that it was there.

"Adie, your existence ought to be all sunshine. Tell me how I am to keep the clouds away," said he, idly caressing the hand which had crept into his, like a tame bird to the hand of its feeder. "We cannot be children always; there are red tints amongst the leaves, and some of the flowers look as if blight had breathed upon them; what is coming to us?"

"Autumn and to-morrow," answered she, with a light laugh; "autumn by the frosted leaves, and to-morrow because to-day is almost gone; I see nothing else. I am glad we came here, it is such a lovely place; and when we go home again, I shall carry it away in my memory, where it will be like a beautiful picture to be looked at whenever I will, by the light of my love."

"Why not stay here always?" asked Royston, glancing away from his wife; "it is far more pleasant than what you call home. I am not rich, but I have enough to live as we do now,—enough and to spare. What can you desire more? What a little, restless, dissatisfied heart it is! not content with what she has, she thinks to run to and fro between this paradise and that abode of shades yclept Nevil's Court."

"I must see it again. I am afraid sometimes Grizzie may think I have given up remembering him," said Adie, with a grave air. "I can just see the old room at this minute, where Nicholas used to sit at work, and where I used to thread my needle by the window, until *somebody* came with a dignified step up the stairway. You never ran, Laurence; and now I remember it, you never laugh aloud. How strangely my thoughts run on from one thing to another!—don't they?"

"Yes, Adie, you have some strange conceits. I think you come of a nomade race, for you are erratic in fancy, and if I do not take heed, you will be erratic in body too; you have a taste for wandering, or you would content yourself in this little nest."

"But Grizzie, Laurence?" said Adie, in a tone of soft reproach. "Think, if you lay buried in that gloomy old churchyard where the children play about, whether you would like me never to come to look at the mound over you. I should feel sad in heaven if I knew *you* had forgotten me. In my grave I think I should know your footfall from others that would pass, and I am sure your very shadow would warm me in my cold bed when it was cast upon it. And Grizzie loved me, Laurence."

"And I love you, Adie."

"Yes, but it is not the same. I had grieved him; I can never tell him any more how sorry I am; but you, I can put my arms about your neck and kiss you,—so, and so,—and you hear me and are pleased. Laurence, I must go back to Nevil's Court."

"Some day, sweetheart, some day; but not yet." He put his arm round her, and drew her down to his breast. "Adie, do you think we shall love each other as well at Eversley?"

She looked at him in surprise, and asked, "Why should we not?"

"Because we shall have more difficulties there than we have here," he made answer. "Here we live for each other—to enjoy our life, to be happy; there, I must work at the

old craft, and be careful and watchful. It will seem another world almost."

"O, Laurence, we carry our sunshine with us, do we not? We are independent of times and places, being together."

He did not reply, but twitched the leaves unconsciously from a spray which fell over him.

"Why need we care for being poor while we love each other?" Adie went on caressingly. "I have never been used to luxury until you brought me here. And would *you* never weary for change?"

"Never with you, my darling, never!" said he, with tender earnestness. "Adie, let us keep our summer-day as long as it will stay with us. It will be time enough to think of flight when the necessity for change shows itself in our weariness of each other. I shall think you tire of me if you want to get back into the old life so soon."

Adie wondered how Laurence dare breathe such a suspicion; she did not think she should forgive him, at least not yet; but she added, with a kiss, to show that she was not tired, or tiring, or ever likely to tire, she would give up all thought of going home for the present.

"I wish you would not call Nevil's Court *home*," said Laurence, with a slight tone of annoyance; "your home is in my heart."

She promised not to offend again; and the memory of poor Grizzie being set aside once more, Adie returned to her song, and Laurence to his private thoughts. Mean time the sun had gone down; even the red reflection on sea and sky had vanished, and the landscape was overspread with a solemn tint of gray. With a continuous moan, the south wind came over the waves, which kept up their slow sad symphony without pause; the vine-leaves stirred and rustled softly till night came down upon them with its dusk silence; darkness there was none, for the moon arose, and the stars shone out upon the skirts of twilight till the day melted imperceptibly into night. And still Adie went on with her song:

"Si j'avais cent cœurs,
 Ils ne seraient remplis que de toi;
 Si j'avais cent cœurs,
 Aucun d'eux n'aimerait ailleurs."

Laurence rose suddenly, and clasping her in his arms, broke out, in a rich deep voice, into the refrain, which he had learnt from her frequent repetition of it:

"Ma mio,
 Ma douco amio,
 Réponds à mes amours;
 Fidèle
 A cote bello,
 Je t'aimerai toujours."

And with one long farewell look over the wide-spread prospect, they entered the cottage.

PROGRESS OF SCIENCE.

AMONGST the more interesting of recent topics, the advent of the United States steam-frigate, the *Niagara*, for the purpose of taking her part in the operation of laying down the submarine transatlantic cable, is prominent. Every body is anxious that the feat of committing the submarine whispering rope to its ocean bed, safe and sound, were over. Men of commerce are anxious, so are politicians; and people who have relatives in the far West, with whom they would wish to converse, are anxious; each and all, for reasons which will readily be understood. Electricians are anxious partly for other reasons; they are curious to know, by practical experience, to what extent the submersion of a conducting insulated rope under water will interfere with the passage of electricity through the same. Faraday, we believe, was the first who directed attention to the fact that, in consequence of known laws of electrical induction, the medium by which an insulated wire is sur-

rounded affects its conducting powers. Unquestionably the conducting power of an immersed rope is less than that of one precisely similar surrounded by atmospheric air; how much less only practical experience can determine. It is beside the point at issue to indicate the fact that the capability of transmitting electricity in one original stream, through a conducting cable sufficiently long to cross the Atlantic, has been demonstrated. Beside the question, inasmuch as the experiment was performed on land. We ourselves confidently believe the scheme of transatlantic electrical communication will be crowned with success; but we shall not be surprised to find that the rates of electrical velocity to which we have grown habituated, from regarding the operations of land telegraphs, or oceanic wires of inconsiderable length, will be somewhat modified by transmission of the current through so long a distance under water. Hardly less interesting than the cause of her mission is the monster frigate herself, which has been divested of her armament in order to render her the better adapted for stowing away the cable. In respect of her enormous Dahlgren guns, a daily contemporary publishes the statement, that they can project solid balls of 170 lbs. each. This is erroneous. Dahlgren's guns are exclusively intended for hollow shot; even with these, the recoil is very great, and the charge of powder small. *The Niagara, like the Merrimac, will not have one solid shot on board.* Apropos of guns and gunpowder, Mr. Bashley Britten querulously demands of the *Times* why the Government does not adopt his system of rifled ordnance. Simply, we should imagine, because the Government conceives Lancaster's principle to be superior. The fact is, that, amongst other disadvantages, Mr. Britten's projectiles, partly of iron, partly of soft metal, are so easily and so irretrievably damaged by the jolting of artillery-wagons, that the mere act of galloping some of them, carefully packed in shavings, over Woolwich Common, put the greater number *hors de combat*. They would no longer enter the gun. We have now in our possession one of the rifle-conoids devised by Mr. Whitworth; and by one of which the extraordinary perforation mentioned in the *Times* was effected. It would have been only proper had Mr. Whitworth stated, that his new projectiles are *not made of lead, but a sort of hard pewter*; a material which is totally unadapted for military service.

At the Society of Arts, an interesting paper was read, on the 13th of May, by J. B. Smith, Esq., M.P., on the cotton supply. Premising the importance of our cotton manufacture to be evidenced by the fact, that, after supplying our own wants, our exports last year amounted to 38,284,700L, the lecturer drew attention to the consequences of an interruption to our importation of cotton from existing sources. Seven-ninths, as near as may be, of the total amount of cotton imported, come from the United States; practically, therefore, we may be said to be wholly dependent on our transatlantic neighbours for this necessary article. The idea has gained ground, rightly or wrongly we cannot say, that the culture of cotton in North America can only be successfully prosecuted by the aid of slave-labour. If, therefore, that system should be abolished,—a consummation to be ardently desired by every philanthropist,—a branch of manufacture involving a sum no less than one-third of the value of our total exports would be—present appearances alone regarded—ruined. During the last ten years the increase in the consumption of cotton in Great Britain has been tenfold; the consumptive has, indeed, now overtaken the productive power. Many of the old sources from which we received cotton have been so completely thrown out of cultivation, and devoted to other purposes, that it is futile to look to them for any addition to our present supply. Amongst the fields of cotton production which have already, in some degree, answered the expectations entertained, Western Africa furnishes a pleasing example. Philanthropists have long foreseen that the most effectual means of striking at the root of the African slave-trade would consist in so increasing the value of negroes that their exportation would

be no longer profitable. Actuated by this conviction, Mr. Thomas Clegg, of Manchester, some years since, supplied two missionaries on the west coast of Africa with seeds of the cotton-plant; the missionaries on their part furnishing the seeds to the native chiefs, explaining the mode of culture and preparation, and assuring them a certain market for as much cotton as they might be able to produce. All the cotton which Mr. Clegg could obtain from his newly-made cotton-growers the first season was about 235 lbs. The following year, however, he obtained from the same source 14,000 lbs., and the third year, 30,000 lbs., showing a ratio of increase which is encouraging. Adverting to India as a source of cotton supply, Mr. Smith spoke of the extreme fertility of India as a myth; it could be fertilised, however, by irrigation; which being accomplished, and means of transit found, cotton might be grown there adequate to our wants, for aught that climate or physical condition hinders. But the existing tenure of land in India would still be a vast obstacle; except in Bengal, no person, native or European, can own in fee simple the smallest tract of land.

M. Babinet, the French astronomer, who has so completely set our minds at ease respecting any fear of shock from the impact of a cometary body against our globe, is now engaged in determining, and reducing to mathematical expression, the power of comets to obstruct luminous rays transmitted through their substance. It will be seen on reflection, that the point to which M. Babinet is now directing his attention, if once satisfactorily made out, will inform us concerning the mass of comets themselves. The investigator confirms, by his own train of reasoning, the proposition already laid down by Sir John Herschel, Struve, Admiral Smyth, and Arago, that the density of comets must be, so to speak, almost nothing; amazingly less dense than the rarest gaseous body known to us. The process of reasoning by which the astronomers above indicated arrived at this conclusion was founded on their inability to appreciate any refractive power exercised by the nucleus of a comet even; far less its tail. M. Babinet, in following out his investigations relative to the influence of cometary matter on light transmitted through it, awards the credit of appreciating this fact to Sir John Herschel. The French philosopher remarks, that when Herschel first intimated that the whole ponderable matter entering into the tail of the comet might, after all, only weigh a few ounces, the number of the incredulous on this point was pretty nearly equal to the number of those who read the announcement; but it would seem now that Herschel's estimate may have been over, rather than under the mark. In relation to the density of atmospheric air, M. Babinet supposes the density of cometary nuclei to be correctly represented by a fraction having so many figures in its denominator that our column will not contain them. Suffice it, therefore, to state, that the fraction would be 1 for the numerator, and for the denominator, unity followed by no less than 125 zeros!

M. Babinet finally asks how it can be, if cometary matter is thus attenuated, that it is luminous; promising an answer to the question, or at least a probable hypothesis of the phenomenon, at a future time.

At a recent *séance* of the Paris Academy of Sciences, M. J. Lefort submitted the records of his late experiments on the chemical composition of edible truffles. The truffle constitutes such an important item in the modern French *cuisine*, that no wonder our allies should try to learn by chemical analysis what are its components. Omitting a detail of the long list of constituents discovered in the truffle, we select the following points as not being devoid of popular interest. Truffles, in common with mushrooms, contain that variety of sugar called *mannite*, but combined with bimalate of lime. Black truffles are devoid of pectine at every period of their growth, but white truffles contain a little whilst they are unripe, though it disappears at a later period of growth. Parmentier, celebrated for his successful endeavours in causing the potato to be cultivated in France, long since indicated the existence of one or more acids

in truffles. M. Lefort individualises these acids as the citric and malic. Fumaric acid, however, does not appear to exist in truffles, though it can be extracted from edible mushrooms.

Photography has sustained a deep loss in the death of Mr. Archer, the gentleman so well known as the discoverer of the collodion process of photography. To the family of that talented operator the loss is still more serious; assiduous application to his own branch of science having occupied the whole of his time more beneficially to the community than to himself and family. In point of fact, the family of the deceased is totally unprovided for. Her Majesty, however, has headed a subscription, originated for their behalf, and bequests are falling in; so that eventually it is to be hoped a moderate provision may be made for the bereaved family of one to whom photographic science owes so much.

At the *séance* of the Paris Academy of Sciences, on the 12th ult., M. Eugène Poligot communicated an interesting note on a fragment of ancient wood obtained from the marine quay of ancient Carthage. Much of the pile-timber which entered into the construction of the Carthaginian pier is still *in situ*, so far as its foundations are concerned; though the masonry to which it gave support is detached. The piece of wood which formed the subject of M. Poligot's memoir was obtained by M. Guyon, a medical inspector in Algeria. Seeing it project from the sea, still in apparently good preservation, he broke it off with his foot, and forwarded it to Paris, with a view of ascertaining to what process, if any, its long preservation was due. Pliny informs us that the Carthaginians, like the Babylonians, employed resinous bodies as a cement for building purposes; and M. Guyon imagined that he could discover some remnants of bituminous matter in the piece of wood under consideration. Inasmuch as Carthage is believed to have been founded in the year 860 B.C., the specimen of wood has been probably exposed to the action of the sea for more than 2600 years; nevertheless it seemed to resemble ordinary wood, both in colour and in texture,—wood in a good state of preservation. M. Decaisne, having examined the specimen attentively, finds it to be a resinous wood of the family of *Coniferae*, probably a species of pine or larch. The absence of spiral vessels, and the well-marked punctuation of the woody fibres composing it, remove this question beyond doubt. M. Decaisne arrives at the conclusion, that, except the wood be that of the pine of Aleppo (*Pinus Alepensis*), or of cedar, both of which grow spontaneously in the mountains of the north of Africa, it was probably obtained from the mountains of Bætica (Andalusia), Corsica, or Sardinia. The Pyrenees or the Apennines might also have contributed to the wood-works of ancient Carthage. As regards the preservation of the wood, this seems to be more apparent than real. When the minerals derived from the ocean by long absorption were extracted from it by proper solvents, the wood crumbled under the touch, and was easily disintegrated. Altogether it might be rather denominated a specimen of semi-formed or imperfect lignite than of perfect wood.

At the meeting just adverted to of the Paris Academy of Sciences, *i. e.* May 12th, a letter was read from Marshal Vaillant, calling attention to a new and seemingly very effectual means of freeing stores of corn laid up in granaries from insects and insect-larvæ by means of anæsthetic fumes. The fact has long been known to entomologists that numerous strong-smelling bodies were extremely fatal to insects. Butterfly-hunters have been long in the habit of employing vapour of turpentine, ether, prussic acid, &c., to destroy life in the objects of their search without interfering with the beauty of the latter. M. L. Doyère, the gentleman on whose behalf Marshal Vaillant acts as master of the ceremonies, turns the insecticidal properties of anæsthetic agents to still better account, *i. e.* to the destruction of insect-life in accumulated grain.

To this end, ether and chloroform may both be used; but the anæsthetic which M. Doyère prefers is bisulphide of

carbon; a liquid whose smell is abominable, but which, owing to its extreme volatility, so little contaminates the grain, that animals show no reluctance to partake of the latter immediately it is turned out from the granary where it had been exposed to the fumigating process. The quantity of either sulphide of carbon or of chloroform necessary to the process of M. Doyère is inconsiderable, two grammes of the anæsthetic per metrical quintal of corn being amply sufficient. Another point, in addition to insect destruction, M. Doyère communicates. It is this: grain treated by his anæsthetic process no longer shows any tendency to heat when collected in large bulks.

Mr. Christopher Binks has very recently (29th ult.) brought under the notice of the Society of Arts some combinations and phenomena that occur among the elements engaged in the manufacture of iron, and in the conversion of iron into steel; the general object of which is to show that the long-received notions as to the distinctions between steel and iron, wrought and cast, are fallacious, and that carbon alone is not, or rather probably is not (for Mr. Binks expresses himself hypothetically on this point), competent to the formation of steel. He believes nitrogen to be essential, and he advances many plausible reasons in support of the opinion. Not a little curious, indeed, is it, that notwithstanding the use of carbon is ostensibly alone employed in varieties of steel manufacture, nevertheless the simultaneous presence, if not operation, of nitrogen is also involved. The operation termed "case-hardening" furnishes a prominent example, consisting as it does of the employment of ferrocyanide of potassium; into which a heated piece of iron being dipped, the surface of the latter comes out changed into steel. Even the ordinary cementation process, which involves the continuous heating of iron bars with charcoal, is not repugnant to what we may term the "nitrogenous" assumption; inasmuch as nitrogen invariably exists between the interstices of the charcoal and the bars of iron. It must be mentioned, that the idea of assigning a specific function to nitrogen in the steel manufacture was entertained some years ago by Schaffhäutl and Marchand; and, indeed, nitrogen has often been found in steel by chemical analysis. Observers, however, have perhaps too complacently regarded the nitrogen as a mere collateral impurity; and continued to describe steel as being a mere carburet, or as some modern chemists will call it, "carbide," of iron.

ROYAL ACADEMY.

[Second Notice.]

As is frequent with Mr. Millais, his large picture expresses more than meets the eye: it is entitled, "A Dream of the Past: Sir Isumbras at the Ford." Sir Isumbras was a knight of the old days, who, endowed in youth with all earthly happiness, forgot the Giver, and rejoiced in prosperity and glory as his rightful due. There was something good about this lord, or it was needful that one so notable should be used as an example. He was therefore not allowed to run on until the end in his own course, or cut short off in the pride thereof; but unceasing trouble fell upon him, and years on years of pain and effort and anxiety passed over his head, until, becoming humble and purified, he saw the law he must obey, and became a Christian knight, in the romancer's idea of such a personage. Quite in the evening of his life, when things ran fairer with him, happened the incident of the picture. He was riding through a pleasant country, upon his gigantic war-horse, "The Graund Destriere;"—as with his life, the torrid day was drawing to its close, and all the landscape burned with misty dull purple and red,—for autumn was far advanced,—when two children, who had been gathering sticks in the woods, appealed to him, the ancient knight in the gorgeous gold armour, that he would carry them over the stream there running by: He hove one of them on to the crupper and the other on the saddle-bow, and, lord and knight as he was, bore

them in that wise over the water. This is the picture: the old knight, war-torn and victorious through a life of trouble, smiles with a grim happiness as,—looking athwart the sheeny waters on to the purple-lighted hills and twilight sky of green and gold, full of the mellow glories of the setting sun, and into the deep embrowning woods burning with autumn fires,—he sees an emblem of his life and death, and recognises the hand of God in his trouble and his pain. The girl, who sits in front, is quite awed with the glory of his armour and the nobleness of the spirit in his aged face; the boy, on the crupper, clings more confidently. Any thing more admirable than the expression of the three faces it would be impossible to think of even; equally glorious is the magnificent background in colour, in design, and in naturalness. There our praise must stop; for any thing more lamentable than the way in which the really astounding beauties of this picture have been put together it would be equally difficult to conceive. Every thing is singly complete and perfectly wonderful in conception and execution; but every thing is out of keeping with the neighbouring objects, and with the picture as a whole. The golden armour (perfectly golden and marvellous) is golden armour which has stood in a studio catching the dust until it was painted, not golden armour which reflected the green and luminous sky and flashing water; and the horse, who paces through this, is indeed a monstrous steed, whose skin is more like shoe-leather than horse-hide: he wades on without causing a ripple. Monster as the horse is, we might pardon such a thing as mere exaggeration on the romance, or at worst an oversight, remediable by repainting; but the most dreadful part of him is, that he is a stupid, long-backed, small-shouldered brute—a magnified cab horse, in truth, and the farthest differing from the "Graund Destriere" it is possible to imagine. It is necessary to apply other rules of criticism to Mr. Millais than we should dream of doing to many of the works here or elsewhere, because from him to whom much is given much shall be required. If we judged in this way of pictures in general, all criticism would seem vituperation or full of sneers and sardonic laughter. Into what picture shall we look and find no disproportions, no falsity of light and shade? does every artist heedfully consider the relative appearance of the objects he paints? how many painters could produce those three heads, or the truth of the evanescent effect of that background? how many get such colour and such force as are throughout this marvellous picture? It is because he has done, and can and ought to do so much better, that we set ourselves to denounce the faults and follies of this great work, while reverencing to the utmost the glorious talents whose magnificent decadence it seems to threaten.

No. 408, "The Escape of a Heretic, 1559," is perhaps the least satisfactory picture Mr. Millais has painted; being, for him, deficient in colour, and one of the figures, the monk, out of all proportion; its want of finish, too, is lamentable. Of course the design is masterly, and the woman's face, if we conceive it in repose, beautiful; the man, who is uttering a long sibilant, has that expression given most admirably.

L. L.

FLOTSAM AND JETSAM.

A CORRESPONDENT writes: "The correction of a small error may sometimes lead to the prevention of a great mistake; therefore I venture to point out one of the former, which appears in page 294, vol. i.

"You say the word 'garotte' is borrowed from the French, for which latter word read 'Spanish,' from whom the French got it, as is shown by the following extract from a Spanish-French dictionary: 'Sp. Garrote, *sm.* garrot; *supplice où l'on étranglé avec un collier de fer.*' It is, as you are probably aware, the mode by which criminals are executed in Spain. The criminal is seated on a convenient stool, to which is attached a square post, against which his back

rests. Against this post the fulcrum of the screw is placed, the collar is passed round the neck, and one turn of the handle produces instantaneous death. The collar is removed, and the head being fastened in its position by means of a cord round the neck and the post, the malefactor is left for an hour as a public spectacle. I was once obliged to witness the execution of two men at Vittoria, and was much struck with the remark of an Irishman who was also present, and who, in passing by after they were tied as above described, remarked, 'They look like two gentlemen going to be shaved.' A contrast truly to our disgusting system of making men 'dance upon nothing,' with their convulsive throes, and swaying to and fro in the wind. If public executions must be, the easiest, most certain, least disgusting practice should be followed, and that I have no hesitation in saying is the 'garrote.'"

E. P.

IN MEMORIAM.

A BRIEF time has passed since DOUGLAS JERROLD was taken from us; and the interval, though it has not mitigated our grief at the announcement, enables us with more calmness to reflect upon our loss.

At the close of last year (little aware of the sad interest that would soon attach to it) we presented our readers with a portrait of Mr. JERROLD, and with a brief summary of his literary services. We have nothing to add in the way of information now; but we may well be permitted to recur to some points of his character with the new "phrase and emphasis" of our present sorrow.

It is not only that we have lost in JERROLD intellectual gifts unsurpassed of their kind,—the play of fancy, the mastery of controversial weapons, the power of felicitous epigram, that condensed a truth into a line, and minted the wealth of thought into a coin that became at once current through the land; we have also to deplore a man of fervent sympathies and undaunted courage; one who never failed the right because it was weak, or paltered with injustice because it was powerful. We miss an unaccommodating and unbribable truth-teller in a courtly age; we miss a satirist whose invective had its source in "the hate of hate, the scorn of scorn, the love of love;" whose keen arrows flew from his heart-strings.

There is no more honourable trait of intellectual life in our times than the uses to which it has applied wit and humour. When we recal the scorn evinced by WYCHERLEY, FANQUHAR, and CONGREVE for all that is healthy in principle or generous in feeling, the virulence of SWIFT, and, in later times, the purposeless brilliancy of SHERIDAN, we may well respect those contemporary wits who have turned vice into ridicule and made heartlessness contemptible. It is needless to say, that in this brotherhood DOUGLAS JERROLD held a foremost place. He contributed materially to the high tone that now prevails in our literature. The fine spirit was touched to fine issues, and the influences which he aided by his life will be his enduring bequest to the future.

POLYGLOT READINGS IN PROVERBS.

NOTHING SHOULD BE DONE IN HASTE EXCEPT CATCHING FLEAS. "Haste makes waste." "The more haste, the worse speed."—This is derived from the Latin adage, "Haste is slow,"—*Festinatio tarda est*, as causing imperfect work, blunders, and omissions. "He that rides ere he be ready wants some of his gait," that is, leaves some of his accoutrements behind him. Therefore "It is good to have a hatch before your door," in order to check such unprofitable haste. A favourite saying of the Emperors Augustus and Titus was, *Festina lente*, "Hasten slowly," which Erasmus calls the king of adages. The Germans have happily translated it *Eile mit Weile*; and it is well paraphrased in that saying of Sir Amyas Paulet, "Tarry a little, that we may make an end

the sooner." A thing is done "Soon enough if well enough" (Latin),—*Sat cito, si sat bene*. "Quickly and well do not fit together" (Italian),—*Presto e bene non si conviene*.

W. K. KELLY.

THE FAMILY COIN-CABINET.

New knowledge is new pleasure. Thus every new source of information opened up, even among the pursuits of leisure-hours, increases our capacity for enjoyment. Shortsighted theorists have often mooted the axiom, "we can but be happy," and suggested that the ignorant savage is as capable of experiencing the sensation of complete happiness as man in his most highly cultivated state. But this sophistry may be well answered by the images of the small cup and the large; both may be full, but the larger holds more than the smaller; just as the mind enlarged by culture is enabled to receive a greater number and greater variety of pleasing impressions than that which remains limited to the narrow circle of merely its own natural perceptions.

The knowledge of a few details of structure, and of the botanical names of some of our native plants, imparts an entirely new zest to a ramble in the fields. A little learning in the matter of engraving, its origin and history, opens up at once a variety of new interests to the aspect of an old print; and so a little elementary knowledge concerning the true character of coined money, its origin and history, make a little hoard of old coins a very mine of delightful and curious knowledge; instead of remaining merely a box of "bad halfpence," "old-fashioned shillings," or "nondescript pieces," to which no designation is attempted but which are vaguely termed "curious." The little collection, illuminated by ever so small and twinkling a light of knowledge, becomes a vividly-illustrated page of history, full of associations of a peculiarly attractive class, and of a character not found in any other kind of historic monuments.

In order to define more clearly the kind of pleasure and instruction to be derived from a little knowledge concerning coins, it will be necessary to show briefly how comparatively recent is the use of coined money, and to state, in a few words, what is known relating to the methods of simple barter, and also of exchange by means of uncoined metal, which preceded the epoch at which coins were introduced, and then to describe the earliest forms and general characteristics of the first examples of a true system of coinage.

The simple barter of one object for another must have been superseded at a very early period, and the substitution of a circulating medium of a certain and fixed value adopted, somewhat analogous to the system of modern money. It was thus that bars of salt, strips of leather, certain kinds of shells, such as cowries, &c., were used as representatives of the value of objects of ordinary barter; and in some countries they continue in use at the present day, more convenient forms of money being still unknown. As an illustrative instance, I may mention that Dr. Barth, in his recent travels in the interior of Africa, found the national currency of the province of Kano to consist of cowries; a form of money so cumbrous that it required a camel to carry the value of 12*l*.

In some of the civilised countries of Asia, however, the more primitive kinds of money were replaced by a rude sort of metallic currency at a very early period; but it was a currency passing by weight, and not by tale, as with true coins. One of the earliest of such money transactions on record is that in which it is related that Abraham weighed

to Ephron "four hundred shekels of silver, current money with the merchant," in payment for the field of Machpelah.

There was also another kind of money, not in mere bars or ingots, but in the form of jewels, which were adjusted to a certain weight. Such are the jewels mentioned in Genesis as given by Abraham's servant to Rebekah: "The man took a golden earring of half a shekel weight, and two bracelets for her hands of ten shekels weight," &c. Beyond this kind of currency the Jews did not advance until a very late period (long after other nations had adopted a true coinage*), at which time the name and quantity of the ancient shekel-weight was given to the coins they then issued.

It is to the Asiatic Greeks, or their Grecianised neighbours, the Lydians, that we are indebted for the invention of true coins, that is, pieces of metal of ascertained purity, adjusted to a certain weight, and stamped with a national signet,† by which both the weight and purity of the piece were solemnly guaranteed by the state. This step seems now a very simple one; and yet the advance made by it in establishing a convenient and manageable form of currency, instead of the cumbrous forms of "weighing" and "testing" at each payment, was one of the greatest ever effected at a single bound. But this leap was a very late achievement. It was not, in fact, till so recently as about seven or eight centuries before the Christian era that a true metallic currency, as we now understand the term, was established. About that time the Asiatic Greeks, or, as Herodotus tells us, the Lydians, invented the first true coins—the direct parents of all future currencies based upon the precious metals. Gold, it appears, was coined before silver, each piece being termed a *stater*, from being adjusted to a certain standard weight, which that name implied.

The first coins thus struck were exceedingly rude in form and workmanship, as we may see by many examples still in existence; but the metal was of the highest degree of purity, and the weight adjusted to the greatest nicety. The gold coin engraved below is supposed to have been struck at Miletus in Ionia, the head of the lion being the national emblem of that state. The kind of archaic art displayed in the device, and the rude punch-mark on the reverse, belong to the earliest epoch of true numismatic history, and prove the monument in question to be one of the earliest positive coins ever struck. Its appearance at once suggests the origin of the English word "coin," which is evidently derived from the Latin *cuneus*, a wedge or punch; and more immediately from the French *coigne*, the name of the instrument by which the piece of metal was still, in comparatively modern times, forced into the die from which it was to receive the impress of the device. It will be seen

A gold coin of Miletus in Ionia, struck about 700 or 800 B.C.

that the first coins had a device on one side only, the reverse being simply marked by the indent of the coining-punch.‡

The following illustration will show the next step in the treatment of the reverses of primitive coins. As the Lydians, or Asiatic Greeks, were probably the first to coin gold, so there is good reason to believe that the Greeks of the island of Ægina were the first (about 650 or 700 B.C.) to coin silver. The example below is not one of their earliest coins, but one which will show, as desired, the next advance in the treatment of the reverse, in which the punch has been made to mark four tolerably symmetrical squares, instead

* The epoch of the Macabees, about 144 B.C.

† The act of sealing, or stamping with a signet was considered a very sacred act in the East.

‡ There are examples of coins of other Asiatic colonies and cities of the Greeks of equally primeval workmanship; and also of Sardis, the capital of Lydia.

of the mere rude indent of the first epoch. The device on the obverse is a tortoise, the national emblem, with the two

A silver coin of Ægina (a didrachma), struck about 550 or 600 B.C.

letters, A I, the initials of "Ægina," as the name was originally written, and which were probably introduced to distinguish the coins from those of some other state using the same or a similar device.

My next example, showing a farther advance in the steps towards a perfect reverse, as well as a more elaborate obverse, is a coin of Alexander I. of Macedon, the remote predecessor of Alexander the Great. In this example the four compartments into which the indent of the punch is divided are much more regular, and are surrounded by the name of the prince, ALEXANDRO,* which in Greek characters reads, ΑΛΕΞΑΝΔΡΟ, being, with the exception of that of Getas, king of the Edoucans, probably the first example of the name of a prince forming the legend of a coin.

Coin of Alexander I. of Macedonia, struck about 450 B.C.

The next example, which is the last I shall adduce to illustrate the gradual advance of the earliest coins towards the exhibition of a perfect reverse, is one of the city of Athens, of more recent date than that of the last-described coin, although exhibiting a more archaic style of art. The reverse displays, at last, a true device—an owl, the emblem of the city, and at the same time that of its tutelary deity, Athena, the Minerva of the Greeks, whose name was the same as that of the city itself. The reverse has in this example assumed all its importance, and, barring the rudeness of its archaic art, possesses the complete character of coins of more recent periods. The shape of the punch is, however, still allowed to form an indent round the device of the reverse, an imperfection which soon afterwards entirely disappeared. In addition to the national emblem, there are the three first letters of the name of the city, AΘΕ,

and also a sprig of olive, the cultivation of which, at that time, was the chief source of Athenian wealth. The helmet of Athena, whose head forms the device of the obverse, is also decorated with leaves of this plant.

Such were the first steps in the art of coining, and such the pieces, which, even in approximate value, were the remote parents of the sovereigns and shillings of the present age.

H. N. H.

* In the dative case, in the ancient manner, with O instead of Ω.

HINDA.

MR. WYBURD has again drawn upon his favourite subject, *Lalla Rookh*, for the theme of a picture, and shown, we think, a marked advance towards the more solid qualities of his art by the manner in which he has treated it.

The passage referred to occurs in the well-known story of the Fire-worshippers, in which Hinda, the daughter of one of the Arab conquerors of Persia, falls in love with a Persian youth, utterly unsuspecting that he is not only a Gheber, or Fire-worshipper, and therefore belonging to the very tribe her father seeks to destroy, but that he is the leader of the national party, whose name—*Hafed*—is a word of fear to his enemies. War breaks out; the Persians are defeated, and *Hafed* is driven to a rock-hold. At this time *Hinda* is sent out of the way by her father. He is attacked by the Fire-worshippers; she faints, and recovers only to find herself a prisoner,—still, of course, unconscious that her lover is the leader of the men she so dreads. This is the point of time chosen by Mr. Wyburd, and which is thus marked in the poem:

"Upon a galliot's deck she lies,
Beneath no rich pavilion's shade,
No plumes to fan her sleeping eyes,
Nor jasmine on her pillow laid;
But the rude litter, roughly spread
With war-cloaks, is her homely bed;
And shawl and sash, on javelins hung,
For awning o'er her head are hung.
Shuddering, she look'd around."

THE WATER-COLOUR SOCIETIES.

THE NEW SOCIETY.—TWENTY-THIRD EXHIBITION.

WE do not propose to ourselves any formal criticism on these exhibitions; we shall rather wander freely among their pictures, just as fancy may incline us, pausing only to remark upon those which especially attract our attention.

Here are several to begin with by Thomas Sutcliffe (a new name, we believe).—Nos. 102, 114, 190, 197, wherein the painter has studied nature with love and purpose. No. 114, "A Flood, from the Pickering Moors," shows a stream, swollen by sudden rain on the hills, rushing across a moorland scene. The colour of the water here is admirably given; and the visual force of the torrent, "resistless, roaring," is powerful. No. 197, showing a quiet green place, with sunlight through trees which overhang a brook, we cannot better describe than by its motto:

"I'll lead you where you may behold
What shallow-searching fame hath left untold,
Which I full oft, amidst these shades alone,
Have sat to wonder at and gaze upon."

This picture takes the observer to the spot. No. 340, "Wild Flowers," by R. Carriek, showing a girl walking through a wood in sunlight, is wanting in brightness of natural colour, which is the more to be regretted, as the little picture is very forcible, and exhibits a good firm feeling for design and light and shade. A strong reflection falls against the child's cheek with much purity and brilliancy; her dress is an exception to the deficiency in colour remarked upon, being executed with considerable vigour and variety of tint; a rare quality. No. 341, "A Study on the Beach at Deal," a large anchor lying on the shingle, is most exquisitely drawn, and the thick shell of rust, which has scaled off in parts, most perfectly rendered. Here, again, is a want of maintained tone of colour in the background.

Mr. S. Cook's "Entrance to Boscastle, Cornwall," No. 11, is a very capital sea-view, painted in the old-fashioned way, with light washes. The water is painted with much care and knowledge, being the best of its kind in the room. Although weak in colour, No. 23, "Hay-field," by W. Bennett, is effective. Mr. T. L. Rowbotham's drawings are extremely artistic: we may point out No. 99, "In the Marshes, Winter,"

as an excellent example. No. 104, "Bodiam Castle," J. W. Whymper, would be very interesting if the effect, rain coming on, were not so common; as it is, the dark moat surrounding the ruin, with its floating water-plants, is strikingly true. No. 123, "Love lightens Labour," J. H. Mole, a large picture, whose principal figures are a girl assisted by her Highland lover in carrying a load, is so good, that we regret the artist did not give a little more of the care which has produced so excellent a rendering of the texture of the dresses in perfecting the drawing of the girl's face, which is, however, very pretty and expressive. The same artist's picture, No. 136, "Near Dorking," is a very powerful and effective sketch of a farm-gate and cottages.

Mr. L. Haghe's "Guard-room," No. 329, is one of his usual artistic and skilful sketches, representing soldiers playing at cards. When will Mr. Haghe strike out a new range of subject? Fanny Steers' "Hatherly Farm" has much of the force and vigour of oil. No. 201, J. H. D'Egville, "San Clemente, Venice," a view from the water, is very sober and rich in colour. The reader will notice the observant way in which the shadows are cast upon the garden-wall from the trees which overhang it from within. The artist has most justifiably departed from the rule in making the sky darker than the water. Mr. Henry Warren does not sustain his reputation this year by the large picture of "A Street in Cairo, with Marriage Procession." The locality is of course picturesque; but what opportunities for rich colour and forcible light and shade have been missed! The procession itself is also tamely given. We should do the artist injustice by neglecting to point out the subdued and true feeling for colour which some of the suspended dresses, and other parts of the foreground, exhibit. "Near Redhill, Surrey," by W. Wyld, No. 294, a representation of a true phase of English scenery, is, despite its dinginess, one of the most powerful pictures in the room. "A Moonlight Walk," and "Fountain's Hall," J. Chase, are effective and clever studies, which will repay examination; as will No. 301, "Lilac and Bird's-nest," M. Margetty.

The conclusion we arrive at is, that this exhibition is below the average. The want of new life is lamentably observable; however, there are many pictures that, for want of space, are not referred to; and some others, which, although excellent, are so much in the manner of their respective authors, that it is really difficult to quote them as either new or interesting.

THE OLD SOCIETY.—FIFTY-THIRD EXHIBITION.

No mighty an effort as Mr. Lewis's "Sinai" is not to be expected from him every year; yet he sustains his reputation by No. 302, "Harem-Life, Constantinople," which represents a Turkish lady seated on a dewan at a window, and trifling with a fan, while an attendant approaches her. The same elaborate finish pervades this work as of yore; but we cannot applaud the facial expression of the principal figure, verging as it does upon a simper, while the flesh-tints therein have a chalky whiteness and want of purity, which is the artist's weakness. This, with a need of aerial truth and softness, which would bring the scene into a broad whole, deprives one of the satisfaction which should result from the marvellous elaboration and exquisite colour, of which the delicate tints of tender silver-gray and green and purple-brown are as exquisite as ever. The flesh-tints of the attendant's head are much richer and purer. It is noticeable how regardless of labour the artist shows himself by repeating this face in a mirror on the wall.

This exhibition would be incomplete without Mr. W. Hunt's works. He gives us this year a man's head, "A Poacher," No. 228. No. 261, "Primroses, &c." (the flowers against a marly bank), appears over-hot in colour. No. 286, "Quinces, &c.," having all the indigestible appearance of the life, but being a trifle too green; the colour of the under-leaves exquisitely natural. No. 294, "Apple-blossoms," is the work which delights us most; the delicate

flower-blush being wonderfully rendered. There is not a more original painter in England than W. Hunt, or one who is more devotedly faithful to nature; it is not without astonishment, therefore, that we see him producing, year after year, the same class of subjects. Exquisite as they are, we really *do* get a little tired of the eternal "Primroses, &c.," we are beginning to loathe the marly bank; and the bird's-nest palls upon us more than its eastern representative might upon a dyspeptic Chinaman.

Mr. Carl Haag is in force this year, with ten pictures, from which we select No. 71, "Ischian Peasant-Girl," as a work upon which he would prefer to rest his reputation. This is merely a head, large for water-colour, but very broadly and vigorously drawn, and full of expression. No. 273, "Sabine Lady," is a work of similar character, but by no means comparable with the last, being crude and hot in colour. "The Duchess reading Don Quixote," No. 86, J. Gilbert, is more than worthy of the artist—no mean praise; the expression reminds us of Leslie, the only painter who has quite succeeded with this character. Mr. Gilbert's fault is, that, as usual, the picture is hot and coarse in colour; an error which is strangely prevalent here. "A Zouave Story of the War," No. 24, F. W. Topham, exhibiting a warrior enchanting some women with deeds of military heroism, shows great knowledge of French character, and justness in representation of female expression.

The picture which appears as the leader of the exhibition is Mr. F. W. Burton's single work, No. 130, "Faust's first Sight of Margaret." The latter hastens from the ardent regard of Faust, but with a languid reluctance, which is perfectly expressed (indeed, wisely suggested) by her face and action; there is a sort of tender petulance in this that is a complete conception of the character, which really we have never seen so truly given, although quite aware of the great hands which have dealt with the subject. Faust's figure appears clumsy and coarse, and that of Mephistopheles common. We consider this the best picture, because it is the most successful resolution of the greatest problem in art—a beautiful and characteristic human face with perfectly just and natural expression. Other faults and other merits are quite out of sphere with this. A very remarkable work is No. 156, "The Alps at Sunset, from the Faulhorn," W. Collingwood. We have the night-mists filling the valleys where darkness is, while up the mountain-side the evening shadow creeps in graded zones, from blue, through purple, amethyst, crimson, and rose-scarlet, into the light itself which yet glorifies the summit with perfect brightness. Now this is a very curious and highly scientific piece of study, to which it would be difficult to accord too much admiration. The artist's other works are quite worthy of this, and although not so striking in effect, are extremely interesting and will reward study.

A very different class of subject is that chosen by C. Davidson, whose charming and thoroughly English sketches it is always pleasant to see; his "East-weir Bay, Folkstone," No. 32, is especially delightful. We commend to the visitor's notice its deeply studied sky and the aerial effect of the receding coast; also No. 113, "Lane at Redhill, Surrey," a road overhung with dwarf trees and bushes and full of greenery. No. 142, "Fairlight Glen, Hastings," brings us to the spot, and we might almost think ourselves brushing against the hazels, so truthfully suggestive is it. Mr. C. Branwhite has several pictures here of his old subject, frost: "Sunset, Winter—a Black Frost," No. 61, has an effect which is rather novel. P. J. Naftel's picture, No. 64, "One of Nature's Ferneries, Guernsey," a dell with a brook running through it, is delightfully refreshing. No. 96, "Brook in Spring, Guernsey," is wonderfully brilliant and effective; although sketchy, lacking not thought, as will be seen by the purple tint given to the shadows. Several other pictures by this artist exhibit the same power and careful regard for nature.

Mr. W. Callons's pictures appear to us over-purple and heavy, with the exception of No. 55, "Venice," which has a

chalky dryness about it very unusual with this artist. No. 108, "Gateway of Kenilworth Castle," has, however, none of these faults, and is fully worthy of the distinguished name the artist has earned so well. Mr. D. Cox, although retaining much of his ancient vigour, occasionally verges upon the unintelligible; his "On the Llugy," No. 60, is absolutely murky, and as mysterious as a late Turner. "Caernarvon Castle," No. 117, is even more so; while No. 299, "Bolton Abbey," reminds us of the artist's ancient and well-deserved fame. Mr. David Cox, junior, emulates this in several pictures here, especially No. 137, "A Heath," which is very excellent. Mr. J. Holland's works have always a charm about them to us, but we regret that he appears to have so lapsed into mannerism as almost to repeat his own effects on the same scene. No. 27, "Venice," really lacks solidity of execution, and some curious dashes of colour are absolutely unaccountable. It is so long since we began to think his pictures charming, that it is not without regret we say this. Mr. G. Fripp adds to his reputation by several pictures, of which No. 125, "Study on the East Lynn, Lynmouth," is the most interesting; this, although rather hot in colour, is so excellent as to credit even the artist. Mr. W. C. Smith exhibits two admirable works, Nos. 172 and 316, "The Lynn, Lynton," and "Sunset at Osborne;" the first a brook in a wooded glen, very charming and fresh; the second, a view near the Marine Palace, with a most powerful, original, and effective sky-phase of clouds in horizontal strata. The rippling roll on the surface of the sea is painted with extreme truth, as is the illuminated and receding coast in the distance. The picture which immediately precedes this, No. 315, "On the Lledr, North Wales," by G. Dodgson, shall have our last word in commendation of its honest and truthful qualities.

POLYGLOT READINGS IN PROVERBS.

THE GRACE O' GOD IS GEAR [WEALTH] ENOUGH (Scotch).—This is the Scotch version of the proverb which Launcelot Gobbo speaks of as being well parted between Bassanio and Shylock. "You [Bassanio] have the grace of God, and he [Shylock] has enough." W. K. KELLY.

A RATHER AWKWARD PREDICAMENT.

A TRUE STORY.

In what was once a very romantic village in Wales, but which, alas, like many other romantic villages in the romantic principality, has been doomed to give way to the *advancements and improvements* of this railway age, there lives one Davie Morgan, a barber. How Davie came to be a barber happened in this wise: Davie stammered, and, years back, when he was yet a boy, being one day sent with a message to a gentleman afflicted with a like impediment of speech, it so fell out that the gentleman grew very angry at what he supposed to be the lad's impertinent mimicry.

"How d—are you mo—ck me?" cried, or rather screamed the irate gentleman; and seizing a gig-whip, he applied it vigorously to the quivering limbs of the small urchin.

"N—o, ind—eed I did ne—ver mo—ck you," blubbered the boy.

"How d—are you t—ell me a l—ie?" and another vehement application of the whip.

Finding, however, afterwards that the poor little wight had been the victim of his over-sensitiveness, the quick-tempered but kind-hearted gentleman, not content with flinging the boy half-a-crown by way of salvo for his temporary wound, forwarded his views in life. Thus it was that Davie Morgan became a *barber*.

In process of time Davie married a pretty young widow (who had one child by her former husband), and became in his turn the father of three little ones. Now whether Davie had a rival in his profession, or whether he preferred a more manly craft, I know not; but certain it is, that he frequently

found employment at the neighbouring iron-works, leaving on these occasions to his better-half the entire charge of the hirsute chins and unkempt locks of his neighbours and fellow-workmen. On these she practised with such consummate skill, that she proved herself a helpmate indeed. On the whole, Mrs. Davie Morgan led a tolerably comfortable and contented existence. True, Taffy had his eccentricities,—as who has not? True, he drank a *little*, whipt her a *little*, and was given not a *little* to the exercise of his physical strength in trials of single combat with any stray bully of an Englishman or hot-headed Irishman who, like himself, might be of a pugilistic turn.

But these traits of character tended rather to insure Mrs. Morgan's admiration and respect than the reverse. Her arguments, which were characteristic, ran this wise. Where are your sober men? Very scarce in South Wales. Then as to the whipping. Why, was it not better far to have a husband capable of keeping his wife in order, rather than to belong to a fool who required her services as administratrix on his own paltry person? For very certain, and very clear it was, to Mrs. Davie Morgan's perceptions and sense of right, that the conjugal *bâton* must be lodged in the hands of one or the other of every united pair.

Then as to his martial exercises. Why, in these she absolutely gloried; his deeds of prowess were to her as the triumphs of a knight of chivalry.

It was a dull dark evening of November 1855 that this worthy couple were comfortably seated by their cheerful fireside, Davie smoking his pipe and ruminating, while his wife was alternately stirring her tea, and quieting the peevish cries of the youngest of the olive-branches, when a stranger abruptly entered. He was dressed in a handsome suit of black—in a perfect glitter of expensive jewellery, studs, rings, and gold chains.

Mrs. Morgan hastily rose, quite dazzled by the unusual splendour of his presence.

"How d'ye do, Rachel?" inquired the stranger. "May-be you've quite forgotten me?"

Had a cannon-ball suddenly burst in the midst, Mrs. Morgan could scarcely have appeared more aghast. She drew her infant more tightly to her breast; while the stranger repeated the question.

"Lork, it's a sperrit,—the sperrit of Evan Griffith," murmured the now pale and trembling woman. "Yes, sure it's his sperrit," continued she, in a low muttering voice.

"I'm no sperrit, not I," returned the substantial apparition; "I'm flesh and blood, Rachel Griffith; an' I'm your husband, I am, an' you knows it."

"Yes, sure," replied the horror-stricken Rachel, "you was my husban'; but you was dead this long time. Yes, indeed, you died in Australia, you did—yes, sure."

Davie, surprised by his wife's manner even more than by her words, now turned round with a stupefied stare, as he mechanically tapped his short pipe on the hob to remove the ashes.

"Who's that 'ere man?" inquired the stranger, pointing at the barber.

"He's—he's—my present husban'" replied the dame, trembling from head to foot, as though she could not yet make up her mind as to the reality of the strange apparition.

"He's your present husban', is he? Any way, I'm your husban' too, I'm thinking."

"Yes, sure, and so you was; yes, indeed, but you was dead this four year; yes, indeed," continued the woman, in a dreamy voice, lulling her infant the while in her still trembling arms.

"Wh—at's that?" stammered Taffy, beginning slowly to awaken from his quiescent state. "You be h—anged; th—is is my house; sh—e's my w—ife. Wh—at do you w—ant here; you be h—anged." Here a few polite epithets intervened.

But the stranger was imperturbable. There he stood, calmly and quietly, eyeing first one and then another, down

to the infant of three months, who, unconscious of any particular cause of excitement, was crowing and kicking, and doubling his tiny fist in his mother's face, after the manner of babies in general.

"I s'pose that 'ere's mine as I left a babbie, seven years agone; he worn't much bigger then nor the little 'un in your arms," said he, pointing to a small boy, the tallest of the little group.

"Yes, sure; yes, indeed, that's him, sure," replied the woman mechanically.

"Y—ou be off; you be h—anged," again interposed Davie Morgan. "Y—ou're not w—anted here, no how; sh—e's my wife, I tell you."

"Any way, she wor my wife afore she wor yours for certain; an' she's all the wife ever I had; and I'm not dead no how, for here I be."

"An' it's dead I thought you was," whimpered the woman, applying the corner of her apron to her eyes; "yes, sure, it's dead I thought you was this four year. Yes, indeed, an' it's your own mother as sent to let me know just four year agone. I'd never ha' married Taffy there if I hadn't ha' thought sure you was dead; it's no fault o' mines no how."

This seemed to afford abundant consolation. Indeed, Mrs. Davie Morgan evinced no violent inclination to hysteria; on the contrary, it was clear she had recovered her first shock, and, finding that the apparition was no unearthly visitant from another world, but truly a person of like bones and sinews as herself, she merely regarded the matter as a *contretemps*.

"Well, what did you do with that 'ere money as I sent you from Australia? How could I be dead an' sending of you money all the time?"

"I hav'nt had none this four year, no sure; it's little I had afore that, too; an' since I was a widder I had the club-money reg'lar."

"You wasn't a widder long, no how," ejaculated husband No. 1.

"Y—ou g—o and be h—anged," growled husband No. 2. "We don't want n—one of y—ou; you was d—ead th—is long time."

"I'm not dead no how," replied No. 1 to No. 2. Then turning to the mutual wife, he continued: "What did you do with the fifty pounds as I sent ye just four year agone,—that's just what I want to know?"

"It's never get it, I didn't, nor nothin', but the messago to say that you was dead and buried. There's wicked it was of the ould ooman! it's keep it she did! yes, indeed, that's clear, for she didn't never give me no fifty pound; and that's what for she said you was dead. Yes, sure, that's how it was all,—as clear as day, yes, in my very deed."

"I shouldn't wonder no how if it worn't somethin' o' the kind. But she's dead any way, so we can't get nothin' out of the like o' her," exclaimed Evan.

"Look now, perhaps she'll come too; yes, indeed, there's no sayin'; you know you was buried yourself."

"Any way I'm not dead; so come along; I've more right to you nor that chap there, any how."

It was now Davie's turn. Mrs. Taffy's skill in the shaving department was too direct a means of profit for him to relinquish without an effort. The voices grew louder and more vehement. The neighbours, attracted by the uproar, assembled in groups by the door. The clamour became universal; each husband claimed his wife, who stood pale and trembling amid her astonished progeny.

"What'll you take for her?" suddenly inquired No. 1, taking advantage of a momentary lull.

"F—ifty p—ounds," replied No. 2; "not a p—enny less nor f—ifty p—ounds,—do ye h—ear?—and then ye m—ay t—ake her, b—abbies an' all!"

"I don't want no babbies except my own," rejoined No. 1.

"W—ell, ye sha—n't have her n—o how without the

• "In my very deed," a Welshman's strong affirmative.

b—abbies, I t—ell yo; w—hat'll I do with 'em h—ere b—abbies?"

"Which of your husban's do yo like best, think yer?" eagerly inquired a matronly neighbour of Mrs. Davie Morgan, *alias* Evan Griffith.

"Well, indeed, sure it's always love my first husban' I did,—yes, indeed" (with a little sigh); "an' I no way mis-liked my second neither. I could live very well with either of 'em, if th' other 'ouldn't keep such noise;" and here a very quiet and subdued sob bore testimony to the calm and pacific tendency of Mrs. Taffy's feelings in general. "But sure it's a pity he come back, for it's dead I thought he was this four year,—yes, indeed."

A few weeks had passed, when a party of women were assembled on the platform of the station, waiting for the train which was to convey them to market. The women were severally provided with warm Welsh flannel dresses, red whittles, large market-baskets, and small babies. (Was ever Welsh woman without her whittle or without her baby?) The women were comfortable-looking, rosy, cherry-lipped women. Let us listen to their conversation.

"There's a row Davie Morgan's a keepin' with that 'ere Evan Griffith," exclaimed one comely young matron, as she stood rocking her infant in a measured step, patting the while its chubby back to keep time, and finishing her remark with a gentle h—ush—sh to lull a little impatient whine.

"Yes, sure," replied another, placing her basket on the platform, and tucking her infant (Welsh fashion) tightly in the ample folds of her whittle (for the tiny creature was not yet a month old); "I was up in the hood (*wood*) there for a couple o' sticks last Tuesday night, and there's swearing they was; I thought sure Davie had a half-kilt him; but I haven't heard nothin' of the rights of it never since, nor which of 'em is to have her. And there's rich Evan is! I seen a lovely gool watch an' chain he've got for her, an' the beautifullest brooch, if she'll go 'long with him."

"Yes, sure, I seen 'em too; but yer see where it is, Gwenny. Evan's willin' all along to give the fifty pound for Rachel an' little Rees; but he seen it too much to keep Davie's three littlest 'uns; and it's not willin' Rachel is to part with 'em neither, not even for the gool chains an' watch, an' all that."

"Ay, sure," returned Gwenny. "Them three's what it is; and Davie won't sell his wife without 'em 'pon no account. Well, there's noise they're a keepin' all along. I wish they'd ha' settled it."

"Well, and so they have a settled it," interposed another of the matronly group; "they've a settled it last night."

"Well, an' which of 'em is for to have her?" inquired the whole posse in a breath.

"Why Davie, sure. Yes, in my deed!" in reply to certain incredulous looks. "Davie's got her back again, for all Griffy took her away,—yes, indeed *sure*. I seen her in the house this very minute. Dear Annul, there's queer it do seem! there's fightin', an' swearin', an' bargainin' there have been. I thought sure Griffy'd ha' kep' her when he taken her away; an' so he might for Davie, if he'd a taken the littlest 'uns too. Dear Annul, there's a beautiful boy the baby is!"

"Yes, sure, an' so he is! An' I heard tell," interposed Gwenny, with an arch smile, "that the rich gentleman up by Cefn Fawr there had offered a thousand pound if Rachel'd sell him out and out; and that his wife Lady Owen Howels tried hard to get him to 'dopt him for her own."

"Ha, ha!" laughed the females in full chorus. "Well, sure, the talk have been so; but now it's all right, an' Davie an' Rachel have settled in again. And there goes Griffy, gool chain an' all. Well, in my very deed, he's goin' by this very train. Yes, sure."

Whistle, and off.

The reader may be interested to learn, as the *dénouement* of this most true story of every-day life, that the apparition

of husband No. 1 never again returned, but took his final departure with the rosy matrons and babies on the memorable market-day. It is well certified, moreover, that Mr. and Mrs. Davie Morgan have never allowed the events above recorded to trench in any degree on their connubial felicity.

The long, bright, blue pole, insignia of her art, still flourishes over Mrs. Davie's door, at the threshold of which may now be counted, on fine days, five fair gradations of infantile humanity.

M. H. D.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavallable Papers, except in cases where it may seem desirable to communicate with the writers.]

TURNING our backs on the grim St. Francis under the gloomy arch, leaving to the right Van Dyck's immense picture of Charles I. on horseback, and with his head on, and Kneller's fine full-length of Peter the Great in armour, we pass out of the ancient gallery at Manchester, among the landscapes of Cuyp, Both, Ruysdael, and Hobbema. One of Hobbema's very best works is in the corner on our right, and might be overlooked. The quiet road, the bushes, and the sauntering cattle are altogether marvellous.

The archway on the other side of the central hall opens into the gallery of modern painters. On the opposite wall, as you enter, Thais leads the way, torch in hand; not exactly like another Helen, but like a bare-kneed classic of the days when good old Sir Joshua was king, and also, we suppose, like Miss Emily Bertie, in her tantrums.

At the east end of the gallery, looking down the long avenue of English art, Gainsborough's "Blue Boy" hangs in the centre, with his bewitching full-length portrait of Mrs. Graham on one side, and the faded but very graceful one of "Mrs. Pelham feeding her Chickens," by Reynolds himself, on the other. Poor Barry's "Pandora" fills up the space over these, and facing them, at the extreme west end, with about six hundred pictures on the walls between, Mac-lise's "Ghost Scene" and Leighton's "Cimabue" bring up the chronology of the gallery almost to the present moment.

Mr. Egg has had the arrangement of this gallery, and has made the general effect extremely pleasant and tasteful. To some extent also his arrangement is chronological, which was much to be desired. He has followed the traditions of the Academy, however, so far as to let slip one valuable opportunity. For purposes of display, the works of each artist may be scattered and separated; but for all purposes of study, they should be kept together. This is the case especially when instruction is to be given to the uninitiated. Those who know little about painters or their works,—and they include nine-tenths of the population,—would in a single visit receive some definite impression as to a painter's style and general characteristics, if they saw half-a-dozen of his works grouped together in one place; but it requires not only many visits, but a great deal more systematic labour than the public have any idea of giving, before such an impression can be made, when pictures by the same artist must be sought for up and down along the dazzling and crowded walls of a great gallery. The visitor who meets with a second example of Stanfield, Leslie, Egg, Hunt, Collins, or Pickersgill, has already forgotten the first, which delighted him when he saw it, but is now confounded in his memory with twenty others, all by different masters. Doubtless there would be a certain sacrifice of general elegance and symmetry if such a grouping were carried out; but this is a very small matter under the circumstances. It has been partially adopted in a few instances; for example, with the works of Mulready, Wilkie, Louth-bourg, and Hogarth, always very much to the advantage of the spectator; and we look upon it as a matter of so much consequence, that we can hardly help hoping to see a

new arrangement of the remainder before the Exhibition is closed.

From Hogarth to Leighton is from the first to the latest efforts of modern art. If it were also from the beginning to the end, if the climax had been reached already, there would be little more to say on the subject, and the sooner that little was said and done with, the better. But as day-break, which would be a melancholy affair if it ended only in purple clouds, is, on the contrary, a great and joyful one, because it ends in sunrise,—so the progress of art in England is a thoroughly cheerful and refreshing spectacle; not for its achievements, but for the splendid promise of which they are the herald and the sign.

The first great feature of this modern gallery is its vast variety; the broad area that art embraces here; the number of fountains through which its powers bubble up. We do not find these painters all at work on the same theme; producing nothing but altar-pieces at one period, nothing but mythologies at another, nothing but comedies at a third. Hogarth himself begins with a wide extent of subject: fun and pathos, landscape and portrait, are all separately illustrated in his works. As we look down the gallery this diversity of power grows into still greater prominence, and is quite extraordinary in our own day. What visible object is there in heaven or earth that cannot be painted now? Landscape is entirely mastered; so is architecture; so are the human form and the human face; so are all cattle and creeping things,—beast, bird, and fish, flowers and the atmosphere. Here is a picture by Stanfield, "The Battle of Roveredo;" it is a magnificent view of the Tyrolean Alps, seen up the valley of the Adige; and those who know any thing of Alpine scenery will feel how powerfully the effect of height, distance, and snowy peaks is rendered on the canvas. Last year's picture, "The Abandoned," by the same artist, hangs in the same room, and shows an equal power over the fury of the sea. On the opposite wall is Linnell's "Autumn Landscape," where the effect of light through foliage is given with the magic of truth. Danby's pictures are perfect in their peculiar splendour, and you breathe the cool air of misty mornings as soon as your eye falls on Cooper's capital "Halt on the Fells." Turn from landscape to figures. For fun, there are Wilkie's well-known pictures; Mulready's "Barber's Shop," and the "Wolf and the Lamb;" Webster's "Slide;" and Goodall's "Irish Wedding," more admirable still, however, for the dancing of the girl. For pathos, there is Wallis's "Death of Chatterton;" for tragedy, the face of Hunt's "Isabella;" for acute expression of character and momentary feeling, Egg's "Peter the Great's first Interview with Catherine;" for pearly flesh and naked forms, Mulready's "Bathers," and Frost's "Una;" for colour, Millais' "Autumn Leaves;" Landseer for animals; Roberts's "Seville Cathedral" for architecture, and Miss Mitrie for flowers. This at least is a very wide range, and the examples quoted are almost perfect of their kind.

Here, however, we must pause. These are the limbs of greatness, but the soul is not in them yet; these are the colours of daybreak, but it is not day. Looking back upon the old masters, the choice of England has hitherto fallen especially on the works of Guido, Domenichino, Murillo, and Claude; that is, it has fallen on those who have left us much to love, but nothing to worship; much that is tender and touching, little that is noble and inspiring; much to gratify our taste, little to amend it; and the spirit which has led us to this inferior choice is manifested generally in the works of modern artists. These men, we may be very sure, have never stood awe-stricken before the thought that flashed over their still uncoloured canvas. They have painted nothing on their knees; they have never felt that the work under their hands was a panel in the world's altar-piece. They have done much and done well, but art itself can do more and better; their works, at best, are merely human, and the greatest works appear only when the artist feels his subject to be divine. Here was the secret of the

older masters. Their work was worship. The ideas they express, and the feelings they appeal to, are such as belong only to immortal souls, and not in the least to perishable bodies. A worm can take no interest in a crucifix, and can feel no sympathy with a Madonna. To ask for such interest and such sympathy, is to address us as beings infinitely higher than a worm; and it is because they do so address us, and because thus to take the highest truths for granted is to re-awaken our consciousness of them, that the old religious pictures possess their peculiar power, and remain unapproached by the works of later years.

The defect of modern art is in its spirit, not in its form. Nothing would be gained now by going back to the subjects of former days, and painting Nativities, Riposos, and Martyrdoms. The time has passed by when these were the forms into which men's noblest thoughts naturally threw themselves, and to try to express thus the feelings of the present age is just to put new wine into old bottles. Every attempt of the kind has been a failure, and must continue to be so. Even when Hunt painted the "Light of the World" he took a great step in a wrong direction. The picture was perhaps the best work of modern genius, and was in certain respects quite different from any thing that had been done before; but at present, and for all future time, it is a mistake to attempt to paint the face of Christ any more. There is no external form that will in the least represent the internal idea, such as it has now become. The subject has passed out of the sphere of art, and should be at once abandoned.

It is one of the privileges of modern thought that it is able to recognise what is divine, not only in the distant and the miraculous, but also in the natural and the near. We know now that there is hardly any thing, however small or homely, which may not, if we catch it at the right moment, be the emblem and the awakener of our loftiest states of thought and feeling. Knowing this, there is all creation before us for a subject, and the genius of modern art does indeed employ itself in every conceivable sphere, from the details of a stone to the vision of a celestial city. Where it fails is in the choice of aspects—the power of seizing those pregnant and inspired moments in which alone any outward form becomes the embodiment of any great idea, whether the form itself be a celestial city or a stone. The face of the whole material universe is like that of a single human being. Commonly, it expresses very little. There are instants in which it tells the story of endless ages and of infinite joy or woe. Copy it in the first of these aspects, and you get a portrait more or less interesting, nothing more; copy it in the second, and you get the works that make men nobler when they look at them. Of course the want here is in the minds of artists themselves, and no criticism can cure it; but as a nation we ought to be conscious of it, and to proclaim our consciousness perpetually, not only in the interest of our own taste, but for the sake, especially, of our younger painters. The atmosphere of public opinion is what they live and move in; the purer we make it, the better chance we give them; help cometh always from the hills.

Looking more closely into this gallery of modern art, one sees a certain prose about it which is characteristic of the times. Here are these pictures by West. They are simply bulletins of the fact that Captain Cook or General Wolfe was killed at such a place in such a manner. The careful commemoration of the circumstance is a proper subject for a Gazette or a grave-stone, but not at all for a picture. To make it worth the expenditure of an artist's powers, it must be so represented as to commemorate, not the fact merely, but some thought of heroism, beauty, terror, or pathos connected with the fact. It might be very true that General Wolfe expired exactly as the picture tells us he did; but if so, all that can be said is, that the moment of his death was not the right moment for the painter to lay hold of him. It is not given to all men to die poetically. When a hero gives up the ghost in prose there is no occasion to

make a picture of him in this predicament. Copley's picture of the "Death of Major Pierson in Jersey," though mistaken in the choice of an historical subject so little known in history, is worth all of West's put together in its effect upon our feelings. It treats of battle; and the stir of battle is powerfully expressed. There is a rush and a struggle; the flags are flapping; the men fighting and falling; the dying chief is dying because he has been shot, and not because he is going to be painted. Here are many subjects from Shakspeare. One would think English genius should know how to illustrate his Plays; but, with the exception of Hunt's wonderful "Head of Isabella," they are all failures. Look at this by Herbert; is it King Lear? In no respect; nor Cordelia neither. An old man frowning, with a beard and a bald head, is one thing, King Lear is another. Cordelia is not, we fancy, merely a sulky girl with a wide forehead. Why, the artist himself knows he has not painted Cordelia, for he has given the selfsame head in another picture to Herodias!

Look at these character-pictures by Frith, Leslie, Egg, and Pickersgill. The variety of character displayed in the faces is immense, the discrimination acute, the execution capital; but the expression is nevertheless commonplace, and destitute of any very important interest. In Frith's picture of the "Witch," for example, the girl is merely a pretty girl, with a sweet face, rather scared. These are but illustrations of the universal want. We look with pleasure at almost every picture in the gallery; but we leave them without being conscious that any deep truth or any glorious vision has been impressed upon our souls. They speak of passing interests, not of permanent ones; they please us because we are men, not because we are immortals.

In the mean time, one grand step in advance has been already taken. Our modern painters, if not lofty in spirit, are at any rate pure. Their works are neither prudish nor indecent; they wish to celebrate what is truly noble, and to throw the robe of beauty on what is really good. This is the road to greatness. Our St. Christopher has already left the prince of darkness, and is working patiently in the river. One day he will hear the voice of the little child.

[To be completed in our next.]

WHEN THE NIGHT AND MORNING MEET.

BY DORA GREENWELL.

In the dark and narrow street,
 Into a world of woe,
 Where the tread of many feet
 Went trampling to and fro,
 A child was born (speak low),
 When the night and morning meet.
 Full seventy summers back
 Was this; so long ago,
 The feet that wore the track
 Are lying straight and low;
 Yet is there still no lack
 Of passers to and fro.
 Within the narrow street
 This childhood ever played;
 Beyond the narrow street
 This manhood never strayed;
 This age sat still and prayed
 A-near the trampling feet.
 The sound of trampling feet
 Flowed through his life, unstirred
 By water's fall, or fleet
 Wind-music, or the bird
 At morn. These sounds are sweet,
 But they were never heard.

Within the narrow street,
 I stood beside a bed,
 I held a dying head,
 When the night and morning meet;
 And every word was sweet,
 Though few the words we said.

And while we talked, dawn grew
 To day; the world was fair
 In fields afar, I knew;
 Yet I spoke not to him there
 Of how the grasses grew,
 Besprent with dewdrops rare.

I spoke not of the sun,
 Nor of this green earth fair;
 This soul, whose day was done,
 Had never claimed its share
 In these, and yet its rare
 Rich heritage had won.

From the dark and narrow street
 Into a world of love
 A soul was borne; speak low,
 Speak reverent,—for we know
 Not how they speak above,
 When the night and morning meet.

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MESSENGER," ETC.
 IN TWELVE CHAPTERS.

X.—PRIVATE SKELETONS.

THE skeleton in Laurence Royston's secret closet was a very grim and ghastly skeleton indeed. It used to track him about the pathways of the cottage-garden, with a hollow menacing footstep. Adie never heard it; but sometimes, through her pleasant singing and her happy laughter, he was startled by its tramp at his heels, or the echo of it coming swiftly from a distance. Then he would grow almost impatient of her gaiety, as if she knew what haunted him. Adie wondered, was silent, and then sad. It would thrust a cold arm between them, and put them apart; it made a third at all their meetings, sat at their board, by their bed, and was as constant to Laurence as his shadow. He strove hard to be blind and deaf to its approach; but it was a part of himself,—a subtle emanation from his evil conscience,—which he could never part from: his existence was such as he had made it, with its shadow evermore on his hearthstone, and the horrible remorse at his heart. He might forget it for an hour, he might even defy it for a while, and measure his strength of mind and will against its torture; but presently its hour returned, and he was a mere coward, afraid of the darkness, and trembling at the rustling of a leaf below his foot.

Adie laughed and sang on; in his moments of gloom the fondest; when he was grave or stern, most blithe and cheering. What their life might have been but for that step in the dark! Sometimes a painful doubt came over the young wife's mind. Could he be growing weary of her? was she already losing her power to charm? They had been a year married, and now another life hung upon hers; yet sometimes he would leave her at the cottage with the servant for a week together, while he made excursions on foot about the neighbourhood, trying to evade his ghostly companion by constant movement and change of place. Yet when he returned to her, how glad he seemed to stay his weary feet at her side; how tender, how thoughtful, he could be still! Yes, he had not ceased to love her.

One day, during a wandering fit, he strayed into a wood by the wayside, to be out of the glare of the sun, and lay down on a turfy slope under the trees. There was an opening before him, winding away through high arching boughs,

THE RETURN FROM THE VINEYARD. BY W. WATERHOUSE.

and lost at last in a mist of sunshine. There was no whisper amongst the branches either of wind or birds; the very sprays of fern were unstirred. How weary he was; how dark at heart he must have been when he saw nothing of the beauty of these woods; heard nothing but a wail coming up through the trembling air burdened with a pregnant menace to his ears—"I bide my time!" There is not the peace of solitude for such as Laurence Royston in the dim forests; he must up, and go forward again.

Another day he went down to the shore. A flat of dry sand stretched out before him, with the wind sweeping visibly over it; above was a dull sky, boding rain; and to the furthest verge of the horizon lay a turbid, leaden, waveless sea, beaten down from the shore by the strong land-breeze. A dark reef, far out, seemed to glide like a marine monster, as the sullen swell revealed its outline from time to time. There were a few fragments of wood—parts of a wreck, perhaps—scattered near, a solitary bird swooping through the haze, and no other living thing in sight. His limbs were weary, his feet were sore, yet he still kept on, close by the sea, with his face towards it, and his imagination raising threatening shapes out of the mist, while his ears were filled with a wail that outmoaned both wind and tide. For miles on the lonely shore he went, without heeding that the night was gathering around him, and no place in sight where he could claim a shelter;—there was a point in the distance against whose base the waves roared eternally,

and high cliffs stretching beyond, reddened with the lurid light of riven storm-clouds;—for miles on the lonely shore, the scene growing wilder as he went forward, hoarse mutterings of thunder in the air, and lurid flashes gleaming athwart the black sea.

Worn out at last, he laid himself down in a hollow of the cliffs, and rested there till dawn; then on again in his abortive flight. Once that day he came in sight of a picturesque and ancient chateau, standing about two hundred paces from the shore. On the side towards the sea, was a planting of young trees, all leaning one way, as if, having bowed to the blasts so often, they were no longer able to raise their heads erect. It was a quaint old place, yet sunny of aspect, with little peaked towers and a great porch, under which were rude stone seats. All about its walls were creeping plants and ivy; in front lay a wide mossy lawn, with a dry fountain, whose brink was matted over with gay flowers, and in the midst was a broken sundial. Two huge hounds lay dozing in the sunshine; they were old, worn out, and toothless, but they lifted up their heads as the heavy irregular step of the wayfarer approached; and one rose up, gaunt and grim, and bounded across the lawn, barking furiously. Did they scent blood, or was it that Laurence Royston had the air of a dangerous prowler rather than of an inoffensive traveller? Cursing between his teeth, he strode on, so wild and fierce of countenance, that the people whom he met crossed out of his way. He had become emaciated

in body and feature during his solitary wanderings, and his expression was such as might have come over the man's face who played with Satan for his soul when, the stake being utterly lost, it was about to be claimed.

It was evening when he came back to the cottage, spent with fatigue, and racked by the poisoned memory he carried in his breast. Adie was sitting on the steps under the veranda, waiting and watching for him, as she always did wait and watch during his absences. The twilight was closing in; and as autumn drew on, the air had a more chilling breath, and the wind a more mournful sob. The lonely days of Laurence's absence had dragged over very slowly with his wife; but when she recognised his step upon the roadside, she sprang up, and was away to meet him in an instant, all sense of trouble and neglect dispelled at once. With his arm round her, and her anxious eyes questioning him with their upward look to his, they entered the house. The light inside was nearly gone, so that she could not see the expression of despair that settled down on his face, as they sat hand in hand by the little window which was half-shrouded by the rich yellow jacinth and passion-flower that hid the white walls. Yet, if her eyes could not see, her heart felt that all was not well with him; for his fingers were cold, and thrilled often in her clasp. Her idea was, that he must be ill, and, to save her anxiety, trying to conceal his sufferings. She entreated him to tell her what ailed him, and why he was so restless; but he put both questions aside.

"Let us go home to Nevil's Court," suggested Adie, laying her cool hand on his forehead, and speaking very softly. He started up, and pushed her hand away impatiently, then suddenly snatched it to his lips and kissed it passionately.

"Adie, I will do any thing you like, I will go any where, but here we will stay no longer; for I am sure there is fever in the air; my brain is like a furnace," he exclaimed.

The tears in Adie's eyes dispersed unfallen. She thanked him so earnestly, as to betray how strong her own desire for her old home had been, though she had hidden it from deference to his wishes. "Home!" she responded cheerfully; "home! Grizzie, poor old Grizzie! Don't you wish he were there to give us a welcome, Laurence?"

"I do, from my soul, Adie!" he cried, with such fearful energy as to startle her,—"from my soul!"

"The people in the Court will be glad, I know," said she, a minute or two after; "Martha and Mrs. Parkes especially. I should like my child to be born there,—I feel as if it ought, Laurence,—then it will be English like you." The young wife talked on of the future that was to be so bright and happy to them both in the old haunted house, and laid plans for making it quite a cheerful abode, without displacing any of Grizzie's ancient possessions. "For," she observed, "it seems to me as if he were master there still, and would object to having great changes made. Besides, I like the carved oak chairs and presses—do not you, Laurence?" He did not seem to hear her prattle, for he made no articulate answer to any of her questions. Perhaps he and his private skeleton were talking together.

XI.—THE PICTURE-DREAM.

They were back again in Nevil's Court, with Martha, Mrs. Parkes, and the footsteps. On the night of their arrival, the mysterious tramp was heard in the corridor for the first time since Adie's marriage. She listened to it with trembling, recollecting that Grizzie had called it an omen for evil; for she thought of her own hour of trial which was approaching with an indefinite fear, while her heart yearned to Laurence with more than its old passionate love.

* Was the warning for her or for both?

One Sabbath afternoon all the house was very hushed; the children were away at church or at school; the doors and windows were all shut, for the air was cold, like the first day of winter. Laurence Royston was in the work-room, graver in hand, and a half-finished plate before him,—he took no note of times and seasons,—as if he intended to dis-

tract his thoughts by toil; but instead, he sat waiting,—O, God, how anxiously!—as if his own death-sentence hung upon the message he was expecting to hear. They had told him Adie might die; and as the possibility forced itself into his thoughts, he felt almost maddened.

"It cannot be, it shall not be!" he said to himself.

It was not often in his lifetime that this man had prayed; but when that fear came upon him, he besought God slavishly to punish him for his misdeeds in any way but that. So much as he had perilled, so much as he had lost, to possess her, he had a right to keep her. Then he almost defied Heaven to take her from him: she was his by purchase; he had given for her the utmost price that man could pay, and he would not be defrauded of his due. The solitude of the old room, or perhaps Martha's furtive eye, alone witnessed these ravings, which seemed to shadow forth some hidden deed. Possibly, that deed it was that kindled his pale eye with lurid fire, and haunted him with its presence always. There were great drops on his forehead, which he wiped away with a trembling hand, while his mouth worked violently. This agony of suspense was insufferable, and what long long hours it lasted! He dared not go to his darling, lest the blackness of his curse, overshadowing, should destroy her; and yet, when the night fell, no one had come to tell him whether he was the father of a living child or the husband of a dead wife. The darkness crept on unawares as he waited and listened; at last, he lighted the lamp and tried to read, but there was neither sense nor continuity in the page, and he soon threw it aside.

Utterly exhausted in mind and body, a sort of lethargic trance fell upon him, and with that a fearful dream. At first he seemed to be driven onward violently over a dark heaving gulf, and then hurled down the yawning vortex into a darkness that might be felt. Presently, through this darkness moved vivid shapeless lights, which seemed to portend the advent of some nameless horror. He tried to draw himself away, he struggled to cover his face, for he felt what was coming; but his efforts were as the efforts of a prisoner chained hand and foot and powerless to stir. Then he nerved himself to look, and the old room in Nevil's Court—where he was sitting—appeared in his dream. It was all aglow, as with the ruddy heat of a Yule-tide fire, and old Nicholas Drew was there. Then was enacted before his sight the whole scene of the murder, even to the dropping of the glove. That incident startled and awoke him: "Where is that glove? who found it? who has it now?" he asked himself fearfully. All the vision had resolved itself into the lost glove; he could think of nothing but that. "The other was burnt; it must have been destroyed too; I heard no mention of a glove having been found." He glanced suspiciously round the room, shrinking down into his chair in the very attitude of guilty fear; whilst his skeleton at his elbow kept whispering: "Where is the glove? Who has the glove? Whoever has the glove has your life with it!"

How long it was from the passing of the vision to the entrance of Martha he could never tell; it might have been five minutes, and it might have been a night-time; but he was himself again the moment the woman spoke.

"My mistress has asked for you, sir," she said briefly; not a syllable of warning or congratulation.

He asked if the child lived, and was answered that it did, with the same coldness. Even at that moment a suspicion had time to enter into his mind. "That woman has found the glove, and she is watching me," he thought; but he passed her with an air of over-acted carelessness, and went to Adie's room. Mrs. Parkes made a spasmodic effort to utter the proper felicitations, and failed with a choking sob. He did not heed her, but looked in between the closed curtains of the bed, to meet a wan wistful smile on Adie's face.

"O, Laurence, I am so happy, because of the boy," she whispered, as he bent over her. "Look at him; they say he is like me;" and her eyes lighted up with the fun of the idea, that such a queer little mortal could resemble any

thing but a bundle of soft muslin and fine flannel, with a doll's feeble-face. Laurence hid his feelings under an appearance of exuberant joy. He could not be really glad; for the boy was born under his curse, and he remembered at the moment those terrible words: "I will visit the sins of the fathers upon the children." He was in haste for once to leave her, and steal back to his haunted solitude; and perhaps Adie was glad that he should go; for she wanted to have her baby to herself, to think about it, to whisper to it, and to pray for it.

It was not long before the young mother was about again, brightening the dim old rooms with her cheerful face. Laurence liked to hear her crooning nursery-songs with the child in her lap, to see her play with it on the floor, or dance it in her arms. But when she had soothed it to sleep on her bosom, and laid it down in its cradle, he fancied that his skeleton kept watch by it, and shadowed the boy's face with deadly wings; he was never easy until she took it again to her heart, for he thought it safer there, as well he might, in the sanctuary of a pure mother's love. It was not strong; and by and by there came a look of angel beauty on the tiny features—a soft radiance, as if a smile from Heaven had shone upon them, and left His trace and mark that the great Reaper might know it when he came that way. Adie had her thoughts and fears, but she kept them secret in her own mind, and tended the child with a reverent and most tender watchfulness. She liked to deck it gaily, and to work for it; she made advanced garments of ingenious device, as if she were thus pledging him to stay with her; and all the while that he seemed to be fading away, her prayer to God was, that she might keep him.

Laurence used to sit by the second window,—not in Nicholas Drew's old place,—working at his craft assiduously; while Adie, within range of his sight, sewed or nursed the child, and sang, now in a plaintive, now in a gay tone, the old ballads.

Mean time winter advanced. In the Minster Yard the poplars were despoiled of their foliage, and in the bishop's garden lay the dead leaves whirled into sodden heaps, while the trees looked black and naked against the walls. The first day that the snow fell was a notable one to Adie. It was early in December, and the merry shouts of children down in the Court called her from the fireside to see the broad white flakes fluttering earthward. The little child stretched his hands upwards and laughed; the sound did her heart good to hear. She danced him on her hand, and prattled to him gleefully, until their rather noisy mirth caused Laurence to lift his eyes from his work to watch them. The two were so much occupied with each other, that he enlisted none of their attention, and with a half-sigh he arose, and went across the room to the hearth.

Standing before the fire, thoughtful and moody, the same trance-like feeling came over him as he had experienced on the night of his child's birth, and again the vision of the murder and the lost glove enacted itself before his fancy. His face grew absolutely livid, and his eyes opened with a wild affrighted stare.

At this instant Adie turned round and caught his awful expression; she had time to decipher it, indeed, for so startled was she, that for a moment she never spoke, and Laurence did not know himself observed.

"O, Laurence, Laurence, what is it?" she exclaimed at last, going to where he stood. "Why do you look so; you seem quite affrighted." He tried to laugh, but it was a ghastly effort. He said it was a spasm of pain at his heart, but that it would soon pass.

"Laurence, let us leave this place," she said, looking all round the room; "it is not good for us to be here. I feel as if it were haunted with something worse than the footsteps. Baby does not thrive, and you often appear ill, and I shudder to be left alone. I am satisfied now, for I am sure dear old Grizzie would not like us to stay if he knew how we suffer. Shall we go back to that pretty cottage by the seaside? It was very happy being there, Laurence."

"So it was, Adie. You might be happy any where, with your good, simple, loving heart; but not so can I; I must have more life and stir; my thoughts stagnate often till they breed frightful fancies. Let us go to London."

"So be it. After baby is christened we will go. St. Barbe and kind old Mrs. Parkes would be disappointed if we went before." And thus it was finally agreed upon.

A SUNNY DAY AT THE CRYSTAL PALACE.—A SKETCH.

If it is a sunny day at the Crystal Palace, take our word for it, reader, it is a hot one in the city of London; if the heights of Penge bask in the summer sun, rest assured the flags in Cheapside burn like the sands of the desert; if a pleasant breeze plays across the palace grounds, whistles through "the Temple of Roses," and coquets with the gorgeous flower-beds, depend on it, it whisks the dust in playful eddies into the eyes and nostrils of the languid wayfarer on London Bridge.

In humble imitation of that famous New Zealander a brilliant fancy and a magic pen have placed for ever on this said bridge, we must also conjure up for our special purposes an imaginary "lay figure." The languid wayfarer just mentioned will do. He stands looking over the parapet of the bridge on the broad shining river; which, like a fair face over a corrupt heart, looks well enough, if surface satisfies, and the lower abominations are not disturbed. Away through the forest of masts springing up from the dark "Pool," he gets a glimpse of the heights of Blackheath, Greenwich, and Shooter's Hill. Bright, tempting, and pleasant they look in the blue distance. Like the promised land, he contrasts with them the roar and turmoil of the passing crowd, and longs to taste their sweetness. Visions of quiet shades and "pastures green" rise in the mind of our loiterer as he mentally resolves to "go somewhere." Where to go is the next and natural question. At the moment a puffing, wheezing, smoking steamboat rushes from beneath the bridge, turns to land her crowd of passengers, and in doing so, displays on a large board the answer, like a card in a conversation pack, "To the Crystal Palace." His mind is made up in an instant. He is a man of sense and taste, and has, at a very small cost, made provision for the passing of many an afternoon healthfully and intellectually by the purchase of a season-ticket. He dives into the recesses of his pocket-book for the all-but-forgotten pasteboard; and through the hordes of importuning owners of cigar-lights, boot-laces, and black dolls—which appear to squeak, but don't—he makes for the station, where, if he liked, he could, with equal facility, be accommodated with a ticket for Bombay or Calcutta, not to mention such short distances as Paris or Vienna.

At this point we will take him, like an old friend, under our care and guidance. We are lucky in catching an express train, ten minutes past the hour. In five minutes we have passed through the not too fragrant gales—not at all suggestive of "Araby the blest"—of Bermondsey and Neckinger Lane. In ten, we have dashed through the New-Cross cutting out on the green expanse of Forest Hill, and in five more are rushing up the incline, with the palace-crowned heights of Sydenham full in view,

"More brilliant than the sea-glass glittering o'er
The hills of crystal on the Caspian shore."

We pass the ticket-taker's barriers, and find ourselves in the glorious grounds, where each finer sense is met with the most delicate gratification. By the broad sward-edged walks, along the noble terraces, and up the sphynx-guarded flight of steps into the building, we pass, surrounded by objects of art and beauty and vastness which might have made the heart of Sardanapalus envious. We stroll through the cool and silent courts, and pause in the great transept to admire the variegated and well-contrasted colours of the building,

resting our eyes on the green freshness of the plants and the snowy forms of the statuary. Through the open doors of the balconies the summer-breeze carries in on its wing the soft swell of instrumental music. We turn that way, and lean over the railing, while the eye expands with pleasure in gazing on the splendid landscape, and from left to right sweeps over an expanse of true English scenery. From our feet to the horizon there is not a displeasing object; all is softness, beauty, richness. Foliage of the lightest and the deepest tinge alternate with green cultivated fields, through which quiet lonely roads wind away towards far-off out-of-the-way villages, marked by that never-failing and thought-suggesting object, the church-spire. There is not a cloud to mar this broad prospect. It is steeped in a flood of golden sunlight. From the grounds beneath there comes the breath of a thousand flowers; and again the martial notes of the fine bands rise above the hum of the gay and brilliant crowd that spreads over the upper terrace, laughing, chatting, and, like Ephemera, enjoying the passing moment. It is a scene, once beheld, not to be soon forgotten; and as the beholder, under the influence of its all-pervading beauty, gives reins to his imagination, he may fancy the soul that is in Nature meeting the soul of Man that is within him, and elevating it for a moment to heights that, in this bustling world of ours, it but seldom reaches.

But, to descend at once from these heights, and from the balconies to the ground, we saunter towards the fountains, which are about to play. We envy the grim old river-gods, who recline, clothed in the lightest possible habiliments, on the edges of the basins. They seem to bask in the sun, and look down placidly on the cooling liquid that ripples to their feet. We now become conscious of a rushing sound. The countless jets begin gradually to send upward bright pillars of water. Higher and higher they rise in graceful forms, like Spirits of the water, till the whole view seems one mass of flowing, gushing, descending water, crowned with rainbow-halos. It is truly "Water, water every where," and the senses of sight and hearing become almost confused amid the liquid mass. Gradually as they rose, the fountains sink, disappear into the basins, and all is quiet and sunny as before.

Yet further into the remoter parts of the grounds we push our researches. Rising the gentle grassy elevation that on its far side overlooks the antediluvian and pre-Adamite monsters, we turn to get the most imposing view obtainable of the palace itself, with its lines and outlines standing out in all their symmetric beauty against the clear blue sky.

Crowning this hill, we come on a little secluded paradise, —secluded for the most part from its being the side of the grounds far distant from the building. Pause before one of the many-coloured sketches in miniature of the scene before us. They have been most sensibly provided for those unacquainted with the names of the terrific reproductions of the animal kingdom that seem to range in all their native freedom the islands of the lake. In the interior of the largest monster, whose cognomen we dare not trust ourselves to pronounce, a party of scientific men are said, on one occasion, to have enjoyed a very jovial lunch. How they got in, and how they got out, the reader's imagination must conjecture. But, for our own part, we would "rather not" be deputed to take a young lady "down to dinner" —in this age of Crinoline especially—through that capacious throat and formidable row of spikes called teeth. Fancy his coming to life just as we reached his windpipe!

The sun is sinking, and once more we turn our steps to the scintillating building. When we regain the inside, there is a crimson stream of light pouring in through every part of the transparent roof and sides. It falls on every object with the effect of an enchantment. The faces and forms of the statues are lit up with a lifelike expression. The shrubs, the many-tinted flowers, the sparkling fountains, the gorgeous court-façades, are all alike blended into one harmoni-

ous depth of colour, in which an artist's eye would revel. A bird now and then gives out a little note of pleasure as it roosts far above us in the lofty transept, while, to give the last finishing effect, the swell of a fine organ reverberates through the building.

With a sense of all this beauty strong upon us, we turn to leave; but not without a feeling of admiration—the only tribute in our gift—for that body of men, with a Paxton at their head, who created this perfection—men whose hands were as skilled in artistic cunning as their souls were steeped in "the beautiful."

G. R. POWELL.

FLOTSAM AND JETSAM.

To the Editors of the National Magazine.

GENTLEMEN,—A "Constant Subscriber" to the NATIONAL MAGAZINE having constructed a binocular camera as recommended in my paper "On the chief Cause of Photographic Failure," and having found the pictures he produced deficient in sharpness, perhaps you will permit me to state, that I am persuaded he has overlooked the fact, that the foci of single lenses for luminous and chemical rays are slightly different, the focus for chemical rays being invariably nearer the lens than the point of greatest distinctness. As the amount of difference depends upon the nature of the glass of which the lens is made, and the relation of its curves to each other, the determination of the quantity is a somewhat difficult problem; but two or three trials will be sufficient to determine where a picture possessed of the greatest sharpness can be produced. I have found that a stereoscopic camera, with lenses of five or six inches focus, requires the sensitive surface to be placed about one-eighth of an inch nearer the lenses than the point of greatest distinctness on the shade or ground-glass.

Your correspondent requests to know whether it is immaterial whether the lenses employed be plano-convex or double convex. Either form will suit all practical purposes; but the best form of a single lens is when the radii of curvature are as one to six, as then the amount of spherical aberration is smallest.

Your correspondent has tried to procure rock-crystal lenses without success. Those I have employed were the broken lenses which were flung aside by spectacle-makers, which, although of no value to them, are of great value to the stereoscopic photographer, as even a small fragment is sufficient to fit up a binocular camera. Those of rock-crystal are easily known by their great purity and hardness, and are frequently called Brazilian pebbles.

I am, &c. R. G.

THE MUSIC OF THE FUTURE.

ROLLING lazily onwards from Pepinster, where it has set down a goodly company of Spa-bound travellers, the Great Rheinisch-Belgische *convoy* comes in sight, as it were, of Turkish minarets and spires, clustered together afar off in a grove of trees. One minute more, and "Aachen! Aachen!" (in plain French, Aix-la-Chapelle) is the cry, modulated in many guttural keys, so that the slumbering wake up with a start, and look forth curiously from the windows. Lo, the Guards—trim, compact, little creatures, in *kepi* and green-braided frock, with bugle-horn slung about them—have skipped airily on to the platform; and Messieurs les Voyageurs—such, at least, as have business there—are invited to descend. Instant population of the platform: every one coming forth to look around him, as through secret instinct that nourishment may be at hand. Such delay proves but a mocking delusion after all—a veritable *ignis fatuus*; for the bell rings out of a sudden, and the bugle-horns wind cheerfully, and the scared multitude come flocking from refectory-rooms, and drive blindly at the first open carriage-door. O, consider how this loose miscellany, as Mr. Carlyle

would say it, is ever to be properly bestowed; wrong men, and, alack, wrong women too, being hopelessly jammed together in wrong places, utterly beyond remedy. Once more do the bugles wind tra la! the little guards trip lightly on to the foot-board, and the *convoi* rolls slowly away Cologne-ward—to Cologne, city of sweet waters.

Meanwhile a *voyageur*, derelict upon the lonely platform, looks after the receding *convoi*, and bethinks him pensively of choice of a caravanserai. Shall he turn him to the Grand Monarque, with its air of quiet retiring grandeur, so illusive, so dangerous, where kings and kaisers have lain before now, where Dremel the Magnificent directs? Ah, there is a fragrant bouquet, as it were, of ancient wines wooing him magnetically to royal Dremel and his caves! The great king it must be.

Later in the evening, an hour or so before the grand gathering at the *table-d'hôte*, the *voyageur* chancs to be wandering over the town, taking note of a certain air of fading gentility which has hung about it ever since the fatal ukase went forth that shut up the famous tables; thinking, too, what a faithful cabinet copy it holds of Waterloo Place, and its proud plaster palaces! Suddenly he finds himself before a long Grecian temple, abundantly garished round with pillars, and standing in an open square by itself. The theatre, says an intelligent Aix-la-Chapellist. No shabby brickwork at the sides, skulking behind adjoining houses; no mean stage-door down a narrow lane. All open here, sir, and above board. You may walk round and round again, and find all sides pretty much the same. Stay. The *voyageur* has seen something that looks like an *affiche* fluttering at the box-door. Suppose he draw near, and see what is set forth as to-night's entertainment. 'Twill be *Czar and Zimmerman*, or the *Two Peters*, says the *voyageur*, with a dreary sense of presentiment on him, that piece having lain in wait for him at a hundred little towns on his progress. He knows every joke by heart, and feels a sudden faintness when the music strikes up. He draws near and sees written, not *Czar and Zimmerman*, or the *Two Peters*, but a magic soul-stirring announcement, showing how *Lohengrin*—yes, *Lohengrin*, the reviled, the extolled, the apple of discord that has set musical man against his brother; the "grand opéra romantique, en quatre actes, musique de Richard Wagner"—would be presented for the first time that evening. Further, that admission to the best places might be obtained for the moderate charge of one thaler—say three shillings; while those with means less expanded may look on from the gallery for a sum equivalent to threepence of our money.

Was ever music-mad *voyageur* so favoured? Here was Richard,—the Prophet, the poet, the Mahomet of the New Covenant, whom an ardent following bow down before and worship,—now about to discourse his strange mystic song and incantations, as though that *voyageur* had specially commanded a performance for his own delectation. Here was an opportunity of deciding for oneself a thorny question,—of hearing with one's own ears. When the famous Prophet, a summer or two ago, was wooed across the seas to England, and received into his hands the Grand Philharmonic *bâton*, it was insisted, by way of proving his quality, that certain maimed fragments of his work should be set before the public; this too in spite of his earnest protest, that upon the stage, and on the stage alone, could his music be produced with effect. And though wise ones shook their heads and pronounced it sorry stuff, still it was pretty generally held that the music of the future had not had a fair trial. Of these dissentients had been the *voyageur*, now earnestly studying the *affiche*. He too had borne his part in the fray; and he held it for a wonderful dispensation that he was thus privileged to sit in judgment on this famous music.

Turning, then, hostelwards, he once more bows beneath the shadow of the great king. The great king will have dinner for his liegemen in a bare ten minutes or so; and, by way of helping on the time, the *voyageur* beguiles the

moments by affable converse with a vivacious *kelner*, or serving-man. "Yes, a famous theatre," says the serving-man, gently moving the *épergne* a shade more—say the eighth of an inch—towards the centre of the table;—"a very famous theatre. Ah, had monsieur been in town but a month since! They played *Tünnenhäuser* then—Wagner's opera. *O la belle musique!* By the way, they play *Lohengrin* to-night; did monsieur know?" He himself, the serving-man, will be there, if he can but get away. Such strange burst from out the waiter-world sets the *voyageur* musing.

A few moments more, and in come trooping the great polyglot flood—the *haute volée* of wanderers—graf, comte, baron, and my lord, as per morning's *fremdenblatt*, or news-sheet of arrivals. In come the flood of gentiles, and sit them down silently at the feast provided by the great king. Here are triumphs of Gallo-Germanic *cuisine*, syren-like *entremets*, compounded with infinite skill and cunning, and luring the unwary to tempestuous nights and bilious horrors,—with wines choice and fragrant, to make glad the heart of Gourmet. And so the feast makes progress in lively fashion enough, until some begin to rise and drop away by degrees, the *voyageur* with the rest, who lights him a gentle weed, and goes forth to enjoy an evening stroll.

By seven, he has made a circuit round a kind of infant *boulevard*, one very stunted and sickly, and finds himself standing under the porch of the Stadt-Theater. There is no crowd, no *queue*, as in the French theatre, and every one receives his ticket at the same bureau. Taking one for the *balcon*, the *voyageur* finds himself treated with distinction, and is led away up lonely stone flights, dimly illuminated, to be set down finally in the very front row of the *balcon*. Settling himself with care for the night, and laying open before him his libretto—his little book (*bookken*, would say the Irish)—the *voyageur* bethinks himself of taking a look round the house.

There are not very many gathered together to hear the weird music of Richard,—at the outside some two hundred, —*parterre* and *parquet* (that word will read like *parroquet*) being decently sprinkled. Sprinkled, too, among the heads, may be discerned divers leathern helmets, with the eternal brass spike; no doubt significant of the presence of his majesty's troops, who assist (professionally, alack!) at all performances.

But lo, the *chef*, all begloved and kempt, has entered the orchestra, and is carelessly turning over the leaves of his score, simpering pleasantly right and left upon his following. Anon a tingling sound is heard. *Chef* takes one last look round him, and raises his *bâton* aloft. People murmur "Hush!" and settle them in their places; and in a moment more the music of the future is abroad, and floating to all ears. The *voyageur* hearkens greedily.

First high up, very high upon the violins (all furnished with their mutes), there steals forth a thin delicate thread of sound—a low trembling cry, as of an infant; but so soft and tender, that people bend forward eagerly, as through fear it were about to pass away from them altogether. By and by it glides gently into a strange weird-like phrase,—for air it is not,—very wayward and fitful, and which may be termed the Dying Fall. For many times, and in many shapes, it recurs, stealing in after the same insidious fashion. This, too, still floats from the violins alone, from the same airy height. Then follows for a minute or more a phrase of a colder sort, curiously interlaced,—dry nourishment, as it were. Now does a viola drop in quietly, and perhaps an oboe. The stream begins to swell, and so glides in once more, in fuller measure, the dying fall. Sinking, swelling, it rolls on its course, dropping, as before, into the more earthly strain, wherein it seems to lose itself and be confounded. A little interlude, as it were, of slow intricate measures, and a stray note from the horn comes abroad. Clarionets, flutes, bassoons, begin to wake up, and lo, breaks forth again, like the sun from the clouds, with drums and trumpets sounding, and riotous clangour, the old refrain

of the dying fall. Only this time it is borne away upon the violoncelli, by them swung aloft triumphantly; whilst the violins perform fitful dances and elf-like measures round it. So the wild reel speeds on, until at last there comes a lull. Gradually drop away, one by one, trumpet, oboe, clarinet, bassoon, until at the end of all is only left the first delicate thread, fluttering softly as at the beginning. A moment more, and that too has passed softly away; nor can those who listen discern the moment of its passing. So endeth the *proem*, or overture, to the weird music of the future.

Unanimous bursts of approbation from every part of the house; and while the *voyageur*, utterly ravished with delight, is opening his book of poesy at the first page, the curtain floats upward slowly. But let him not too hopefully lay the delusive unction to his soul, that all will prove of the same enchanting quality. *O si sic omnia!* will he aspirate sadly within himself long after, recalling those magic harmonies. Such morsels are only so much nourishment for the weak, vouchsafed them by the prophet, lest they faint by the way. Meanwhile the stage is seen to be peopled with warriors armed with spear and shield, gathered for council in a green wood. For it is to be an ancient legend, from the old heroic times, bearing strong tint of that bit of Irish *diablerie* known as O'Donoghue of the Lakes. Now comes forward a warrior to the foot-lights, and begins to declaim, as it seems to the *voyageur*, touching the condition and prospects of one Heinrich the Fowler, then present; and this in a sort of half-recitative, half-Gregorian measure, like nothing so much as a snatch from the old Marcelline Mass. Every one listens curiously; these bald barren chords were certainly novel, in shape at least. Introduction, no doubt, all this. But soon five, ten minutes have passed by to the same monotonous chant, and an uneasy rustle flutters over the *parterre*. Still does the warrior go bravely onward for an inconceivable span of time,—for a good quarter of an hour by *voyageur's* watch,—and by and by is relieved by the Fowler striking in with a mystical observation, but only for a moment; and the intrepid warrior again takes up the Marcelline chant for another quarter or so. The *voyageur* feels weary, and has strange misgivings. This he sets down for so much psalmody, given with better effect in the great Dom at vesper-time. But hark! Relief is at hand. Already bright snatches of melody are hovering fitfully around the rude psalmody. Life-blood begins to warm up in the frozen instruments; there is a tremulousness abroad, as though some stirring crisis were at hand. The rock has been smote, and the stream comes gushing forth; and lo, the warriors, turning their faces to the audience, have burst into a mighty hymn, thrilling, soul-stirring, and welcomed gratefully by all, as a very spring in the desert. The *voyageur* looks up thankfully, and feels a thrill over him; for now the soft theme of the overture is being worked in most magically; then does it subside once more very dearly into the old psalmody.

And so, in this checkered fashion, does the opera move onward, a yarn of tangled good and evil commingled. Only the dreariness sensibly abates, and these high poetic bursts come more frequently. At the end of all, steals in for the last time that fairy strain of the beginning, but strangely altered—orchestra softly bearing it on below, while Lohengrin, the elf-king, now departing for his watery kingdom, and taking long and last farewell of his earthly mistress, chants another despairing strain, which chimes in curiously with the old dying fall. And when the curtain has fallen to a storm of applause, and the *voyageur* is wending homewards towards the great king, he bears with him, as *souvenir* of the famous opera, a confused sensation as of mysterious tremolos, checkered with chilling chords of brass—of long shapeless phrases, unbalanced and fragmentary—of wild snatches of melody, most passionate, most despairing—of notes shaped to resemble unearthly shrieks, of instruments borne into unwonted prominence, of utter absence of all airs with natural conclusion—in short, of a strange unheard-of miscellany, bearing much of good and

evil. And yet as he meditates over these things, sitting in reverie at the public fireside before going up to bed, that *voyageur* could not shut out from himself that this effort, though crude and ill-fashioned, and going further than was intended, held in it great element of reform, and was full of promise for the future. He afterwards studied in the book of Wagner (for, in Mormon fashion, the prophet has given written testimony to his disciples), wherein the philosophy of these matters is set forth and expounded. And as there is much that is unreadable, not to say unintelligible, which is like enough to scare away readers from the sounder portions, the *voyageur* has brought together such broader notions of the doctrine as would give a fair idea of the new religion. This may be done in a very few words. And first, to see what error there lies in the present system.

"Let any one think within himself what ought to be the true meaning and compass of the word 'opera.' It might be roughly defined to be a tale of passion, wherein music instead of language is adopted as the medium of expression; the music, it will be observed, being no more than a means, and subsidiary to the story. Without going further, it is plain enough that opera, as at present constituted, by no means falls under this definition. The music has been made the chief feature, the incidents being held for so many convenient pegs whereon to hang the composer's melodies. The progress of the drama is, moreover, being perpetually suspended to admit of the singers advancing to the footlights, and delivering themselves of *arias* and musical *entrechats*, which are but so many 'excrecences on the action. Again, the music has usually no special fitness for any particular crisis or passage; the composer's aim being, to produce music that will stand of itself, and bear translation to the *salon* or concert-room. Many such pieces, therefore, especially those of voluminous writers, might be transposed from opera to opera with little loss of effect. These are the crying sins of opera in its present shape, which is, indeed, not opera at all, but only a spurious kind of medley, which people, from custom, are willing to accept as such.

In this shipwreck, as it were, of true principles, the new teacher comes forward with his *projet*, which is for the most part simple enough, though mixed with many extravagancies. He would have the story and music linked inseparably together, the one to grow out of the other. Therefore, should the composer choose his *libretto* with exceeding care, and not set to work in true journeyman fashion upon the first presented to him, and so proceed to spin airs, trios, choruses, and the rest of it. Better still if he can write a drama for himself, and let music and poesy rush forth together at the same moment from the one brain: for there is poesy in music, and music in poesy, and the soul that is teeming with bright images and celestial fancies may find its expression in the one full as well as in the other. The *maestro* is poet with as much justice as his brother, who is, as it were, titulary so now. Let him, then, seek out something fresh and original, something that has touched his own heart and filled him with enthusiasm, and not shuffle together again the old ingredients. For hitherto what have been the elements of every opera, save these three—the *donna*, the lover, and a third party taking the shape, as wanted, of husband, rival, or cruel parent, who may be, therefore, justly styled the Impediment? What has been the course of all such drama but either the gradual *éloignement* of *donna* and lover through the agency of the Impediment, he standing over them at the close in true Nemesis-shape, or else their final and happy *rapprochement*. With utter confusion of the Impediment? So it comes, over and over again.

Further, must all superfluous *arias* and footlight *cabalettas* be ruthlessly lopped away: for what have such to do with the action, or how can they help it forward? All this music-speech must have its duty, and express something. And who will gainsay the prophet thus far? But after this, he drops into subtle speculations too paradoxical for general acceptance. For he would have it that music

is but a step beyond language, that it is but language sublimated; that ideas, things, in short, all manner of thought, may be conveyed by musical tones. All this is striven to be established by taking analogies from the musical character of the five vowels; from the iotus, or beat, in poetry; from gesture, a musical accompaniment as it were of speech; from emphasis, common alike to prose-speech and music-phrase. With such devices does he try to bridge over the broad gulf—fruitlessly it would seem.

Still it must be conceded, that for the more broadly-marked passions music is fully adequate as a means of expression. Joy, triumph, rage, horror, grief, devotion, may be thus directly conveyed; whilst others less tangible may be faintly shadowed forth through the same medium. With such for its subject-matter, music, though conveying nothing of itself, still has the effect of bringing the mind into congenial frame, into suitable tone. It will be remembered how happily this idea has been caught at upon the Parisian boards, where, in certain melodramas, the orchestra softly accompanies the spoken dialogue throughout; and in a famous spectacle, not long since presented at the Porte St. Martin, "Paris," wherein all the circle of conflicting passions were illustrated in this fashion, seemed to be dimly shadowed forth a new ideal of opera, a revival of stern Hellenic tragedy; perhaps what prophet Wagner was dreaming of, after all. For, from the beginning to the end, without intermission, did soft strains float from the orchestra, through which could be heard the melodious accents of the players.

Such are a humble rover's thoughts upon this matter, together with a plain account of what he heard in the city of Charlemagne.

CORRESPONDENCE.

MADAM,—As I object strongly that the smaller members of our community (to say nothing of the larger ones) should be blown up, or otherwise injured, by playing with a dangerous toy, I am constrained to address a word of admonition to you respecting the vulcanised indiarubber globe-balloons so prevalent of late. A somewhat excited discussion has been going on in the columns of the *Times* newspaper respecting them: one set of correspondents pointing out their danger in no measured terms; others denying that they are dangerous; the manufacturer, on his part, soliciting people to go to his place of business and see them made. This is accomplished by injecting small bottles of vulcanised indiarubber with a gas lighter than atmospheric air. The gas alone, though always inflammable, is not explosive; but if it become mixed in any way with atmospheric air, an explosive mixture results, precisely analogous with the fire-damp which works such destruction in coal-mines. Now it is a well-known fact, that a gas cannot be retained pure in a mere membranous envelope. However perfect the walls of such envelope may appear to be, there are little pores, imperceptible to the eye, through which gaseous permeation will take place; and the curious point is, that the permeation is not all one way; portions of the gas will come out, and portions of the external air will come in. When a certain portion of atmospheric air has entered, the toy will be, there is no doubt, a highly dangerous thing, capable of giving rise to the most fearful explosive effects, if by chance ignited.

Independently of the explosive danger attendant upon these balloon-toys, there is another. No sooner has the

globe been punctured, and all the gas escaped which it originally contained, than a child will probably try to inflate it by air from his lungs. This involves applying to the mouth a dangerous poison. All circumstances considered, these balloon-toys are to be treated with the highest degree of circumspection.

To the Editors of the National Magazine.

SEEING in your Magazine a letter headed "An Aquarian in Trouble," I beg to send you the following account. My brother and I last year bought a 14-inch bell-glass for 3s. 9d., and a stand for 3s. 6d., which we placed in the drawing-room window, looking north-west, and proceeded to stock it. We first placed a piece of rockwork and a few shells at the bottom, and then filled it with river-water to within an inch of the brim; we then put in our live-stock, consisting of six gold-fish, four minnows, and one dace, the largest fish being only about four inches long; we also put a dozen snails in. We next proceeded to the Surrey Canal, and with our hands pulled out a quantity of Canadian weed, which we made into two or three bunches, and sank in the aquarium by tying a stone to the end of each. We then bought three feet of gutta-percha tube for 9d., and half a foot of very small tube (for the sucker), and made our syphon for the small sum of 10d.; whereas if you buy a syphon they will charge you 2s. 6d. for it. Now we have had this aquarium in action nearly a year, and have not lost a single fish. We every other day take out a little of the water, replacing it with fresh; and regularly every Saturday take out all the fish, and clean the glass thoroughly. Though there was no fire in the room during the late cold weather, the water never once froze, the only trouble being, that the snails would not do their duty. Now as to being adepts, you may guess from our ages, my brother being fifteen and I seventeen when we commenced, that we did not understand much about gold-fish, having never kept them before.

I am, &c.

A. C. L.

IMPROVED FLOWER-POTS.

Of all the implements of horticulture, the flower-pot has been least studied with a view to improvement. To be sure, the common pots are not inelegant, and ordinarily fulfil the conditions required of them; they are, in fact, as acceptable as ever. Still, considering the variety of modes that have to be adopted in the culture of plants that differ widely as to habit and constitution, there ought to be ten or twenty kinds of pots more than there are at present. To be as brief as possible, let me call the reader's attention to a newly-invented contrivance, which will be found of great service from this present moment till the end of the summer. It is called "Pascall's Patent Propagating-Pot," made and sold by Mr. Pascall, of the West-Kent Potteries, Chislehurst, Kent.

Fig. 1 represents this pot in section. It is in shape shallower than an ordinary pot; it has a rim round it to receive a bell-glass, a hole as usual for drainage, and the material is a very fine clean-looking clay-ware that looks well even on a drawing-room table.

The uses of this pot are manifold. Suppose you have a number of plants from which you wish to take cuttings; you throw into the pot a handful of crocks for drainage; then fill up with light soil in which there is a large proportion of silver-sand mingled; press all firm, water freely, and leave to settle. The cuttings are then taken off; firm, woody, well-ripened, short joints being usually the best. The leaves are trimmed off neatly, with the exception of two or three near the leading bud, and the cuttings are put in all round the pot, every one of them touching the inner edge of the pot next the surrounding rim. A little silver-sand is then strewed all round the rim, and a bell-glass to fit is pressed down into the sand; and from that moment ten

to one if you need touch them again till they are rooted. Now this cannot be done with any ordinary pot; for the great secret in striking cuttings is, to have them touching the pot inside, where they root in half the time they would do if placed towards the centre; and if a bell-glass be pressed into the mould in a common pot, it is of course impossible to have the cuttings touching the pot itself. So far, these pots are of great value for striking cuttings of all kinds of choice plants,—heaths, fuchsias, calceolarias, pelargoniums, pansies; in fact, almost every thing that comes from cuttings. In syringing, whatever superfluous moisture may be given will rise and condense on the glass, and will trickle down away from the cuttings into the groove, and so escape altogether.

Besides their use in this way, these pots are a sort of extemporaneous Wardian Cases (fig. 2), in which the most delicate ferns, such as *Hymenophyllums*, *Trichomanes*, and others that cannot be grown except in a close moist air, may be brought to fine perfection. Used in this way, they form admirable window ornaments; and as they are made in sizes from four to twelve inches, the choice of plants for them may be extensive. *Dionaea muscipula* is a charming thing for the window, grown in one of these pots under a bell-glass; so is *Cephalotus follicularis*, the New Holland Pitcher Plant, which succeeds admirably in a compost of peat, chopped moss, and broken flower-pots; the glass over it being wiped dry, and a little air given daily. Delicate ferns may be so grown; and if the pots are surfaced round the ferns with *Lycopodiums*, and a little air given occasionally, a very pretty collection may be made for a most trifling outlay.

Another invention of Mr. Pascal's is the Sea-kale Pot (fig. 3), which is used for forcing and blanching sea-kale, rhubarb, or any of the salads which require to be blanched. The Sea-kale Pot is made on the plan of the Propagating-Pot, but instead of being covered with a glass-bell, it is covered with an opaque pot, which secures perfect darkness to the plants. This pot measures eleven inches in height, and thirteen inches across, from the opposite edges of the groove. If not wanted for sea-kale, a quantity of strong roots of the common dandelion might be potted into them, in leaf-mould and sand, and the darkening cover put on. If placed in a warm cupboard, or plunged in a gentle hotbed, the leaves would push quickly, and grow to a length of eight or ten inches, beautifully blanched, and forming the most delicate spring salad that can be eaten. This is the salad sold at Covent Garden under the name of "Barbe de Caputhin," and a famous thing it is both here and in Paris.

Long ago, Sir Joseph Paxton, in the *Magazine of Botany*, suggested that the ordinary garden-pot might be improved by having, instead of one hole for drainage, a number of holes pierced all over the bottom; for it might be remembered that we not only require to get rid of superfluous moisture, but to allow air to circulate amongst the roots of plants; and the want of air is often as much injury to the plants as being pot-bound or water-logged. Now any one may make an improved ventilating-pot out of a common garden-pot by inverting over the hole in the bottom a small thumb-pot, so as to form a hollow cone immediately under the root of the plant. (See fig. 4.) Many florists adopt this plan in potting, and it is made a bit of a secret of by some

who grow flowers for exhibition.

Another improvement is, a pot made to stand on feet, or rather the sides of the pot are continued about an inch below the bottom, so as to form a rim, and this rim is divided into segments to allow the water to escape (fig. 5). It will be noticed that if pots stand on a flat surface a considerable quantity of water is apt to lodge beneath them, so that when lifted we find a little pool. Now there is nothing more destructive to plants in pots than water stagnating about them. Even moisture-loving ferns will not stand it; so that, however we may drench the plants, there must be ample drainage to carry away what is not absorbed by the foliage and the soil, and these pots on feet are just the things to

do it neatly. Any pottery would turn out pots of this kind to order.

We are in great need of ornamental pots for suspension; and we also want a pot made expressly for the growth of aquatics. Since ladies are partial to ornamental pots, I must here caution them against using any kind of porcelain or hard material, except as mere ornaments. A choice plant in a common porous pot may be dropped into an ornamental pot, and a little moist moss tucked in between the two, and do well; but if potted into any painted, varnished, or glazed receptacle, it will speedily perish through non-admission of air to the roots. Some ornamental pots are of porous material, and then they may do for the actual growth of plants; otherwise let the plant remain in a common pot, and find an ornamental one large enough to receive it.

To grow aquatic or amphibious plants in pots is a very simple affair. Take two pots, one of a size to fit loosely within the other. Into the drainage-hole of the largest insert a cork, and with a sharp knife cut off the cork outside flush with the bottom of the pot, which will enable it to stand firmly. Then fill the smaller pot with the proper soil,—chopped moss and peat is generally the best for aquatics; sow the seeds, or insert the plants into the soil, and then drop the small pot into the larger one, and fill the space between them with moss. You can now give any amount of water you please, either to keep the soil moderately moist, or to preserve the plant constantly in a pool. In this way I raised a number of plants of *Alisma plantago*, of which I distributed seed last autumn. I sowed the seed in pots so prepared, and set them in a Waltonian case till the plants had two leaves a-piece; then hardened them off, potted them singly in the same way, and now I have a stock of strong specimens for the aquarium. *Thalia dealbata*, *Valisneria spiralis*, *Myosotis palustris*, or Marsh Forget-me-not, Water-soldier, and many other choice aquatics, may be grown in the same way.

The suburban potteries are by no means up to the mark in the manufacture of garden-pots. At Kew Gardens the choicest plants are in pots that come two hundred miles, though Kew is surrounded by potteries. In fact, if we want large pots to hold superb specimen-plants, the Weston-super-Mare pots are at present the only ones that are to be trusted; and I advise those who have plants they prize to pay the extra expense of carriage, as they do at Kew, rather than risk plants of large growth in pots that may fall to pieces as soon as they are filled with roots.

THE ROMAIC BALLADS.—No. III.

By PROFESSOR BLACKIE.

We shall conclude our short selection of voices from the living Greek people by some ballads of a miscellaneous description.

Those who have read Dr. Finlay's classical works on the history of Christian and medieval Greece will have brought with them a strong impression of the completeness with which all heathen reminiscences have been swept away from the tablets of the national memory. In the popular literature of the Teutonic nations many characteristic elements of the old mythology remained; and, being incorporated with Christian doctrine and sentiment, formed that motley texture of which we still have so many quaint and significant examples in the *Volks-bücher*, or chap-books of the Germans. But in the Romaic ballads the heathen element is almost null; and if there are certain customs and usages among the modern Greeks manifestly derived by direct descent from the classical times (as in the case of the well-known *χελιδόνισμα*, or swallow-song, sung to welcome the spring), these have maintained their ground more from the deep human feeling out of which they spring than from any thing characteristically Hellenic that they preserve. Almost the single reference to the classical mythology that the modern popular songs contain is in the person of CHARON, the grim old ferryman, with "terrible squalor" and "ferruginous boat," whom we all know from Virgil. This personage appears in the Romaic ballads as the impersonated god of death, performing the same functions as the grinning figure with scythe and sand-glass so often exhibited on the tombstones even of those extreme Protestants who are most afraid of the worship of images. Take the following speci-

THE SHEPHERD AND CHARON.

A brisk young man came o'er the hills, with light and lively tread;

His hair was curled, his fez was nicely slanted on his head.

Him Charon saw with jealous eye from a lofty mountain bare, Then to the narrow pass came down, and waited for him there.

"Young man, young man, whence comest thou, and whither dost thou go?"

"From pasturing my sheep I come, and to my home I go; I go to fetch a loaf of bread, then backward wend my way."

"And me, young man, the Lord hath sent to fetch thy soul this day."

"O, Charon, Charon, let me live! this prayer I pray to thee;

A young and lovely wife is mine, a widow she may not be. If she with lightsome step shall walk, they'll say the widow's naughty;

If slow and soberly she go, they'll say she's proud and haughty. A troop of children dear is mine, orphan'd they may not be!"

But stiffly, stiffly Charon stood, no ruth was in his eye.

"Charon, sith thou hast will'd it so, and wilt not let me go,

We'll wrestle here till I shall win, or thou shalt lay me low;

Then, Charon, if thou conquer me, my soul is in thy hand;

But, Charon, if I conquer thee, I'm free from thy demand."

From morn till afternoon they fought, with mickle sweat and pain,

But at vespers the youth was down, and never rose again.

There is a tone of strange familiarity about this encounter with the general enemy that recalls to our mind a rude sculpture in a Scottish churchyard, described in one of his graphic pulpit-discourses by Dr. Guthrie, of Edinburgh, in which the deceased person is represented as shaking hands with the grim king of terrors, whose broken dart is lying on the ground beside a skull. Religion had turned defeat into a triumph; and the mortal, now clothed with immortality, was exchanging a friendly greeting with the last and greatest enemy of man as with a familiar friend.

The Greeks have always been great sailors, from Phormio down to Miaulis; they have never wanted great sea-captains of whom it would have been an honour to any Pindar of the people to sing the praises. It would be strange indeed if we did not find some traces of this sea-life in the popular songs; but there is manifestly—by what chance were vain

to inquire—a want of the British vigour and lustiness in the Romaic associations with the sea. There is not a single echo of Dibdin in our whole collection. On the contrary, the few sea-ballads that we have are of a decidedly pathetic character, and look upon the mass of briny waters only as the great divider of family bonds, and the destroyer of maternal hopes. Witness the following:

THE SAILOR.

Hast thou a daughter fit to wed, then choose, to wed thy daughter

ploughs the water.

Hard is his life and full of toil that risks the briny billow;

Upon a sapless crust he dines; he sleeps without a pillow.

When in the dark fore-castle sick he lies, and sharp pains rend him,

No mother sits his hammock near, no loving wife may tend him,

Sister and brother both are far, no soul is near to love him.

Only the captain and the mate with angry words reprove him:

"Come, rouse thee, rouse thee, lazy loun, 'tis now no time for lying!"

Come, count the hours, and shew thy skill; the harbour we are nighing."

"Ye bid me rise, but I am sick, ay, sick and near to dying."

Come, raise me up, that I may rest upon my elbow lightly,

And take three towels cool, and bind them round my temples tightly;

And round my head this kerchief, wove by one that loves me dearly;

Then spread this luckless chart of mine. The course I'll tell you clearly:

This mountain, stretching here and there, where sable storms assailing—

Assault the peak, and long white mists around its base are trailing,—

Here land; the harbour there is deep; to the larboard throw your cable,

And cast your anchor to the south, the ground is sure and stable.

I pray thee, captain, and sir mate, for Christian love, I pray thee,

Not in the church my body lay, nor in the cloister lay me;

But on the rim of the pebbly shore, and where the waves are beating,

That when my comrades pass I may be near to catch their greeting.

Farewell, farewell, my comrades brave, that with me late and early

Oft raised the dear familiar shout, 'Yo-ho, boys, yo-ho yarely!'"

He spake, and closed his swimming eyes, and saw the day no more.

In a yet more melancholy strain is the following:

THE MOTHER'S LAMENT.

Whoso would hear the dark lament, and the dismal cry of the mourner,

To Moroa's cities let him go, and list at each street-corner.

There weeps the mother for the son, and the son for the mother is weeping;

They sit and look out on the shore, their watch at the window

Like partridges they droop their heads, like ducks their feathers tearing,

And sable as the raven's wing is the robe that they are wearing.

They sit and watch the light-wing'd barks that travel o'er the sea.

"Ye mighty ships and little boats that travel o'er the sea,

Say, have ye seen Joannes mine, the son that's dear to me?"

"And if I saw Joannes thine, how should I know 'twas he?"

Give me a sure and certain sign, I'll tell the truth to thee."

"A tall and slender youth was he, and tall as a cypress-tree;

He on his finger wore a ring, with a jewel fine and fair,

But his finger shone more fair and fine than did that jewel rare."

"Just now on Barbary's sandy shore we saw thy dear son lying,

White birds did eat his flesh, and sable birds were round him

One only bird, a kindly bird, to eat his flesh was shy;

Then spake he to that kindly bird, with parched lips and dry:

"Peck, pretty bird, the shoulder-blade of a strong and valiant man,

'Twill give thy wings an ell of growth, 'twill give thy nails a span;

Then will I write upon thy wings three letters; to my mother

The first shall be with woe's full news, to my sister dear the other;

The third, the last, to that dear maid whom in my heart I keep;

And when my mother dear shall read, my sister dear shall weep;

And when my sister reads, the maid that in my heart I'm keeping
Shall weep; and when she reads, the world shall echo round
with weeping."

We would direct attention in this ballad to "the slenderness" of the young sailor as being one of the most striking characteristics of the present race of Greeks. Not unfrequently, indeed, this national light elegance of form becomes a deformity, when conceited young gentlemen in the metropolis lace themselves tight about the waist (like some of our military bucks), the wasp-like tenuity of which is made more obvious by the contrast which the flaunting breadth of the many-folded white kilt presents. But when not pushed by artificial means into caricature, there can be no doubt that the slenderness of the Greek figure, as contrasted with what we are accustomed to see in this beef-eating country, is not at all unmanly; since it is a necessary accompaniment of that wonderful litherness and flexibility, both in mind and body, which has always been a prominent characteristic of the Greek race. A poetic preacher of some notoriety, now dead, said that there was something "elephantine" about the Scotch. In the same style of national portrait-painting, we may say that there is something serpentine about the Greeks.

The following ballad exhibits what is no doubt a picture, taken from the life, of one of those tragic encounters that arise out of the brigand-life to which the Greeks have been so long accustomed.

THE BROTHERS.

A merchant-man came down the hill, a goodly man to see;
A goodly train he had with him, twice twelve strong mules and three.

Right in the middle of the road, stout robbers met him there,
And seized his mules, and to unload his wallets they prepare.
"O spare my sorely-burdened mules, good sirs, I you implore;
With loading and reloading them so oft my breast is sore."
The captain of the band was wroth, and thus he stands and says:
"Thou dog, thou harlot's whelp! Mark this, not for his life he prays,
Not for himself, but for the mules he loves so tenderly.
Come, strike like men, my gallant boys!" the captain he did cry;
"That where he gets the blow from you, the craven there may lie!"

The robbers they did pity him, when they his mottle saw;
The captain like a lion rushed that comes with hungry maw,
And plunged his dagger in his side. The merchant bleeding lies,
And from a burden'd breast he sobs, and sobbing, thus he cries:
"O father mine, O mother, where art thou to weep for me?"
"Who is thy mother, merchant-man? To her I'll write for thee."
"My mother she from Arta came, my sire's in Cretan land,
My eldest brother left his home, and joined a robber-band."
The captain trembled. In his arms he bore the bleeding man
To where the cunning surgeons were, and thus to speak began:
"Full many a sinking life ye saved when grisly Death was near;
This gallant youth save with your skill: it is my brother dear."
"Full many a sinking life we saved of wounded human kind,
But such a gaping wound as this no skill of man may bind."
The brother to the brother spake, with fainting speech and low,
"Now take these mules, dear brother mine, and to my father go."
"How can I to my father go, and say to my sonless mother,
The master of these mules I slew, and the slain man was my brother?"

The following serenade from Thessalonica (now called Saloniki) is simple and pretty.

SERENADE.

At Saloniki's gate there sat
A manly youth and fair,
And nicely trimmed his curling hair.
A tambour in his hand he held,
And as the tuneful numbers swelled,
"Twas thus he sung and said:
"Thou golden window o'er my head,
Thou lattice trim and neat,
Go tell thy mistress coy and sweet
To steal a glance into the street,
That her dark eyes and mine may meet.
No dragon am I on her to sup;
No wolf to eat her up."

We conclude with a piece which, for fine dashing fire

and wild adventure, puts us in mind of Burger's famous ballad of "Leonora," with the terrible chorus-burden, *Hurrah, die Todten reiten schnell.*

THE ABDUCTION.

As I was sitting, and ate my bread beside a marble table,
My black steed snorted loud, my sword within its sheath was rattling.

What means this sound? I know too well; they're marrying to another,
They pledge to him and not to thee, the fair maid whom thou

The bridal blessing waits for him, for him the wreath is waiting.
I'll go, I'll go to my black steeds; I went to my five and seventy.
Of all my seventy and five black steeds, when I shall mount him,
Which to the east, with lightning's speed, which to the west will bear me?

My black steeds knew their master's voice, and poured a bloody urine;
My mares all knew their master's voice, and cast their foals for sorrow.

One steed there was, one old black steed, with forty wounds scarr'd over:
"I'm old," quoth he, "and gaunt to see, and my limbs are stiff for racing;

But for the love I bear thy love I'll stretch my limbs in racing.
She in her rounded apron spread the daily corn that fed me;
She in her white and hollow hand held water for my drinking."
Swiftly he saddles his good black steed, and swiftly away he rideth.

"Now, master, bind around thy head three ells and four of linen;

Not like a dainty cavalier ride nicely on, but spur me;
Else in my veins young blood may mount again, and I will cast thee,
And dash thy scatter'd brains nine ells upon the grass around thee."

He gives the whip to his good black steed; four times ten miles it rideth:

He whips again, his good black steed rides five good miles and forty;

And as he prick'd along the road, to God he pray'd in heaven,
"Great God, my father may I find where he his vines is trimming!"

He like a Christian pray'd the prayer, and like a saint was answered;

And found his father dear forthwith, where he his vines was trimming.

"God bless thee, honest graybeard! say, whose vineyard art thou trimming?"

"Wo worth the day, it is my son's, my evil-starred Joannes!
This day they've ta'en the maid he loved to give her to another;
The bridal blessing and the wreath are waiting for another."

"Now tell me, tell me, shall I come in time for the bridal banquet?"

"The wightest steed that thou canst ride will bring thee to the banquet;

A steed that's not so wight will bring his rider to the blessing."
He gives his whip to the good black steed, and forty miles it bears him;

He whips again, his good black steed rides five good miles and forty;

And as he prick'd along the road to God he prayed in heaven:
"God grant my mother I may find where she the garden waters!"

He like a Christian pray'd the prayer, and like a saint was answered.

"God save thee, dame! and who is he whose garden thou art watering?"

"Wo worth the day, it is my son's, my evil-star'd Joannes!
This day they've ta'en the maid he loves to give her to another;
Another waits the bridal wreath, another takes the blessing."

"Now tell me, tell me, shall I come in time for the bridal banquet?"

"The wightest steed that thou canst ride shall bring thee to the banquet;

A steed that's not so wight, well spurr'd, shall bring thee to the blessing."

He gives his whip to the good black steed, and forty miles it bears him;

He whips again, his good black steed rides five good miles and forty.

The black steed neigh'd: the virgin knew what knight was come to save her.

"My bride, my bride, say who is he that rides so quick to greet thee?"

"It is my eldest brother brave, my bridal gift he brings me."

"If 'tis thy brother, crown the cup, and let him here be welcome;
 If 'tis thy lover, I will drown his light of day in darkness."
 "It is my brother, well I wot; my bridal gift he beareth."
 She went and took a golden cup, and crown'd it for his welcome.
 "Stand on my right, fair maid, and with thy left the wine be pouring."
 The black steed knelt upon the ground, and on his back she mounted;
 Then off they ride like wingèd winds! the Turks their guns are seizing.
 The fleet black steed they saw no more, and scarce the dust behind him:
 The Turk that had the wightest steed, he saw the dust behind them;
 The Turk whose steed was not so wight nor dust nor horse discovered.

Such are a few of those wild wood-notes from a neglected and half-barbarous people which still inspire with living breath and harmony the language which more than two thousand years ago served as an organ for the cosmical speculations of Plato and the patriotic protests of Demosthenes. If they are not remarkably original and brilliant, they are at least sure indications of the existence of a vigorous, healthy, and unsophisticated peasantry, of which a great nation may yet be made by a real "king of men" and "shepherd of the people," when he appears. Sir Archibald Alison is undoubtedly very far wrong when he talks of a restoration of the Byzantine empire as a thing to be dreamt of in the present generation: but the Romaic Ballads are living signals of hope, hung out by a people whose persistent vitality is evidently capable of many a remote and unlooked-for metamorphosis. Who knows to whom St. Sophia may belong in the year of grace one thousand nine hundred and ninety-nine?

NOBODY'S DOG.

By ANDREW HALLIDAY.

It was on a cold, dark, foggy night in November, as I was trudging homewards, encumbered by a fearful amount of great-coat, goloshes, and umbrella, that I was accosted by a large white dog. After some time, I perceived that he was looking up in my face, as if wishing to attract my attention.

"Pray, whose dog are you?" I inquired.

The poor brute looked up at me with a pitiful expression, and I read my answer in his heavy, beseeching eye:

"Alas, sir, I am nobody's dog."

"Poor brute!" I exclaimed, "I pity you, and would take you home, and give you supper and a dry bed in the cellar, if I dared; but I have a cross old housekeeper who hates your species, and whom even the footprint of one of your race on the door-step driveth to the verge of madness. Go along, sir!"

The dog took a backward jump, and retreated precipitately.

I soon fell into one of those musing moods which a walk through quiet and deserted streets rarely fails to beget in the least thoughtful minds. I gave way to thinking, and my thoughts were of dogs. There was no workhouse for dogs, as there was for Christians, and even pagans. If a dog lost his master, or was drowned, or fell into decay, what was he to do? He could not garrotte a baker in the street; he could not swindle shareholders, or chalk a mackerel on the pavement; he could not write begging letters, or advertise his distress in the papers; nor could he go to his fellow-dogs, and appeal to them with any hope of success. What could he do? He might possibly be able to rob a butcher's shop of a steak, but even then every thing would be against his getting clear off with his prize. Clearly the case of dogs in reduced circumstances was a very hard one, and something ought to be done for them. I was just thinking what that something should be, when I became sensible of a pattering sound on the pavement behind me; and on turning round, behold there was my white four-footed friend

close at my heels. Dear, dear! Well; after my philanthropic (or rather philocynic) theory about reduced dogs, I could not with any grace dismiss this canine waif until I had made some endeavour to mitigate his distresses. The brute seemed to start up to put me to the proof. Seeing, with the quick perception of his nature, that I was softened towards him, he approached nearer, and once more appealed to me with doleful looks.

"Poor dog!" said I; "you are doubtless hungry, as well as weary and cold. Come, I will do my duty towards you as a Christian, and give you something to eat. And with that I led the way into a tavern, the dog following.

"Now, nobody's dog, what will you have?"

There was quite another expression in his face now. The hang-dog look had vanished in an instant, and his eyes beamed with expectancy. "What will you have, nobody's dog?" He wagged his tail and smacked his lean chops, as much as to say, "Any thing, so that you give it me quickly." I tossed him half of a biscuit, which he bolted at a gulp. Another disappeared in the same way; but the eager hungry eye was still watching the motion of my hand. "More" was written there as plainly as "No Smoking allowed in this compartment" was written upon the partition which kept the scene of our refectory select. More he had; but never so much as a wink did that dog allow to obscure the watchfulness of that eager eye of his, until he had bolted four biscuits.

"Come, now, I think you will do, nobody's dog;" and going out into the street, I endeavoured, by flourishing my umbrella in a threatening manner, and otherwise conducting myself objectively, to make it understood by that dog that I conceived I had done my duty by him, and was resolved to be troubled no more. The dog retreated hastily, and seizing the favourable moment, I turned a corner and ran away. On reaching home, I found a comfortable fire in my room, and the faithful Mrs. Brown, my housekeeper, preparing supper.

"I have been bothered by a dog following me, Mrs. Brown."

"O, drat all dogs, I say," replied Mrs. Brown tartly.

"I really thought he would have followed me home, and insisted on my taking him in."

"Then it's lucky he didn't," said Mrs. Brown, flourishing the poker a little. "I hate dogs."

* * * * *

I had disposed of my supper, and had smoked my cigar down to the stump, when I was startled by a noise at the street-door, as of some one trying the lock. Presently the noise was repeated; and this time it sounded, I thought, like the noise of a saw. At that time of night, in a suburban neighbourhood, it was natural to think of burglars. I armed myself with the poker, and crept quietly out into the passage. "Who's there?" I called. No answer. Presently the scratching was resumed. "Who's there?" I called again. This time there was an answer, and it came through below the door in the shape of a low whine. A suspicion of the truth instantly flashed across me, and I at once undid the chain and opened the door; and there, on the door-step, covered with mud, dripping with wet, and shivering with the cold, stood, or rather crouched, that big, white, vagabond dog, whom I had congratulated myself on having got rid of for ever.

"What do you want now, you exorbitant, ungrateful, insatiable dog?" He whined and shivered pitifully, as if to remind me of the relentless rain and biting cold.

"Well; come in, you tiresome brute; it is a cruel night to be sure, and you appear to have had enough of it." I took that dog in, I wiped his feet for him on the mat, lodged him on some straw in the coal-cellar, and retired to rest with a sense of having done my duty that day, if ever I had in my life. I have heard that well-doing conduces to all kinds of happiness, even to sound sleep and pleasant dreams. I ought, then, to have slept well that night, and I believe I did; but whether I enjoyed pleasant dreams or

not, I cannot say; but I do know that I was awake next morning by a fearful row in the house. Bang, bang—get out—hi—bang, bang—got out—bang—yelp! I thought of the dog; and rushing to the door of my room, I discovered the good Mrs. Brown on the landing charging my *protégé* in a most savage and deadly manner.

"What's the matter, Mrs. Brown? what's the matter?" I shouted.

"A great, big, ugly, white dog, has got into the house," cried the agonised lady; "and he's been and left his marks all along the passage." (Bang—yelp!)

"Don't hurt him, Mrs. Brown; don't hurt him. I let him in; it's my fault." (Bang—yelp!)

Being now dressed, I hurried to the rescue of the innocent animal, upon whose devoted head Mrs. Brown's stair-broom was evidently taking lethal effect; but I could achieve little for the poor brute beyond a respite from the persecution of the broom. Mrs. Brown couldn't abide dogs; and with a declaration to that effect, she retired to the regions below.

I took nobody's dog with me into the parlour, designing, if possible, to awaken in his mind a sense of the trying position in which his importunate conduct had placed me; but while revolving whether instant elimination, enforced by kicks, would not be at once the most impressive and effectual mode of making myself understood, the faithful, but in this instance impetuous, Mrs. Brown, burst into the room in a state of great excitement, and cried,

"There! there's your protiggy!" In each hand Mrs. Brown extended a plate. On one reposed a roll of butter, on the other a bloater. The butter showed marks of teeth, and had a decided appearance of having been licked; the bloater was gnawed and mangled beyond even maternal recognition. There was an awful pause; and to a third party, I fancy the *tableau* presented at that moment would have been highly imposing. There stood Mrs. Brown indignant and accusatory; there sat I, overwhelmed, astonished, hurt; and there sat the vagabond dog, crouching on his haunches under my glance, with a look that unmistakably proclaimed him guilty.

"And look here," cried Mrs. Brown, turning to another clause in the indictment,—“look at the marks of his feet all along the passage and down the stairs.”

"Well, Mrs. Brown, what am I to do with him?"

"Drown him," Mrs. Brown said; and she said it from the bottom of her heart.

"O, Mrs. Brown, that would be cruel. No; I could not drown him; but I'll tell you what I'll do. I'll take him out and lose him."

"Ah, well," said Mrs. Brown tartly; "you'll lose that dog, or lose me, Mr. John—there!"

Did Mrs. Brown, my good, faithful, attached Mrs. Brown, contemplate giving me warning? The bare thought of such a thing armed me with resolution. I put on my hat and coat, and left the house, whistling the dog after me. Whither should I go? To what *terra incognita* should I bend my steps? In fact, how should I contrive to lose this troublesome dog?

I decided to be guided by fate, and set out, the dog following at my heels, apparently perfectly unconscious of my design against him. He trotted now before me, now behind me, looked up at me, wagged his tail, and occasionally stopped to say a word or two to other dogs; probably to inform them that he had found a master who had plenty of bloaters and butter in his cupboard, and that consequently he was now all right. Little did he think that the end and object of all his master's evolutions at that moment; his darting down by-streets and through the mazes of news, his sudden disappearances round corners and down alleys, his rushing in at the front-doors of shops and stealing out at the back doors, his getting behind hoardings and into sly enclosures,—little did that unsuspecting dog conceive that all this was the desperate execution of a deeply-laid plan for losing him, and throwing him once more upon the

cruel, rainy, foggy, sloppy, victualless, and bedless world, a masterless, houseless, hungry, mendicant, vagrant dog. But for some time my best and most desperate efforts were as vain and fruitless as if he had known my intent, and been watching every move to defeat it. At length, in the remote and unexplored regions of Islington a favourable opportunity presented itself. I seized it; and while the dog was engaged in a long and earnest confabulation with another dog, I jumped in at the open door of an omnibus, and the next instant was driven off. After a prudent interval, I ventured to peep out from behind the panel, but no dog could I see. I had eluded him at last; well, thank goodness!

I got out at the Bank, with the intention of proceeding onward by another omnibus. As the conductor tendered me sixpence in change, he said, "Is this your dog, sir?"

As I live, there was the dog again at my heels, wagging his tail and stretching his jaws as much as to say, "Am I not a clever faithful dog now, to discover my good master and follow him so far, and never once lose sight of him?" How was I to kick the brute, or strike him, with that innocent look of self-satisfaction in his face? I could not do it. Still I was resolved to commit the negative cruelty of losing him. Ha! should I hurry to the Thames, and pitch him in, take him by the scruff of the neck and fling him from the bridge into the—rolling tide? I was neither cruel nor melodramatic enough for that; and I think a sort of regret did pass through my mind at the time that I had not been born a villain. But, alas, I had been born a diplomatist; and diplomacy must be my weapon. I took a ticket at the steamboat pier, gave sixpence to an idler to keep back the dog, and rushed along the gangway to the boat. I was just in time; as I planted my foot on the deck the vessel moved off. Looking up to the shore, I saw the dog and the man struggling; the next instant, the dog broke from the man's grasp and rushed to the pier. He was too late. But, O, how shall I describe the feeling of mingled pain and pleasure which shot through my heart, as I saw that dog leap from the pier into the river and bravely breast the waves to follow me!"

A shout of admiration was raised from the boat and echoed back from the shore. A hundred eyes were upon the dog. The boat, which had shot straight across the stream for the purpose of turning, was now nearing the shore again, so that she came within a few yards of the spot where the dog was battling with the tide. The passengers now rushed in a body to the bulwarks to watch the noble swimmer. No one appeared more interested in the scene than the captain. His attention was so absorbed by the dog, that he appeared to forget all about his duties. There he stood on the paddle-box watching him. A sudden thought struck me, and I pulled the captain by the skirts:

"Stop for him, captain, he is my dog."

"That I will," said the man, in a tone of enthusiasm; and in an instant the order was given—"Stop her!"

One of the men threw out a rope with a noose at the end of it, and the next instant the dog floated over it, fell into the "bite" and was dragged on deck amidst a burst of cheers. I need not say that for the rest of that journey, my dog and I were the centre of attraction, the admired of all admirers. Every one had something to say to the dog, something to give him. As for myself, I think every individual person on the boat had a word to say to me. One man, more enthusiastic than the rest, who had rummaged his pockets in vain for something to give the dog, appeared quite unhappy until he had invited me to have something to drink with him when we got on shore.

I had forgotten Mrs. Brown, but Mrs. Brown had now to be faced. I could not part from the dog now. The very thought of having conspired to lose such a noble animal had become a sting in my conscience. I took heart of grace, and resolved to face Mrs. Brown at all hazards. I had never been afraid of Mrs. Brown in my life, not even in my youthful days, when that good lady had been accustomed

to invoke Bogie upon me; but on this occasion I am bound to say, that I stood on my own door-step, and knocked at my own door with a fluttering and misgiving heart. The door was opened by Mrs. Brown herself, and I entered, the dog following me. The good lady did not see the animal at first; but as she turned round from shutting the door her eye suddenly fell upon his white form in the full glare of the candle. I saw that she was about to demonstrate both by action and speech; but before she could utter a word or lift a leg I interposed.

"Don't speak, Mrs. Brown; not utter a word until you hear what I have to say." I led her into the parlour, placed her in an arm-chair, and sat down before her. I then related to her the adventures of the day. I threw as much pathos into the narrative as I was master of, and worked up the incidents to a climax quite dramatically I thought. Mrs. Brown listened to the end patiently, but betraying no emotion one way or other; and when I had done rose calmly, took up her candle, and left the room. When she brought up my dinner the dog was lying at full length on the rug; but Mrs. Brown's countenance was serene, and she uttered never a word.

For some time after his installation, the dog preserved a timidity of manner that gave me the idea of his being naturally of a retiring and modest disposition; but as he became accustomed to the place, and began to feel his *status* secure, this modesty and reserve rapidly wore off; and instead of crouching near me at the parlour-fire, as he had been wont to do, he now ranged about the premises at will. By and by he began to bark when people called; and it was not long before he felt it incumbent upon him to conduct himself offensively towards the tradespeople. He snarled at the butcher, barked at the greengrocer, and had several times sprung upon the baker so savagely, that I was led to suspect the man of bread of giving short weight. On making inquiry, I found that this was the case, though I was disposed to think that I should have found it so at any time. Mrs. Brown had been silent hitherto, but now she must speak. She came in one morning, fresh and floury from a dumpling, to say that the dog had got hold of the baker by the leg, and was worrying him alive. I hastened to the rescue, and found that this was so far from being the case, that the dog had only got hold of the baker by the corduroys; but these, it must be confessed, he was treating in a manner utterly regardless of their expense—I mean to the baker. I rescued the baker, and applied the salve of half-a-crown to his corduroys; but on consulting with his legal adviser, the man returned, and insisted upon five shillings, which I gave to save "further proceedings," though I was convinced that the corduroys could never, even in the full vigour of their prime and bad smell, have been worth half that amount. Mrs. Brown said nothing; but she evidently thought the more. I was now fain to admit that I had mistaken the character of the dog. He was clearly a vicious, mischievous dog, a dog to beware of. So next morning I chained him up in the washhouse by means of a clothes-line, officiously and offensively furnished by Mrs. Brown. I could now await the butcher, the greengrocer, and even the baker, with serenity. They came and went with safety both as respects their limbs and their garments; and I was just thinking of going to release the prisoner for a little recreation, when my intention was arrested by a loud knocking at the door, and presently a great deal of talking and shuffling in the hall. I hurried out to find a flurried group, consisting of Mrs. Brown, Mrs. Duckling, my next-door neighbour, and her servant, all talking at once loudly and angrily. Mrs. Duckling held what appeared to be a dead fowl in her hand, and this seemed to be the subject of the pother. What did I say to this? My dog had done it—had killed Mrs. Duckling's pet bantam, a little pet that she had cherished dearer than her life—the brute, the savage, the monster, the,—and Mrs. Duckling sank into a chair, sobbing and weeping bitterly. Then the maid took up the tale, and by the time she had done Mr. Duckling came in, and he began; and altogether there was

such a hullabaloo, that people began to gather about the door, expecting probably to see me arrested for forgery, if not murder. But Mrs. Duckling was not to be comforted. Nothing could compensate her for the loss of her darling pet; and as she repeated this over and over again, she fondled the dead fowl in her bosom, and basted its body with tears. Mr. Duckling, who was a more prosaic sort of person, insisted upon the market-value of the article, which he rated at ten shillings, which I gladly gave him to get rid of the exhibition which had by this time collected quite a crowded audience on the door-step.

But whatever hopes I had of the dog's reformation, they were soon destined to be dashed and disappointed. He had already, I found, acquired a bad repute in the neighbourhood; and it only required the affair of Mrs. Duckling's fowl to call forth public opinion respecting him. There was no end of complaints against that dog. He had stolen a chop, worried a cat, attempted to bite a boy, knocked over a child, and had done every thing bad that a dog could possibly do. In fact the dog had got a bad name, and I might hang him without judge or jury. But in grateful remembrance of the devotion and attachment which he displayed towards me on that memorable day, when he braved the tide of the Thames for my sake, I stood between him and his detractors manfully; and I would have stood between him and them to the last, had he not shortly afterwards handed me over to my enemies and his, by biting Johnny Smith in the leg. Johnny Smith's mother brought in the mangled body of her hopeful son and laid it on the hall-table. Mrs. Brown came in flurried haste to summon me with the intelligence that the dog had actually bit a piece out of Johnny Smith's leg. Mrs. Smith stood over the prostrate form of her son like a female Mark Antony, and eloquently exposed his wrongs and his wounds. As Antony lifted up great Cæsar's mantle, so Mrs. Smith turned back her son Johnny's trowsers, and pointing to his injuries, seemed to say, "See what a rent the envious rascal made." There was no piece out of the limb, however, though certainly the young Cæsar's blood had "rushed out of doors," to make the affair look ugly enough.

Mrs. Duckling's tears and lamentations were positively heart-rending, until the sight of a sovereign partially restored her. She then partook of a glass of wine and became quite cheerful. Johnny was taken to the nearest surgeon's, and I heard subsequently that he was seen in the course of the evening playing at chuck-farthing in his native alley. I may mention, however, that his wound (according to the report I had at the time) was a very long time in healing, and that a great many applications of golden ointment had to be made before Johnny Smith was finally restored to health. I now felt that in justice to my neighbours I must do away with my dog somehow. The damage done to Johnny Smith was not great, but it might have been greater, and something worse might happen before long.

As the body of Johnny Smith was carried out in the presence of a crowd of excited and sympathising neighbours, I resolved upon that dog's death. Hot with this resolution, I took down an old pistol and loaded it, calling the dog to follow me to his doom. He came bounding out to the little garden like a joyful martyr; and as I stooped to pick up the cap which had fallen from the nipple of the pistol, the unsuspecting brute came and licked my hand—"the hand upraised to slay." That unmanned me. No; I could not shoot him. I fired off the pistol against the brick-wall and rushed into the house. I could not, however, escape from a sense of the duty which I owed my neighbours. As society at large demanded the punishment and confinement of dangerous criminals, so that neighbourhood demanded that it should be protected from this dangerous dog. I tried to sophisticate the question by every kind of philosophical device, but I could not work out the conclusion, that I could still maintain that dog in liberty consistently with my obligations as a man, a neighbour, and a Christian.

That dog must die. Again I resolved it. I procured a deadly poison, and called the dog once more into the garden. I had a piece of bread in my hand and he followed me eagerly. He snapped up the pieces greedily. At length I threw him a piece into which I had worked a pinch of poison. He jumped at it hungrily, but he had no sooner caught it in his mouth than he dropped it, as if it had been fire, and retreated from me with a howl. I called to him to come back, but he ran towards the gate, and as he reached it, he turned upon me a look that I shall never forget. The next instant he disappeared.

Next morning, as I came down to breakfast, Mrs. Brown brought up a basket containing a hare, which had been left that morning by the Barnet carrier. There was the kettle hissing on the fire, and there was the newspaper airing on a chair; but where was my dog? He was sulky, I supposed, and would not come up. Breakfast had been cleared away, and the boy had come for the paper; but the dog had not yet appeared. I went to look for him. I searched upstairs and down, in the garden, in the washhouse. I whistled, I called; but there was no answer. Had Mrs. Brown seen the dog? Well, she had just seen him when she first came down, and he had gone out at the front-door when the carrier called; but she had not seen him since. The day passed, but the dog did not make his appearance; another passed, and then another, but still no dog. When a whole week had gone by without our hearing any tidings of the animal, I concluded that he had gone for good. I was willing to think, for good, happy to think, for good; for by his going voluntarily he had spared my feelings, and delivered me from a painful duty. Mrs. Brown ought to have manifested great joy, but she did not; and I fancy she was rather sorry to lose a comfortable source of occupation for her thoughts and temper.

Some weeks after this, as I was crossing one of the great thoroughfares, I happened to come upon the Barnet carrier as he was driving homewards. There was a white dog trotting underneath the cart, that, I thought, looked very like my old friend. The cart stopped to take in parcels at the booking-office, and I walked up to make a closer inspection. As I drew near, the dog turned round, saw me, and instantly came bounding to meet me. It was my old friend. How he jumped upon me and fondled me and sought my caresses! I was gratified, and yet I was not; for I was afraid he might own me again, and stick to me. As he had evidently taken up with the carrier, I was naturally anxious to hear what that individual knew of him.

"That dog, sir," said Mr. Bonnet, "ah, he is a run un. It's a curious history, sir, quite a romance like. Four years ago, that dog took up with me in the streets as I was a-joggin' on home,—came up quite promiscuously, and followed me right away to Barnet; wouldn't go away, no, not for the whip. And he stuck to me, that dog, sir, for near four year. But one dark foggy night, better nor three months ago, he got lost, or cut it on his own accord, somewhere about Holborn, and I went home without him. Never saw nothin' of him after that, until about a month ago, when I was up your way, and there I found him trotting underneath the cart, just as if he had never been away. Where he came from I can't say; seemed to start up like out of the earth. He appears to know you, sir; but there, that dog knows every body, he's any body's dog, I think."

"Or nobody's dog," said I.

"Good night, sir."

"Good night, Mr. Bonnet."

The cart drove off, and to my infinite relief the dog, after a parting leap upon me, ran after it. About a week after this, Mr. Bonnet had occasion to call on me with another parcel. I looked for the dog, but he was not to be seen. I asked Mr. Bonnet about him, and he said,

"He was ailing, had been ailing for near a week, and seemed like as if he was moping and going to die."

I was touched and saddened by this news.

"Poor dog! poor dog!"

Mrs. Brown heard me utter these exclamations; and for the first time since the dog's disappearance she ventured to mention the subject. Had I heard any thing of the dog? I told her what I had heard; and when I related how the dog was moping and ailing, she said "Poor dog!" too.

All that winter's night through I was disturbed by a noise in the house which I could not account for. I mentioned this to Mrs. Brown in the morning, and she said she also had heard a noise, and had fancied several times that it was like some one moaning in pain. It had been a cruel night, and the wind had drifted the snow in heaps into the corners and upon the ledges of the windows. Could any poor houseless wanderer have sought shelter about the place? I went and opened the front-door to look out. Gracious heavens! what is this? For some moments I was bereft of utterance; and at length I could only utter a cry. Mrs. Brown ran forward with alarm to see what ailed me. I could only point to the door-step. There, his head nestling close to the door, and his poor emaciated body covered by a pall of snow, lay Nobody's dog. Dead! dead! We stood for some moments contemplating the poor dead beast in silence. At length I saw a tear start into Mrs. Brown's eye; it trickled slowly down her cheek, and fell upon the dog's body. That was a gracious drop! Mrs. Brown has denied that tear, but I saw it; I saw it fall.

* * * * *

My house does not belong to me—I am only a tenant, and some day I may have to leave it. Should it fall into the occupancy of any one of those who read this history, let me beg respect for the rough white stone which marks a little green mound at the bottom of the garden. Its signification will be known from the inscription which it bears: "HERE LIES Nobody's Dog."

[Conclusion.]

OIL-PAINTING and water-colours are the Adam and Eve of modern art; you look to one for the highest strength, to the other for the highest refinement, in the forms of beauty. The Manchester galleries carry out the simile still further than this, and tempt one to say, that a difference in sex creates a natural difference in sphere, and that the present age is much inclined to forget this circumstance. A masculine woman is still but Psyche in plate-armour; and a bold fierce subject in modern water-colour—such, for example, as Corbould's "Scene from the *Prophète*"—is not much more effective in its way. The collection, however, notwithstanding this untoward leaning in several recent works of great merit and pretension, is wonderfully beautiful and brilliant. It presents a complete history of Water-colour Drawing. There are a few very early specimens of uncommon interest by Jordaens, Rembrandt, and others of the seventeenth century. In one of these, painted in 1698 by Henstenburg,—a steel-blue snake among green leaves, ants, butterflies, and lizards,—the colours are as bright as in Bartholomew's flower-pieces. Indeed, these fragile works appear, when properly cared for, to last as long as oil and canvas. It is not often that specimens of them any thing like a hundred and fifty years old can be seen, and the examples are the more interesting. There are a number of Sandby's drawings, and almost a hundred of Turner's, including his first-exhibited one and his last sketch. The general characteristics of modern art in water-colour and in oil are of course the same.

The magnificent collection of historical portraits occupies the side-walls of the great hall. Such men and women of any kind of renown as have left their portraits behind them are immortalised here, in a long line of strangely-mingled

"DID IT POUT WITH ITS BESSY?" BY E. NICOL, A.R.S.A.
[Royal Academy Exhibition, 1887.]

character, from Jane Shore to John Keats. This great brown painting of a colossal wooden doll with a crown on, represents King Richard II. It may be compared by the curious with the delicate miniature head of the same king in the picture mentioned before, where he kneels before a blue Madonna and blue angels, attended by John the Baptist, Edward the Confessor, and St. Edmund,—the martyr king of the East Angles, not Edmund Ironsides, as we called him by mistake. St. Edmund has an arrow in his hand.

Queen Elizabeth, her sleeves and her skirts, may warn modern ladies of what they are coming to; indeed, the freaks of fashion recorded on these walls are enough to hand us down to all eternity as a nation of either mad milliners or babies.

The waverers about English history may set a good many doubts at rest by comparing the many faces of Charles I., by the best artists of his day, with the single one of John Hampden, by an unknown hand. This portrait of Hampden is singularly interesting, as it is the only existing likeness. It was very well engraved in Lord Nugent's biography. Every one will look eagerly among the poets for the "Chandos Shakspeare," the only portrait of Shakspeare with any tolerable pretension to authenticity. A comparison of this portrait with the still more authentic bust, a copy of which stands below the organ, renews the feeling of chagrin generally produced by two distinct representations of the same individual; and makes one reflect with considerable melancholy on the impossibility of preserving a sure and perfect recollection of any face, albeit the noblest, which has once been given to the grave. The miniatures belonging to this collection deserve a separate study; they are exceedingly beautiful, and form a very interesting branch of English art.

There are about a hundred and fifty pieces of sculpture

in the great hall. This grand collection is not on the whole so effective as one could wish, partly from the want of a darker background, partly from the mixture of glass-cases with the marble figures. Separately, however, these works of the modern chisel are equal in excellence to any other of the productions of the age. Marshall's "Ophelia" is, we think, the best work in the gallery. Like the pictures of Ary Scheffer, its beauty is not in its strength, but in the tender and emotional poetry of the conception, which springs from something deeper than merely intellectual taste. We must not speak of Scheffer without referring to his "Faust" picture, in four divisions, which will be found in the clock-gallery. It is of course Margaret, not Faust; the feminine element, not the masculine, on which his genius exerts itself; but the story of the girl's soul, from the fresh sweetness of the first scene to the waste and ruin of the last, is exquisitely told. It seems rather strange, that while animal painting is carried to such perfection, there is no Landseer among our sculptors. The forms of the brute creation, in repose and in action, offer splendid subjects for the chisel.

Hard by these delicate and breathing marbles is the grim livery of the old servants of Death. The famous Meyrick armour from Goodrich Castle finds a fitting place in this gallery; for art has not refused to decorate those instruments of war which have so often brought ruin on her sanctuaries. Some of the suits of armour are magnificent; one especially, belonging formerly to Alphonso, Duke of Ferrara. We are not told which Alphonso; there were four or five; but if it were the first, the arms of Lucretia Borgia may have been wound about this splendid helmet, and the heart so guilty or so much maligned, which tradition has accused so deeply and Roscoe defended so courageously, may have throbbed against this hollow corselet. The workmanship, perhaps, indicates a later date; at least the first

years of the sixteenth century would be early for it. In one of the cases may be seen the breastplate of Maurice, Elector of Saxony, who obliged Charles V. to sign the convention of Passau: a significant piece of armour, for it is pierced like pasteboard by the bullet which killed its wearer in the year 1553.

The miscellaneous works of art are extremely numerous and curious. Besides the Oriental room, the tapestry, the photographs, the wonderful wood-carvings, and massive specimens of plate, a number of glass-cases contain choice examples of ivory, glass, china, and steel, from the British Museum and other places; and the collection of Monsieur Soulagès is distributed over various parts of the hall. This last collection, however, will be very imperfectly enjoyed by most visitors. For some strange reason, the Soulagès catalogue is printed separately, in a cumbersome and expensive form. Few people are disposed to pay half-a-crown for the privilege of carrying it about with them, and those who buy it have no great reason to be satisfied with their investment. The writer of this catalogue labours under a confusion of ideas; he confounds the British public with the *Encyclopædia Britannica*, and is filled with so reverential a sense of that public's vast and intimate knowledge of every thing relating to Majolica, Faïence, and the Quattro and Cinque-cento periods, that he can hardly offer the most recondite piece of out-of-the-way information without bowing "inexpressibly and apologising unconditionally for the impertinence. What ridiculous nonsense it is to write thus in explaining the meaning of a puzzling monogram! "The first character is probably intended for the Greek letter *phi*, but which has at the same time a double meaning, and may be read as the monogram O. F. In either case it is useless to observe, that the first letter of the name Fontana is indicated." Who wants his catalogue expanded by lines of "useless" observation? Why are the "British public" always to hear that an uncertain date is "circa" so and so, when the word "about" expresses the same thing in the same number of letters? And what is the use of telling Manchester artisans that M. de Laborde's *Notice des Ennaux*, &c. is a work so well known and appreciated as to render any plain account of Limoges enamel-work entirely needless? For our own part, we will venture to say, that—Edward the Black Prince, his wrath and the story of it notwithstanding—nine-tenths of those who look over M. Soulagès' curiosities will be much obliged to us for telling them that "Limoges" is a word of two syllables; that it is the name of a very old city in the south-west of France, and that first the goldsmith's art, then that of enamelling in colours on copper, and finally that of painting in enamel itself, were carried to perfection there. We will even venture to add, that "Amorini" are figures representing the passion of love; that Terra Cotta is baked clay, and that the Cinque-Cento period means the sixteenth century. There is real impertinence in offering information where you believe it to be unnecessary; but none at all in taking for granted what every body knows, that a knowledge of the details and nomenclature of art is confined to a small section of society.

The gallery of engravings is, we believe, one of the most elaborately completed portions of the whole exhibition; but we are sorry to say, that up to the moment at which we write no catalogue of them has been prepared. You may walk by and admire them, but of course description or proper comprehension are alike out of the question.

The least creditable part of the whole affair is the refreshment department. Enjoyment on an empty stomach is something very grim indeed. Those who stay many hours in the building must eat what they can get, and pay what they are charged. They can get nothing particularly good at the Manchester building, and they are charged extravagantly. Considering the vast number of customers, it is certain that the terms of a Cheapside restaurant ought to be sufficient. Instead of this, the supply is nothing like so good, and the prices are about double. Whether the

enormous profits of the refreshment-rooms go to the general fund or into the pocket of the contractor, the mistake is a very bad one, and is just the kind of mistake that a commercial city like Manchester ought to have known how to avoid.

We have only been able to glance at some of the leading features of this remarkable exhibition. The permanent catalogue will, we hope, be out before this is printed, and will doubtless be an excellent and trustworthy guide. Our last word on the subject shall be one of exhortation. Go, if you can, to Manchester, whoever you may be; approach the gathered treasures of so many ages in a spirit of reverence, or at least of modesty; remember that you stand among the products of the inner lives of men; that there is not one of the works before you which has not cost its maker more thought and time, more toil and patience, than you are going to bestow on the whole gallery; that the great of many lands and many centuries have done all they could in doing what you see around you, and that to learn what it is that has appeared lovely to these gifted souls must at least be to enrich your own.

POLYGLOT READINGS IN PROVERBS.

HE LOOKS AS IF BUTTER WOULD MELT IN HIS MOUTH.—Said of a very demure person, sometimes with this addition, "And yet cheese would not choke him." Of such a one the Spaniards say, "He looks as if he would not muddy the water,"—*Parere que no enturba el agua.* W. K. KELLY.

A STORY OF A HAUNTED HOUSE.

BY HOLME LEE, AUTHOR OF "GILBERT MASSENGER," ETC.
IN TWELVE CHAPTERS.

XII.—NEMESIS.

It had been a day of great preparation with Martha and Mrs. Parkes, for Adie had asked St. Barbe and Marsh the printseller, who stood godfathers for the child, to spend the evening in Nevil's Court; and the unusual festivity could not be signalised without much needless trouble. A dance had even been hinted at, but promptly negatived by Laurence, who said briefly that such a thing was not to be thought of,—and besides, they had no friends. This was one of his strange incomprehensible ideas, that they had no friends; whereas Adie's former schoolfellows had come often to see her and the baby, and would have gladly renewed their old acquaintance, if he had not been so cold and distant, that the most sociably-disposed were soon discouraged in their attempts to know them. Even St. Barbe rarely saw the inside of their door, and had never broken bread with them since the death of Nicholas Drow; the same with Curll also, though he had done Royston several kind offices since he had returned to live at Eversley. Martha did her share of work with a stolid unsympathising indifference; but Mrs. Parkes, who had undertaken to cook a supper worthy of the time,—for it was Christmas,—made noise and stir enough to have spoilt a dozen turkeys instead of roasting one. Then all her talk was redolent of sugar, and spice, and lemons, and strong waters; for the worthy woman's appreciation of the good things of this life was in the ratio of her scant enjoyment of them.

Adie made Laurence put on his wedding-suit; and she herself donned a delicate-tinted silk taffety, brocaded with bright flowers, which had been the Frenchman's bridal gift to her; matron-wise, she would cover her luxuriant black hair with a piece of cobweb-lace, which came to a peak on the forehead, and hung down in two broad lappets behind. The excitement and pleasure of the day had brought a deeper, softer lustre to her large eyes, and the vermeil flush on her cheek was as pure and fresh as in her maiden-prime. The

child, too, was decked in rich Indian muslin, all finely embroidered, with gay sash and shoulder-knots of blue, which contrasted well with the velvet-softness and purity of his little dimpled arms and shoulders. The women of the court had one and all been up to admire him, somewhat to the discomfiture of Laurence, who at length retreated into the closet, and left them to exhaust their superlatives of admiration unrestrained. They were all clustered upon the hearth, talking in chorus, the boy being in his mother's arms, surveying the whole proceedings with an air of princely satisfaction, when Martha entered from the corridor with a short comely dame in black, who joined the group, and added her meed of praise. Adie was holding the boy aloft when this person came in; but she instantly took him down, and let him hide his face against her neck, for it was not considered a good omen that the nurse who went from house to house to lay out corpses for burial should show herself at a christening. Mrs. Parkes made a loud exclamation, and said, that Judith ought to have known better, and Martha too.

"I did not know any one could object," said the nurse in a meek voice; "I don't believe much in fancies myself. The bonnie bairn will thrive none the worse for Judith's blessing, I'm sure."

Mrs. Parkes turned an indignant shoulder upon her, and, thus repudiated, the poor soul, whose vocation made her every where an unwelcome guest, drew back and spoke to Martha, who, with icy face and folded hands, stood looking on. Presently the two were observed to whisper together, while Judith glanced mysteriously at the rich lace on Adie's head. Mrs. Parkes insisted on her remarks being uttered aloud. "We are all women, and all friends; there is no secrets," said she, moved, perhaps, as much by past indignation as present curiosity. Judith hesitated, and Martha went out.

"What is it, nurse? tell us," asked Adie in her pleasant voice. "You are not amongst mourners to-day, and may therefore speak aloud."

"We were only saying that it was a pity you had chose that lace for your cap," answered the little woman, growing red and uneasy.

"And why, pray?" snapped Mrs. Parkes. "It is as beautiful a piece of old point as was ever seen in Nevil's Court, and is worth its weight in gold a score of times over. Why shouldn't it be worn if Adie likes? nothing could look so good or so well on her black hair."

"Maybe," responded the nurse; "it was only because I cut off a piece of it to cover Nicholas Drew's face when I streaked him for his coffin."

"Lord save us!" gasped Mrs. Parkes, dismayed at the result of her abrupt curiosity; for Adie's face faded to a deathly pallor, and she sank down into a chair. One of the women poured out a little of the wine which stood on the table, that they might drink the boy's health, and put it to her lips. She swallowed a few drops, and recovered herself quickly, smiling to cover her pain. This incident dispersed the gossips; they hastily emptied their glasses, and went out altogether, leaving only Mrs. Parkes.

"You must not heed any thing that silly old Judith says," observed the worthy woman, in a cheering tone; "she is brimful of cranky notions, each one more crazed than the other. Don't think of pulling off that pretty lace, for it becomes you beautiful."

"No; if an evil omen it is, the warning is given," answered Adie softly. "I shall be so glad to go away from this old haunted house; it is like a constant nightmare upon our spirits."

"Yet you have done a deal to make it lightsome," said Mrs. Parkes. "That nice picture over the fireplace, and Martha has polished up the panels till every one shines like a looking-glass. We shall be sorry to lose you; and I doubt whether any body else will care to come. You see, the house has got a bad name."

Adie made no reply; and Mrs. Parkes, having culinary anxieties on her mind, went out, purposing to ease her an-

noyance by lecturing the obnoxious Martha on her imprudence.

When she was gone, Adie sought Laurence in the closet, where he had chosen to shut himself up. He was leaning against the dingy window, looking out into the Bishop's garden, where the early twilight of December was fast replacing its frosty sunshine. At the sound of his wife's step, he turned; and as she came beside him he put his arm round her fondly.

"I suppose your little heart is satisfied now the gossips have flattered Laury," he said. "You could do very well without me."

She looked up wistfully in his face, not understanding him, yet not liking to question, for his manner of late had been strange in the extreme. He was tender by fits and starts; and he had asked her more than once before if she should grieve were he gone.

"Adie, you see that high wall at the further side of the garden," he abruptly remarked, after a minute's silence; "what is at the other side of it—streets or fields?"

"A steep bank first, and then a row of houses, called Bishop's Lane: you know it very well."

"Yes, I remember it;—and beyond the houses it is the river Ness and the open country? I know those fields; we have walked there."

"Often,—we passed St. Mark's Church. How cold it is here, Laurence; baby shivers: let us go to the fireside." She drew him out of the gloomy little den into the broad light of the outer room, and made him sit down on the long settle beside her.

"Now, Laurence, admire our handiwork," she began, with an effort of sprightliness. "I don't believe you would ever see any thing if I did not order you. There is my picture over the fire, all framed about with holly and scarlet berries. Look, too, how Martha has polished the panels of the press, and even of the wainscot. We wear quite a festive air."

"Yes,"—he glanced round slightly, seeing in those bright dark panels so many repetitions of his phantom-pictures,—“yes, Adie, you would make sunshine every where but in a diseased mind. I wonder often why certain circumstances are permitted,—why, for instance, you, sweetheart, as fresh, innocent, and guileless as our child in your arms, should have been suffered to link your fate with mine,—why you should have loved me."

"I can answer your last speculation—why I should have loved you,—because I could not help it," answered Adie with a pouting smile. "It was sorely against my will, as you very well know."

"I have tried to make you happy,—you *have* been happy, Adie."

"To my heart's desire, Laurence. I only want to see you wear your old careless way, and to hear you talk to me as you used to do, and my measure of joy would be full; but perhaps it would be too much at once."

"Every night, Adie, I see you on your knees,—do you ever pray for me?"

"I try always; but it seems as if,—shall I say it, Laurence?"

"Yes, my darling, speak on."

"Well, it seems as if I were put away out of God's hearing when I pray for you. It is not that my words are cold, or that my heart is not in them, but as if mercy had covered its face. I have wept sometimes, Laurence, I was so sad for you."

"Don't waste your tears, Adie; there ought to be cleansing power in them; but if your prayers are to a deaf ear, they will be useless. I wish, for your sake and the lad's, I were a better man."

"Laurence, you know what is promised to those who sincerely repent."

"But I do *not* repent. I only curse my evil fate. Do you remember likening me to a figure in a certain picture?"

"O, yes; how wrong it was of me! I was quite ashamed that you should know. I hoped you had forgotten it."

"No, sweetheart, I have never forgotten one word of yours; and the similitude there was striking."

"It was a foolish thought of mine; I have never seen the resemblance since; so it must have been a mere passing expression."

"Your loving fancy has idealised me out of all nature, Adie; you do not see my faults, or else you are fond of them for their owner's sake."

"Do not be so sure, Laurence; you want mending in many ways, and I think of setting seriously to work to mend you."

"That task will need a more cunning hand than this, sweetheart," said he, taking her slender fingers in his; "I think if the jarred, flawed, leaking vessel were all broken up, it would be best; it is not safe to stow your happiness away in it."

"Laurence, you make me very sad when you talk in that fashion; I do not understand you. You know that if I were without you, I and baby might as well be lying in St. Mark's churchyard by poor old Grizzie; we should not care to live by ourselves."

"I do believe you love me with all my sins on my head."

"Doubt any thing but my love, Laurence; for I can forgive you every thing but such a doubt."

They staid there by the fireside for a long time, talking of things to them important, but to others trivial, until Martha came in to put more logs on the fire, to close the shutters, and light the lamp. Her master was gayer than usual; Adie's voice had charmed him to a better mood; and the woman, in her furtive watchful way, took note of it. They became silent when she entered; and as her listless step seemed always to deepen instead of breaking the hush, the noise of a rising wind outside resounded mournfully through the Court. It drove sharp rattling gusts of hail and sleet noisily against the windows; then lulled and rose again to fury. Martha said it was going to blow a hurricane, as she fastened the windows. "Let it blow; we are under warm shelter," responded Laurence carelessly.

"Ay, master; and them who have to bide it out of doors may bide it easily enough, if they have clean consciences," said Martha significantly.

He turned round to the fire, with a dark wrathful look on his face. Adie, who was singing to the child, had not heard this brief colloquy. At that moment voices below were heard, steps ascended the stairway, and Marsh and St. Barbe appeared at the door.

It was a rather oddly assorted company which sat round that Christmas supper-table. Laurence Royston and Adie, the courteous, coldly-polished old Frenchman, and the rough Curll; and finally, the round, rubicund, and honest Mrs. Parkes. Martha glided about with a cat-like velvety step, serving them; always at hand, but never obtrusive—a model of a waiting-woman with a face as blank as a shadow. The cold being carefully shut out, the old room looked and felt cosy enough; and when Curll had thawed into good humour, he ceased to remember his chilly walk out of the Barbican. The Frenchman also seemed in a state of ineffable beatitude, as indeed he always was, with good cheer before him. These two and Mrs. Parkes had the talk for some time to themselves; for Laurence was very silent, and Adie was disturbed to see him so depressed. By and by, however, he shook off the fit, and laughed with the rest, which his wife seeing, she also became at ease. Mrs. Parkes had the satisfaction of seeing her culinary labours duly appreciated and duly honoured; so that, when the Christmas bowl was set on the table, with all the accessories for the compounding of a drink which St. Barbe called *pomche divin*, it needed but that to raise her spirits to their utmost height. At any other time, she might have been considered as too exuberantly gay. Curll was to compound the bowl; and that being done, the health of young Laury was drunk,—by St. Barbe sentimentally, by the printseller enjoyingly, and by Mrs. Parkes tearfully. Perhaps Adie put up a brief

prayer as her lips touched the glass; and Laurence, without tasting, and almost unconsciously, set his down again.

"You do not drink, my friend Laurence," remarked the Frenchman gaily. "You must drink to your son—you must."

With a nervous hand Royston lifted his glass, and drained it; when he set it down again it rang on the table with the tremor of his grasp; but soon his cold, pale, blue eyes lit up, and a red spot of excitement burnt on each hollow cheek. It now became evident that Curll meditated making a speech; for he became restless and flurried, half-rose from his seat, ruffled his scanty gray hair, and with a hem, began. He hoped there were none present who had forgotten the former master of that house; he had not: he missed him daily. They were friends; they had been boys and men together, and friends always. He had loved Nicholas Drew for his virtues, and revered him for his genius; nobody had known him better, or appreciated him more highly. They anticipated what he had to say: this good old man lay in his grave unavenged. The toast he had to propose was, "A speedy capture and short shrift to his murderer."

During this exordium, Martha had been standing opposite her master, with her eyes looking at him from beneath the half-downcast lids, and in her hand a glass which he had handed to her to drink his son's health. As it was finished she lifted it to her lips and drained it, still watching him. Adie hesitated a moment, then swallowed a few drops, while her husband drank the contents of his glass hastily, and cried, with a sort of defiance in his tone, "To that I say, Amen." A few seconds of silence ensued, during which Martha glided to and fro, putting a few matters within reach previously to leaving the room.

"Let us have a game at cards," suggested Laurence hastily. "You like cards, St. Barbe? all Frenchmen have a taint of the gambler." The clockmaker agreed; and Marsh said that it was years since he had touched any thing of the kind, but he would join in. Adie did not like this; but there was an eager restless excitement in her husband's manner that she did not care to thwart. He asked her to find some cards. She replied at first that there were none in the house; then suddenly recollected that there was a very old pack, which had belonged to Nicholas, in her box, where she stored her treasures. Martha had not yet gone out, and she bade her fetch the little chest from her chamber.

"The cards, mistress,—must I get them out?" asked she quietly.

"No; you can bring the box here," was the reply.

The woman returned in a minute, saying it was too heavy to lift; but if Adie would give her the key, she could find what was wanted. With an ejaculation of impatience, Laurence started up, and fetched the box himself. It was of trifling size; and Mrs. Parkes suggested that Martha was good for nothing, if that were too much for her. The cards were produced, and the three men were soon earnestly engaged in their game. Adie and Mrs. Parkes sat on the long settle by the fire, talking, while the former carelessly turned over the contents of the box. Her fingers came in contact with the dead white rose, which she lifted out and smiled over thoughtfully.

Martha came up to her. "Shall I put the box away, mistress?" she asked, preparing to lift it up.

"No; leave it," said Adie; and taking another thing from it, she tripped behind Laurence Royston's chair, and laying one hand softly on his shoulder, dropped the other before him, asking in a whisper, "Do you know that glove, Laurence?"

He recognised it instantaneously, and started up from his chair with a terrible oath; his face was livid, his eye murderous. "I never saw it in my life before! Why do you come to me with such fool's questions?" he exclaimed. Then reading the startled surprise in the faces all around him, he added, "What is the glove to me? what should I know about it? take it away, Adie!"

He flung it over towards the fire, but it fell short upon the hearth, and was picked up by Mrs. Parkes, who examined it carefully. From the first moment of his outbreak, Adie never took her eyes from her husband's face; they dilated first with a pained astonishment, then darkened with a wavering mist,—a dull speechless agony. She had penetrated the mask which he strove vainly to retain upon his traitor countenance. Marsh laid on his host's shoulder a heavy grasp, and St. Barbe, passing round to the further side of him, whispered low in his ear a few emphatic words. Royston's eyes flickered from one to the other, and then settled on Adie. "You have killed me with your silly love!" said he in a kind of mad rage; thus blindly changing the suspicion which had flashed across the minds of the two men into a dark certainty that he was Nicholas Drew's murderer.

They were the last words that for many months struck the soul of the poor Flower of Nevil's Court. A shrill passionate cry broke from her, which echoed and re-echoed through the haunted house; then she seemed to stiffen into a statue; all expression passed from her features, all speculation from her eyes; her hands fell as if volition were utterly gone from her, and without one word or one gesture, without even turning her head to follow their movements, she let the Christmas-guests depart, taking her husband with them. As he went out, Laurence looked back at her with a wild remorseful pity. Had he not done her wrong enough that his last words to her should be that cruel, cruel reproach?

Once out in the court, self-preservation, man's strongest instinct in most cases, prompted Laurence Royston to make one desperate effort to escape. The two men who had been his guests had loosed their grasp to let him pass down the outer stairs; and rushing to the archway, he, favoured by the darkness, contrived to elude their pursuit, and to disappear in one of the numerous narrow lanes abutting on Friargate. Thence to the open country, under cover of night, he made his way; and though a hue and cry was raised after him, he was supposed to have effected his escape from the kingdom, as he was never traced.

Poor Adie remained long in her unconscious state, blank and unimpressible as a bronze image. Martha watched and tended her and the boy with unremitting care and fondness, striving by many a little art to awaken her senses. She liked to sit in the open air, especially when the sun shone, gazing pitifully at heaven, and pulling to pieces flowers that people brought her from the fields; but she never took any notice either of her boy or Martha, or of any other person whom Christian charity impelled to visit her. She was regarded as one on whom God's chastening hand had been laid with signal heaviness; but still as one who suffered for another's sin.

When the dark days began to come round again, in the long stormy October and clouded November nights, there might occasionally be seen the figure of a man slinking along from shadow to shadow under the Minster walls, until he came into Nevil's Court. If all was still, he would hide in the archway, and listen for any one coming or going to and fro in the house; and sometimes he gathered courage stealthily to mount the old wooden stair, and peep in through the uncurtained window at poor Adie, sitting like a dark statue by the fire, Laury playing on the hearth, and Martha busy at the work with which she helped to maintain them. After a few minutes of this stealthy watch, he would glide away as noiselessly as he had come; and not seldom he would lie crouching like a miserable homeless dog in a corner of the court until the window was dark, and all the city was a-bed. His appearance grew more and more haggard and awful; and at last his strength was so spent, that any one meeting him might have thought it was Laurence Royston's ghost, but not that unhappy man in the flesh. One keen, stinging night he had trailed his steps to the archway, and there he fell, utterly spent with hunger, fatigue, and misery.

After lying for a few minutes thus, he staggered to his feet, to make an effort to see Adie once more, and climbed the stair clinging to the rail. Adie only was there; neither the child nor Martha; so he opened the door and went in, crying, "Adie, I am dying; let me die here!" and staggering across the floor, he fell at her feet, clinging feebly to her knees. At the sound of his voice she started up, looked at him eagerly, and sinking beside him, she drew his head upon her breast, saying with a pitiful yearning love, "Here, Laurence, here!" Martha came in, and regarded the scene with amazement. Adie bid her shut to the door.

"Say a prayer, Adie; God will hear you," gasped the dying man; and before the words were done he had gone to his account.

This event, startling and painful as it was, restored Adie to her right mind. At first she was questioning continually, "Is he forgiven? Did God hear my prayer?" But at length she was still, and left her cause in His faithful hands. She lived long, patient, gentle, full of good and charitable offices. The poor knew her; those who were sick and in misery knew her, and blessed her name; in the old long ago she would have been canonised as a saint; if ever suffering purified humanity to saintly holiness, Adie was thus purified. Laury lived to return her love, and to be a man of mark in his day and generation; but he and the Flower of Nevil's Court, and all the other personages named in this story, have been churchyard dust these many, many years; though the tale still goes, that in the dead of the Christmas night a wild piercing cry frightens out of the silence a host of mournful wailing echoes, and that the tramp of the footsteps in the corridor is to be heard whenever calamity is coming to any of those who dwell in the Haunted House.

AN OFFICE THAT KNOWS HOW TO DO IT.

We have had the romance of "the road, the river, and the rail," why not the romance of the Post-Office, with its threatening letters to unfortunate debtors, its missives of hope or despair to daring speculators, its cheering tidings to struggling tradesmen, that "business is becoming brisk;" its gladdening messages from the absent wife or husband; its holiday letters from the joyous schoolboy, with a postscript, "Be sure, and take care of the rabbits;" its dainty-looking confidential epistles from young lady friends, and last, not least, its fervent billet-doux from cruelly parted lovers, whose "words that burn" make one sometimes fear her Majesty's mail-bags may be fired by their inflammable contents?

There is ample food for romance here. Who cannot picture the various forms and faces as they bent above each sheet of paper? Who cannot see the radiant joy light up that fair girl's face, as she reads each message from her absent lover; or who can fail to trace the look of happiness that beams once more upon the pale countenance of the widow at the sight of her only child's well known writing? And there is enough of sorrowful romance, too, when the lawyer's epistle darkens some hitherto happy home, with the dread tidings, that ere long they must leave its sheltering roof, and the agonised father looks in speechless anguish on his patient wife, and helpless daughters, who, reared in luxury, must now feel with double bitterness the sting of poverty; or when the short formal letter—how different from what they once were!—crushes every hope within some woman's too trusting heart, and wrings from her the bitter cry, "Alone, alone!"

The wondrous facilities given by the Post-Office for the interchange of thought and opinion, the business transacted by its aid at opposite corners of the land, the messages of love, the outbursts of indignation, the walls of sorrow, which lie shrouded in those million envelopes, outstrip the fairy tales of childhood in interest.

The speed and excellence, too, with which all this is

done proves beyond a doubt that here at least we have an office that knows how to do it. As we shall see, it took time to find out this great official mystery.

Not until the Wars of the Roses were there any regular postmen; about that time common carriers began to travel with the mail. Our postmen are still called "letter-carriers;" and the words "post" and "carrier" are used by Shakspeare as synonymous. Edward IV., when at war with Scotland in 1481, is said to have established a system of relays of horses, by which despatches were conveyed at the rate of 200 miles in three days. The number of miles now daily travelled by railways, coaches, mail-carts, &c., in the service of the Post-Office, is upwards of 61,000.

Little more than a hundred years ago, the mails were conveyed by post-boys; and a surveyor of the time gives the following account of their doings at Salisbury.

"At this place, found the post-boys to have carried on vile practices, in taking the bye-letters, delivering them in this city, and take back the answers, and specially the Andover riders. Between the 14th and 15th inst. found on Richard Kent, one of the Andover riders, five bye-letters, all for this city. Upon examination of the fellow, he confessed that he had made it a practice, and persisted to continue it, saying that he had no wages from his master. I took the fellow before the magistrate, proved the facts; and as the fellow could not get bail, was committed; but pleading to have no friends nor money, desired a punishment to be whipped, and accordingly he was to the purpose. Wrote the case to Andover, and ordered that the fellow should be discharged, but no regard was had thereto; but the next day the same rider came post, run about the city, and was insolent. The second time the said Richard Kent came post with two gentlemen, made it his business to take up letters, the fellow instead of returning to Andover, gets two idle fellows, and rides away with three horses, which was a return for his master's not obeying orders, as he ought not to have been suffered to ride after the said facts were proved against him."

The same surveyor complains bitterly that the gentry "doe give much money to the riders, whereby they be very subject to get in liquor, which stopes the mails."

It did not take much to "stop the mails;" for we are told that when Mr. Harley (Lord Oxford) complained that an express to him had been delayed, the postmaster-general replied, that "it had travelled 136 miles in thirty-six hours, which is the usual rate of 'expresses.'" In these railway-days, one laughs at the then rate of "expresses;" and we, "the nation of shopkeepers," see and feel that there is a grander poetry and a deeper romance in our passion for progress and work than the sickly sentimentality of many will admit.

An amusing account of the early postmasters-general is given by Mr. Scudamore in a letter to Mr. F. Hill, contained in the report on the Post-Office for 1855. Between the years 1690 and 1720 Sir Robert Cotton and Sir Thomas Frankland were jointly the postmasters-general; and of them Mr. Scudamore says:

"They were evidently very active, energetic, and shrewd men. All letters and mandates bore the signatures of both the postmasters; but it seems probable that Sir Robert Cotton attended chiefly to the inland business, whilst Sir Thomas Frankland managed the packets; for in the Agents' Letter-Book there are frequent notices to this effect: 'Your business cannot be settled until Sir Thomas Frankland, who hath a fitte of the gout, shall be somewhat recovered.' This afflicted postmaster-general was a Yorkshire baronet of good estate, but Sir Robert Cotton was only a knight, and for all I can learn of no great estate, which will perhaps account for his immunity from gout.

The packets in those days, when war raged for so many years, and when every sea was covered with French privateers, gave the postmasters-general very great and constant anxiety. Their orders to the captains of such vessels are urgent, that they shall run while they can, fight when they can no longer run, and throw the mails overboard when fighting will no longer avail. Then comes a piteous petition from James Vickers, captain of the *Grace Dogger*, who, as he lay in Dublin Bay waiting for the tide to take him over the Bar, was seized by a French privateer, the captain of which stripped the *Grace Dogger* of her rigging, sails, spars, and yards, and of all the furniture 'wherewith she had been provided for the due accommodation of passengers, leaving not so much as a spoon or a nail-hooke to hang any

thing on,' and finally ransomed her to the aforesaid James Vickers for fifty guineas, which sum, with the cost of the other losses, our postmasters-general had to pay. . . . The postmasters-general were evidently continually troubled during the war by special consignments to them of goods and parcels, and even human beings, for whose safe transportation to their destination they were to be held responsible. So various were the articles intrusted to them, that I will jot down a list culled from a very few pages of the Agents' Letter-Book.

'Imprimis,—Fifteen couple of hounds going to the King of the Romans, with a free pass.'

'Item,—Two servant-maids going as laundresses to my Lord Ambassador Methuen.'

'Item,—Three suits of cloaths for some nobleman's lady at the Court of Portugal.'

'Item,—A box containing three pounds of tea sent as a present by my Lady Arlington to the Queen-Dowager of England at Lisbon.'

'Item,—A case of knives and forks for Mr. Stopney, her Majesty's Envoy to the King of Holland.'

'Item,—A box of medicines for my Lord Galway in Portugal.'

'Item,—A deal case with four fitches of bacon for Mr. Pennington of Rotterdam.'

Really, with all these cares upon them, and what with scolding an agent once because 'he had not provided a sufficiency of pork and beef for the prince;' again, because 'he had bought powder at Falmouth that would have been so much cheaper in London;' again, because 'he had stirred up a mutiny between a captain and his men, which was unhandsome conduct in him;' again, because 'he has not ordered the *Dolphin* to sail, though the wind is marked westerly in the Wind Journals,' whereas the postmasters-general 'admire,' what with bringing Captain Clies to trial, 'for that he had spoken words reflecting on the royal family, which the postmasters-general took particular unkind of him,' and reprimanding another 'for breaking open the portmanteau of Monsieur Raoul (a gentleman passenger), and spoiling him of a parcel of snuff;' what with purchasing new vessels, stores, and provisions, and 'ordering the old ones to be sold by *inch of candle*;'—with all these cares, one sees that our postmasters-general had enough to do. Their letters are sometimes plaintive enough. 'We are concerned,' say they, 'to find the letters brought by your boat (from the West Indies) to be so consumed by the rats, that we cannot find out to whom they belong.'

In 1635, Charles I. issued a proclamation to this effect: "Wherefore he doth now command his postmaster of England for foreign parts to settle a running-post or two, to run night and day between Edinburgh and London; to go thither and come back again in six days; and to take with them all such letters as shall be directed to any post-town in or near the road." Six days from Edinburgh to London!! The mails between these two places are now conveyed in fifteen hours.

From about 1640 the Post-Office has been one of the settled institutions of the country; and in 1683 a penny-post was established by Robert Murray, an upholsterer, for London and its districts, and was by him carried on successfully for some years. This was the forerunner of Mr. Hill's plan of penny-postage; and of the complete success of the latter, some idea may be formed from the fact, that in the first year of its adoption the increase of letters was nearly *ninety-three millions*. In 1840, the year in which the penny-postage was established, the number of post-offices in the United Kingdom was 4028, the present number is 10,866; and the total number of officers and servants of the department is now 23,130. These facts prove the great blessing of our penny-post.

One cannot picture the disastrous consequences which would attend the loss of our postal arrangements; the panic in the warehouse and shop, the sorrow in the household if deprived of the visits of that most important personage, the postman. A very speculative character is the postman of your country towns and villages; and many a secret is intrusted to his keeping. Half-crowns at Christmas find their way to his pocket from shy maidens, whose stern guardians have forbidden the reception of the amorous epistles of some village Romeo, which said epistles the good-natured postman finds divers opportunities of delivering, unseen by older eyes, into the fair hands of the maiden herself. He studies the countenance of the tradesman as he gives him a letter

that has a marvellously lawyer-like look about it, and draws his own shrewd inferences therefrom. He watches the mother's face as she receives the neat-looking envelope, which he guesses "comes from Miss Helen as was married a bit ago;" and his rough tones grow gentle when the widow looks inquiringly at him, as he repeats the words that are so mournful to her now, "Nothing for you to-day, ma'am." He teases the little dressmaker, and asks if she works for gentlemen, as he supposes these letters are all upon business, and slyly wonders how long it takes to make a wedding-dress.

Much facility to the post-office and benefit to the public would be given by a little more care on the part of the public themselves. If letters were posted as early as possible, instead of being left until the latest moment at which they can be received, much hurry and confusion would be saved the Post-Office officials, and the letters would have a better chance of being correctly sorted and despatched. Misdirections, too, are generally the result of haste; and in many instances the servants of the Post-Office are blamed for carelessness and inattention when the fault is really attributable to other quarters. Recently a gentleman coolly informed the postmaster of a provincial town, that his was the worst conducted office within many miles of the place, because a letter which he had posted at the office in question had not reached its destination. In a week after the complaint had been made the gentleman had his letter returned to him from the Dead-Letter Office, he having addressed it High Street, London, instead of High Street, Birmingham, it being intended for the latter place. Badly sealed, and often totally unsealed letters, cause great annoyance both to officials and receivers of them. It will scarcely be credited perhaps, yet is nevertheless a fact, that letters, containing remittances to large amounts are frequently found unsealed. With the facilities given by the system of registration, one can scarcely refrain from the Yorkshire verdict, "Served them right," when such extreme carelessness leads to loss.

Of more unimportant letters, great are the numbers found open, from the servant-girl, who seals with cobbler's wax and her thimble for a crest, to Miss Anna Maria, who writes to her bosom-friend Matilda for advice touching a certain young gentleman, who has lately treated the said Anna Maria with heartbreaking coolness, entreating her dearest Matilda to counsel what is to be done in this dreadful emergency; and Anna Maria, in the depth of her despair, forgets to seal her letter.

Mr. Helps, in his finely thoughtful work, *Companions of my Solitude*, speaks of the opportunities of post-office officials of doing, in the spirit of their heavenly Master, little kindnesses to the stranger and the helpless; and as a class (with no doubt many individual exceptions) I believe few are more patient and kind in answering the thousand-and-one questions they are daily tormented with.

The writer knew a touching instance of "hope deferred" for long years, and at last realised. An old woman, whose youngest son was a soldier serving in India, called weekly at the post-office in the town where she resided for six years, her unvarying question being, "Please, have you had any letters from the Indies lately?" Month after month, and even year after year, went by, and no letter from her soldier laddie gladdened the mother's heart; but bravely she hoped on, and at last the long-looked for letter arrived. Most touching was the widow's joy, and a proud woman was she the day she posted her answer to the distant "Indies."

Among the recent improvements in this institution are the pillar letter-boxes, which are great conveniences to the stranger and the traveller, and are also the general dépôt for bits of orange-peel, nut-shells, ends of tobacco-pipes, &c., of all the mischievous boys of the neighbourhood. The alteration of the book-postage, too, is a great boon alike to authors and readers; and the division of London into ten postal districts greatly facilitates the delivery of letters in the metropolis and its environs.

Gigantic in extent, and admirable in detail, the postal arrangements of England lose nothing by comparison with those of other countries; for this, like her other vast institutions, is carried out with that energy and perseverance which has obtained for her the proud pre-eminence she has so long enjoyed.

VENTILATION: ITS VITAL IMPORTANCE AND EFFICIENT APPLICATION.

[First Paper.]

INTRODUCTORY.

DURING the last forty or fifty years, many important inventions and discoveries have been made that contribute much, not only to our commercial prosperity, but to our domestic comfort and convenience. Science has assiduously lent its aid to gratify our slightest wishes, as well as to execute our most extravagant demands. That our patience, for instance, may no longer be exercised in plying the flint and steel in order to ignite the tinder and produce a flame, ingenious machinery, conjoined with chemical agency, has been employed to afford an instantaneous light; and the trade of match-making, formerly practised only by the mendicant, has passed into the hands of the capitalist; the manufacture of one packet of these apparently trifling but really indispensable articles being, moreover, the production of no fewer than thirty different individuals. The electric telegraph and the railway-train have all but fulfilled the modest request of the lovers as to the annihilation of time and space; and the sun himself, in his capacity of artist, is ready on the shortest notice to complete their happiness by enabling them to exchange portraits. Many objects have been accomplished that seemed as unattainable as the philosopher's stone or the perpetual motion; while the inventors, during their progress, have been treated as visionaries, and assailed unsparingly by the shafts of ridicule. Several of these contrivances have arrived at their present state of efficiency only after repeated trials; a frequent cause of failure being, the attempt to do too much, and to dispense with the assistance afforded by the operation of natural causes. The awkward devices at first adopted to propel locomotive engines are a striking instance of this distrust in the co-operation of the physical laws; and the discovery that the weight of the engine produced sufficient friction on the rails to secure progressive motion—thereby obviating the necessity of the rack-wheels and other clumsy expedients resorted to—equally gratified and astonished the projectors. To the same cause may also be attributed the general want of success in the many efforts made to solve the important problem of ventilation; it being only within these few years past that the desideratum has been supplied in the discovery of a method remarkable alike for its efficiency and its simplicity, and of almost universal application, and for which we are indebted to Mr. Charles Watson, of Halifax, Yorkshire.

With respect to ventilation, however, neither the object itself nor the labours to attain it have been fully appreciated. Few have a clear conception of the pernicious influence of a tainted atmosphere. The poorer classes, indeed, have a decided aversion to the admission of fresh air to their dwellings; while many of those who move in a higher sphere look upon the discomforts attending their crowded assemblies as necessary evils, for which it has seldom occurred to them that any remedy might be applied. "So complete and all-pervading has been the ignorance of

physiology, even among the the best educated classes," says Dr. Andrew Combe, "that, in Edinburgh and almost every large town, we have instances of large public rooms, capable of holding from 800 to 1000 persons, built within these few years, without any means of adequate ventilation being provided, and apparently without the subject ever having cost the architect a thought. I have seen churches," continues he, "frequented by upwards of a thousand people, in which, during winter, not only no means of ventilation are employed during Divine service, but even during the interval between the forenoon and afternoon services the windows are kept as carefully closed as if deadly contagion lay outside, watching for an opportunity to enter by the first open chink; and where, consequently, the congregation must inhale, for two or three hours in the afternoon, an exceedingly corrupted air, and suffer the penalty in headaches, colds, and bilious and nervous attacks."

PAMPAS GRASS.

ORNAMENTAL grasses might be much more extensively used in the decoration of rockeries, fern-banks, and the fronts of shrubberies, than they are. The grasses are, in fact, a neglected race, now about to be rescued from their long oblivion by the skilful hand of Mr. Lowe, who is writing their history; and the efforts of cultivators, who are bringing some superb kinds into cultivation. Any one who may be strolling into Bishopsgate Street may see, at the warehouse of Mr. Clarke, opposite the Flower-Pot, a collection of the most renowned British grasses, beautifully prepared and named for inspection. Let any lover of the beautiful look over such a collection, and then say whether grasses ought not to be as assiduously cultivated for ornament as any plants that have showy colours.

At some future time we may find space for some remarks on the selection of grasses for ornament; we purpose now only to describe the properties of one of the family, which may justly claim to be considered the most noble of the tribe.

The Pampas Grass (*Gynerium argenteum*) is a perennial, a native of the Andes, where, in the Cordilleras, it is found at a height of 12,000 and 14,000 feet above the level of the sea. It is not surprising, therefore, that it should prove so nearly hardy as to bear the winter in the latitude of London, though a very severe winter would injure its beauty for a time. It has but recently been introduced to this country, and its introduction is entirely due to Mr. David Moore, the indefatigable superintendent of the Glasnevin Botanic

PAMPAS GRASS.

Gardens, Dublin. He received seeds of it in 1848 from Mr. Tweedie, who describes it as "the most showy plant of any class in this country (Brazil) when in blossom, appearing like white sheets hung on poles, and is seen at the distance of many miles."

In stature this grass rivals the bamboo, and is eminently fitted for garden decoration on account of its majestic and superb outlines. The leaves are hard, wiry, very rough at the edges, scarcely half-an-inch broad at the widest part, of a dull gray-green, and edged all along by sharp teeth. The flowers appear in October and November; they are in panicles of from two to two and a half feet long, of a silvery whiteness, and densely covered with long colourless hairs. When grown in the Society's garden, it attained to the following dimensions:

Height from ground to curve of leaves, 7 feet.

Height to summit of the plume of flowers, 11 feet.

Diameter of the tussock, 9 feet.

Length of one of the leaves, 8 feet.

Length of flower-plumes, 2 feet.

Number of flower-plumes, 17.

Such is the magnitude of this queen of the grass-family. Its elegance is more noteworthy than its size; every one of its long thong-like leaves curling gracefully from the centre to the circumference, forming a thin but huge tuft that defies the pencil of the artist to do justice to it. Add to this the glittering whiteness of its panicles, which dart into

the air on slender stems far above the pendant tuft of foliage, and shake their thousands of bright scales in the sunshine, like the work of some ogre silver-smith. As an ornament to a well-composed scene of rock and shrub, nothing can equal it; but it wants room, and must be supported by fine masses of shrub, or half its beauty would be wasted.

The cultivation is not difficult. The seeds should be sown in March, in well-drained pots, filled with peat and loam, and then plunged into a gentle hotbed. As soon as the plants are up, give them greenhouse treatment, and pot them off singly as soon as they are large enough. Grow them on till the middle of May, never letting them flag for want of moisture,—they must, indeed, have plenty,—and turn them out into the open ground, in a compost of loam, leaf, mould, and a little old dung. The compost should be rather stiff. Mr. Tweedie says, that in Brazil it arrives at greatest perfection in a cool clay-soil. Strictly speaking, it is a river-side sedge; hence it must have abundance of water all through the summer. Those who wish to save the trouble of raising seedlings, can have strong plants ready for putting out.

SHIRLEY HIBBERD.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XIV.

PAINTED BY M. S. CHIDDLE.

THE SISTERS' SCHOOL.

THE SISTERS' SCHOOL.

FROM CRABBE'S "TALES OF THE HALL."

"With hair uncomb'd, grimed face, and piteous look,
Each heavy student takes the odious book;
And on the lady casts a glance of fear,
Who draws the garment close as he comes near;
She then for Lucy's mild forbearance tries,
And from her pupils turns her brilliant eyes,
Making new efforts, and with some success,
To pay attention while the students guess,
Who to the gentler mistress fain would glide,
And dread their station at the lady's side."

In one of Crabbe's downright homely tales the plot runs thus: Two sisters of contrasted characters,—the one, Lucy, brilliant, and the other, Jane, mild,—lose a little fortune by some swindling British Bank of the author's day; and with the cash lose each a lover. The one, Jane, dismisses the man herself, whose calculating prudence and vanity, and half-condescension, wound her earnest nature to the quick; while the other, the showy sister, has the additional pang to find her betrothed take a like advantage of her poverty, being, in a word, a rascal, and who is discharged with but little ceremony. Both dismissed and the fortune gone, the forlorn ladies set up a school in their native village, to the conduct of which the severe practical nature of Jane devotes itself, while Lucy's feebler heart runs over with disgust at the coarse task set before her; hence the passage quoted, and the picture. Jane sits behind examining her clownish pupils, and with a faint look of affectionate reproof regards Lucy; she, lost in abstraction, pays little heed to the inattentive and dirty boy, who, taking advantage of this, obtains a refresher for his memory from the girl in front. Lucy's action, as she gathers her gown from contact with the young clown, is characteristic and full of studied grace; her robes, poor as they are, fall round her in sweeping masses; the pattern is large, showy, and full; her braced and bare arm and unshrouded bosom, with the heavy pendants in her ears; in short, all of her—her hair, her pose, her dress—tell of the vain and foolish woman, too absorbed to attend to her duties, but well alive to all her person required for decoration.

The close-drawn kerchief and white cap, with the demure and puritanic air of Jane, tell the tale of the opposed character, bending itself to its labour, and cheerfully undergoing all for duty. Notice how well the artist has given the easy firm grace of her attitude, and the clear good expression to the features of this girl.

The whole picture contains much excellent design, which is so well considered, that the tale almost tells itself. Within the picture are other incidents so obvious as to need no pointing out from us. As a piece of scientific composition, this work has seldom been equalled by a lady, and does Mrs. Criddle high honour for her achievement in so recondite a branch of art.

L. L.

THE SIEGE OF JEZEERAH: AN ADVENTURE IN KURDISH MESOPOTAMIA.

It was in November '54. After the summer's campaign of the Turkish army before Kars had ended in the Russian triumph at Kuruckdereh, I had journeyed away into Persia, with the purpose of smuggling myself into Daghestan—the country of Schamyl—along the south-western shore of the Caspian. Failing in this, I had passed westward through the mountain-wilds of Kurdistan Proper into Assyria; and, after a halt of several weeks at Mosul, was continuing my travel to the coast of Syria, to take shipping at Latakia, or Scanderoon, for Stamboul. At Mosul I discharged the servant who had accompanied me from Tabreez: he had broken down oftener than was convenient with fever and ague; and as my own familiarity with Turkish was now passable, I paid his caravan-hire back to his home, and bargained with the government Tatar (or postal courier) from Baghdad,

to pilot me on to Aleppo. I had already made trial of all the other modes of Asiatic travel,—by my own private animals, by post-horses, and by those of a caravan,—and now braced up my muscles for a spell by this, the quickest but most fatiguing of all. I need hardly say, that horseback is the only vehicle known to the traveller east of the Bosphorus, and that his choice lies between the four varieties mentioned. By the first, he can travel at what rate he likes; by the second, his progress is usually a couple or three stages of about five hours (fifteen miles) each, daily; by the third, he jogs on in slow company with the long train of laden mules or camels; whilst, with the Tatar, he ambles or gallops along, only halting to change horses, full twenty hours out of the twenty-four. Added, that roads, in our sense of the word, are as yet to be invented in Western Asia, and the reader may calculate for himself the amenities of a five or six hundred miles' journey *à cheval* at this last-named rate.

But six months' continuous saddle-practice in districts of country as rugged as any from Scutari to Astracan had hardened sinew and muscle; and it was therefore with but small fear of fatigue that I rode through the Giumruk-Kapou (custom-house gate) of Mosul on that wet November morning, and, in company with Hassan Agha, the courier, and the twelve or fifteen Arab horsemen who formed our escort, crossed over the bridge of boats that spans the broad and rapid Tigris, on our way to Diarbekir. Over the river, our course lay due north along the base of the great mound of Kouyounjik, the largest of the Nineveh tumuli; then across the broad undulating plain that stretches away past Khorsabad to the mountain-range of Jebel Bekhe, northwards, and east to far beyond the Zab. Passing through the narrow and rugged defile that leads up from these great Assyrian plains to the valley of the Khabor, we reached the Kurdish town of Zakho on the second day, and there found Osman Pasha, the governor of Mardeen, encamped with a force of some six thousand troops, regular and irregular, and preparing to commence his march next morning on Jezzeerah, some couple of days' journey ahead. Soon after our arrival at the post-house, the Tatar waited on him with my letter of recommendation from the Pasha of Mosul; but the old savage gruffly declined to receive me; sending me, however, as a sort of softener to this discourtesy, a couple of anatomical hens and a dozen of eggs for dinner. To be even with him, I omitted to present myself at his tent before starting on the following day in company with himself and his armed rabble, and throughout the day's march took not the slightest notice of his presence. We halted that evening at Peshapoor, a village on the eastern bank of the Tigris, where the troops encamped, and the Tatar and myself again put up at the post-house. Having no particular wish to journey further in such company, I sent Hassan next morning to the pasha to request the needful convoy of horsemen, that we might proceed without longer stoppage; but Bluebeard again snubbed him, and ordered us to wait till it suited his sovereign pleasure to send us on. This compulsory halt, however, gave me an opportunity of seeing how his sultanic majesty's subjects fare under pashalistic rule in those remote Asiatic provinces.

Not only was almost every house in Peshapoor laid under heavy contributions of food for the multitudinous rabble (sheep being seized to what extent the marauders liked, and a perfectly exterminating crusade waged against the poultry), but the roofs of very many of the houses were pulled bodily off to supply fuel for the camp-fires. Feeble remonstrances were, indeed, attempted in some instances by the owners, but in every such case a lusty cudgelling speedily silenced the protest. A party of ragged rascals—Albanians they were—visited the post-house with a similar intention, and it was only by the energetic use of a heavily-loaded horse-whip that I succeeded in preventing the rafters from being pulled about our ears, and expelled the intruders. One of the scoundrels drew his dagger, and made a show of fight; but the suggestive "click" of a revolver speedily sent

the weapon back to its sheath, and its owner off after his fellows. The greater part of this day was spent in swimming the horses over the river, and rafting across the men and baggage. The former of these operations, which the breadth and rapidity of the current rendered a work of no trifling danger, was effected by the animals being taken to a point some quarter of a mile higher up the river than that to be reached on the opposite side, and then ridden in till carried off their legs by the stream, when the riders slid off into the water, and held on by mane or tail till the current swept man and horse across to the other shore. Some few venturesome dare devils kept their seats throughout the passage, with nothing but the heads of themselves and their chargers visible above the muddy and eddying surface of the stream. The rafts which bore over the men and *matériel* were constructed simply of tree-branches, lashed together with willow-twigs, and floated by inflated skins. On one of these frail vessels, which form the only vehicles of navigation on the Tigris from Diarbekir to Baghdad, myself and my saddle-bags were wafted across late in the evening. The pasha had crossed some hours before; and I found him squatted under a small open tent a few yards from the landing-place, before a huge brazier of bitumen that lighted up with its red glare the whole shore for a quarter of a mile on either side, revealing to the eye such a scene of yelling activity and wild picturesque contrasts of light and shade as no painter ever fixed on canvas. A "fancy portrait" of Osman himself, to be any way just to its original, would occupy more space than editorial economy permits; theatrical imagination hardly ever placed upon the stage a more Falstaffian type of hoggish sensuality, unredeemed by the smallest spark of intellect. In bodily size and shape, he resembled nothing within the range of my zoological knowledge so much as an over-grown turtle balanced on one end; whilst, facially, a low receding forehead, small gray eyes, overhung by the heaviest of brows, a huge mouth and ponderous under-jaw, betokened only lust, cruelty, and cunning. What I afterwards heard of his character quite proved the truth of this diagnosis. He was one of the few and fast-disappearing specimens of the old ante-Tanzimat régime who still believe that "through unbelievers' blood lies their directest road to heaven." Fortunately for Turkey, these human relics of her "good old times" are passing rapidly away, and their places being occupied by a class who, sceptics though they be, are more likely to postpone for a time the final break-up of her rotten and tottering existence as a Mohammedan power.

Landing thus under his nose, I could not avoid entering the tent and offering Osman a salute, to which the old savage merely answered with the mean-nothing "*Hosh gelden*" (welcome), and soon after rose and withdrew into a large pavilion behind, without adding another word. The civility of an officer of the regulars, however, procured me partial shelter that night under an old sieve of a tent, which kept out a portion, at all events, of the rain that fell in torrents; and to the same individual was I indebted next morning for a temperate meal of water-melon and black bread. When the storm had passed, the Tatar again applied for permission to proceed, but was answered with a peremptory order to wait till the following forenoon, when the whole encampment gradually got into motion, and we journeyed on to a village some four hours nearer Jezeerah. Here we were again detained a couple of days, in spite of my lively protest, and would have been kept still longer had I not boldly beard the old lion in his den, and, in presence of the crowd of petty chiefs in attendance, threatened him with the active vengeance of Lord Stratford and the whole posse of the Foreign Office, if he did not at once furnish the needful escort, and suffer us to proceed. This new style of speech and manner—so different from what I had up to this point employed—carried the day; for the old despot, whom it at first astounded, then sent into a towering passion, and at last fairly floored, judged that one who could venture on the use of such rhetoric must be a

vastly greater personage than he had supposed, and accordingly, without further delay, ordered us a mounted guard of some twenty Abyssinian irregulars. Numerically, such an escort as this was imposing enough; but, when I say that out of the whole score not more than seven or eight were armed with even the usual completeness of such troops, some notion may be formed of their value; their courage being even taken for granted, which is saying much—in an emergency. A couple of them had matchlocks, but no ammunition; one, who rode beside me, boasted a pair of rusty pistols, of which both were flintless; whilst the sole armament of another was an old sabre, firmly tied into a scabbard that had once covered a blade of much larger dimensions; and so was it with the weapons of six or eight of the remainder. Under such "protection," we finally left Osman and his horde behind us about noon, keeping well out towards the edge of the desert, to avoid the neighbourhood of the insurgent villages. Abdullah, who commanded the escort, indeed, protested against all such caution, declaring that, with *him* at their head, his score of men could make mince-meat of all the Kurdish rebels from Bashkaleh to Mardeen; and, in proof of this, he and they charged and routed whole hosts of (imaginary) assailants ahead, behind, and on either side of us as we cantered on over the unpeopled plain.

Shortly before sundown, our course approached the neighbourhood of the outlying villages, the whole of which were Kurdish and committed to the insurrection, when we observed a regular turn-out of the male inhabitants of one of the nearest, hastening towards us, armed with matchlocks, and yelling like demented demons as they came on, *Dhouschmanler! dhouschmanler!* ("The enemy, the enemy!") shouted the Tatar; *T'hôlda! t'hôlda!* ("To the desert, to the desert!") roared Abdullah; and, enforcing the precept by example, off galloped the valorous exterminator of rebels, with his obedient rabble at his heels. For a while the dismayed Hassan, myself, and our couple of *surrâdjers* (mule-drivers) tried to make way with the baggage-horses from our rapidly advancing assailants; but one of the laden animals falling, and the others being unable to move at all quickly over the stony plain, some forty or fifty of the Kurds soon reached within half musket-shot, and began peppering away with most unpleasant approach to precision of aim. One bullet struck the Tatar's horse in the neck, inflicting a slight flesh-wound, which at once determined that worthy to provide for his own safety, and let Abdul Medjid's mail take its chance; and off he scampered desertwards too. Though by far the greater half of my own worldly property was contained in the precious saddle-bags which formed my share of the general baggage, I never felt less disposed to an unevenhanded fight in my life; so, after one or two fruitless shots from my revolver, I abandoned wardrobe, cash, pack-horse, and every thing else to the mercy of the robbers, and headed away after the Tatar and our "guard" as fast as my jaded steed could carry me.

The short eastern twilight had already deepened into night, and, in the gathering darkness, I could discover neither one nor other of the party. At last, after a full half-hour's ride out into the untracked waste, the flash and report of a couple of pistol-shots—fired by Abdullah to signal their whereabouts—guided me to one of the countless mounds that, like huge mole-hills, stud the entire face of these Mesopotamian plains, behind which I found the whole pack of runaways, preparing to return to the pasha's camp. This we succeeded in reaching shortly after midnight; Osman and his force having advanced some three hours (nine miles) nearer to Jezeerah than where we had left them in the morning. Lustily did the old fellow abuse the poor Tatar for our misfortune; then he showered maledictions on Abdullah, and ended with strong language as to the mothers, wives, and daughters of all Kurds in general, and of those of Babila—the scene of our spoliation—in particular.

On the following morning, being unable to procure a guide back to Mosul, I had no choice but to accompany the

force in its march on Jezeerah, some couple of hours off; and here began a series of farcical absurdities which, if fun passed current with the tailor, would have repaid me for all the personalities I had lost. Jezeerah lies in a deep valley on the western bank of the Tigris, the waters of which insulate the town during several months of the year, when the divided stream is crossed by two crazy bridges of boats and an equally dangerous one of stone. The place itself is surrounded by a ruinous circular wall, and would not occupy a single company of European troops half-an-hour in capturing it at any season of the year. This place was the head-quarters of a formidable insurrection, headed by a young Kurdish chief named Yezdinshier Bey, the nephew of the still more powerful and notorious Bedlur-Khan Bey, whose massacre of the Nestorians has been so graphically described by Mr. Layard. Yezdinshier himself was at this time inside Jezeerah, and his capture, rather more than the reduction of the town, was the object of the advancing pasha and his six or seven thousand troops. With this view, on our reaching the high plateau overlooking the town and river, the mounted portion of the force was despatched to cut off retreat into the mountains by forming a close cordon between the latter and Jezeerah; whilst the two companies of regular infantry and the rabble of match-lock men on foot opened a musketry-fire on the town itself, at a safe distance much beyond effective range. Two of the four field-pieces that accompanied the expedition were next brought to bear on the walls, at a distance of some eight hundred yards *with grape*, under the management of an infantry captain, unaided by a single regular artilleryman! This style of practice proving inefficient, the sapient gunner then tried shell, but with no better success; for every shell either burst long before reaching the walls, or, if by odd chance one reached them, exploded harmlessly amongst the gravestones of the large burying-ground within. After a couple or three hours of this kind of assault, the operations of the day ended, and the assailing rabble "hung up their arms" for the remainder of the afternoon and evening; some praying, others baking bread, whilst the rest were variously engaged in pounding coffee, or drinking it, smoking, or singing their dirge-like songs round the camp-fires till midnight. Kurds, Turks, Yezcedies (devil-worshippers), Albanians, Abyssinians, and Arabs,—they formed as motley a *mélange* of human rascality and cowardice as the moon ever shone upon within a similar space of ground.

Next morning, the infantry-artillery captain recommenced his shell-practice with results similar to those of the preceding day. I happened to be standing by one of the guns, and, noticing the poor fellow's embarrassment in the management of his pieces, volunteered a suggestion on the cutting of the fuses. My interference soon reached the pasha's ears, and the result was, a prompt and pressing request that I would supersede the captain, and assume the direction-in-chief of the siege! The rich absurdity of the whole affair, coupled with its affording me the recreation of amateur gunnery at the expense of Turkish ammunition, and possibly of Kurdish limbs, was a sufficient inducement to comply, in spite of all the surly incivility I had met with at the old vandal's hands; and I accordingly consented, on condition that an entirely new scheme of attack should be adopted. Osman was at first unwilling to commit himself to the acceptance of such terms, but finally yielded; and I then proposed, that instead of idly vapouring away with musketry and grape-shot against the walls from an impossible distance, the four guns should be placed in position before one of the town-gates at short point-blank range, and that on the gate being blown open, the place should be regularly stormed by the two companies of infantry. To the last clause of this proposal the infantry *bimbashi* (major) offered warm opposition, declaring that mounted bashi-bazonks were the proper troops to employ for the storming business; but his objection was finally overruled, and Osman, consenting to my plan of assault, betook himself to a high breastwork of stones in the rear, from behind which he

could safely watch the progress of operations. A party of volunteers dragged the guns down to a point within some four hundred yards of the gate chosen for breaching; whilst the rest of the many-tongued cut-throats who formed the besieging force ceased their independent tactics, and clustered along the heights to witness the speedy reduction or demolition of Jezeerah. A shower of musket-bullets, badly aimed, saluted us at the guns, from the crowd of townsmen who manned the walls, as we proceeded to load with substantial round shot. Bang! went the first discharge, the metal missing its mark, and burying itself in the graveyard beyond. The second, third, and fourth followed, little better in aim, much to the noisy dissatisfaction of the crowds behind me, and the defiant joy of the besieged. But this had given us the range; and of the second round only one shot missed the wall, two striking the gate in its centre, and the fourth shattering the upper lintel. Loud, long, and wild were the applauding cheers that now greeted us from the rear; even the old pasha becoming brave for the moment, and mounting to the top of his sheltering parapet to clap his fat palms in approbation of the gunnery. Simultaneously, however, came a volley of musketry from the walls, which killed a couple of my assistants and wounded three others; whilst some of the bullets "pinged" away beyond us to the hiding-place of the pasha behind. The old monster was in the very act of adding a sort of pirouette to his manual gesticulation, when one of these long-range messengers passed through the ample *seat* of his many-folded pantaloons, grazing the nether convexity *en route*. Over he tumbled like a knocked-down nine-pin, into the arms of his attendants, who broke out into the usual shout of *Allah! Allah!* as the old arch-coward fell. In less time than I take to write it, I was left alone at the guns with the couple of dead and the three wounded men mentioned, every one thronging to the supposed death-ground of Osman. It was soon found, however, that his adipose excellency had been more frightened than hurt; but all the peris in Paradise could not have held him within range of rifle-shot five minutes after his recovered nerves enabled him to move back to the remote safety of his pavilion. His retreat thus made good, we went on with the firing, but discovered after a few additional rounds that a strong stone buttress had been raised behind the demolished gate, thus rendering ingress at that point impossible. The guns were then turned upon the crowds that lined the walls, and after a few well-aimed enfilading shots, the musketry-fire from that quarter was silenced. In the meantime, the counsel of the infantry *bimbashi* had evidently weighed with the pasha. A host of mounted bashi bazonks, impatient for the fight, had already been despatched to the opposite side of the town, where a long low gap in the wall, which had been very hastily barricaded, offered a chance of entry by a rapid and well-supported dash. The lowest part of the breach was, indeed, some three feet above the outside level; but, as Kurdish horses will scramble over any thing, it was urged by the *bimbashi* that a storming party *à cheval* had every chance of success. Finding Osman bent on making trial of the suggestion, I had the four guns brought round to the intended point of attack, and after a few discharges of grape had cleared off the crowd of townsmen gathered for the defence of the spot, the storm of bashis swept on with couched lances and discordant yells to the assault. The besieged, however, were prepared for them, and poured in as they approached within short range a volley of musketry that emptied at least fifty saddles before even a single horseman had reached the walls. This sudden and well-timed check threw the whole crowd of assailants into disorder; and, before they could rally, a second discharge from the walls completed the repulse. Save himself who could, was the cry; and within ten minutes from their first advancing cheer, not a man or horse, save the dead and wounded, of the attacking host remained within rifle-shot of the town. Short work was made of the wounded; hardly was the ground clear of the assailants, before the townspeople

swarmed out into the open plain, and with a rapidity that no Chinaman could have excelled, lopped off the heads of every single man, dead or dying, on the ground; after which they rifled the whole, and retreated with their bloody booty into the town. With the exception of a few round shot aimed at scattered groups at various points within and along the walls, we of the attack did nothing more that day. In the evening the old pasha invited me to dinner; but all the fun of the past morning and afternoon had not banished the memory of his previous incivility, and I accordingly declined; Hasean, the Tatar, engaging to forage elsewhere.

During this second day's operations, a mounted Kurd, decked out in the "loudest" of colours—crimson cloak and turban of red, yellow, and black—had been conspicuous for his reckless bravery and energy in conducting the operations of the defence. Wherever the courage of the wall-men seemed to flag, there he turned up, infusing fresh vigour and animating to renewed activity. As he galloped from point to point, the yellow flag he waved was greeted with the cheers of the besieged; but who or what he was none of us "outsiders" could tell. On the morning after the repulse just narrated, he again made his appearance, caracoling with his yellow pennon from point to point as before. Innumerable rifle-shots had been sent after him on the previous day, but only to the waste of so much powder and lead; and, accordingly, old Osman now resolved to try his vulnerability with a six-pounder field-piece. I declared my inability to hit him; but no excuse would be accepted, so we double-shotted the whole four guns, and laid them for the line of his usual ride. The yellow flag was soon espied approaching, at a rapid canter, the open ground of the grave-yard. Flash and bang! went a couple of the field-pieces, as he came within point-blank range. The shots from both went over him; but, striking the ground a little beyond, *ricochetted*, and ploughed through a group of the townspeople some couple of hundred yards further on. Defiantly on came our mark, seemingly proud of being thus singled out for a special cannonade. Shot No. 3 went "nowhere," but the fourth and last covered him with a cloud of dust, and knocked over a poor buffalo that happened to be grazing peacefully half-a-perch off amongst the graves. Considering this last result to be gunnery of a high order, the crowds behind made the welkin ring with applauding cheers. Directions then came from the pasha to turn our metal on the principal mosque of the town, his orthodox excellency falling back on this last resource of baffled strategy in hope that, to save the sacred edifice from destruction, the *mollahs* (priests) would bring their rebel townsmen to repentance and capitulation. Against this easy and conspicuous target I banged away, *con amore*, for some dozen of rounds, at the end of which, the gallery round the minaret having been knocked away, and the dome "hulled" in several places—the old infidel, probably awakening to the scandal of suffering a *giaour* so to desecrate a temple of Islam, sent orders to cease firing. Simultaneously a huge white flag was waved from the town-wall, and a few minutes later a deputation, consisting of a *seyd* (green-turbaned descendant of the prophet), the *cadi*, and a *mollah*, entered the camp to propose terms of surrender. Yezdinshier, they said, had escaped to the mountains two days before, leaving Jezeerah in the hands of a lieutenant, who now offered to lay down arms and admit the pasha on the condition of a general amnesty. These terms, however, Osman refused to accept, insisting on a complete evacuation of the place before he moved a yard nearer the walls. The deputation then left, to consult their "constituents;" the old boaster apprising them that, unless his offer were accepted before noon of the following day, he would demolish the town, and hang every tenth man, woman, and child found inside its walls, commencing with themselves—the *seyd*, *cadi*, and *mollah*.

Having myself had enough of the adventure, and seeing no immediate prospect of its termination, I bargained that

evening with an independent bashi-bazouk to guide me back to Mosul. We left the camp privately about midnight, and after a four days and nights' journey down the banks of the Tigris, I reached the hospitable gate of the English consulate, moneyless, clothesless, and worn out with fatigue. On the second day after our flight from before Jezcerah, the townsmen made a sally *en masse*, routed Osman and his entire host, and captured tents, baggage, and every thing else, the old pasha himself having a narrow escape from falling into their hands. Some weeks after, when I had crossed the north-eastern spur of the desert under the care of an escort of the Shammur Arabs, I met him at Nisibin, when he expressed touching regrets that he had not closed with the first offer of capitulation. "For," said the old monster, "once master of the place, I could have massacred the sons of dogs as I liked; but, no matter, inshallah! I'll be wiser again." I passed on to Diarbekir, thence across the top of the desert by Orfah, and over the main stream of the Euphrates at Birejik into Syria; by Aleppo and Antioch to Scanderoon, and thence by steamer to Constantinople and the Crimea. Since then I have journeyed into other parts of Asia, but nowhere have I encountered at once so much of the annoying and the laughable as during that memorable fortnight before JEZEERAH. M.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE contrast of the East and the West has been a fruitful subject for speculation. Let us now glance at a recent illustration of the theme, which in itself contains a whole history.

We were at war with Persia; and a special ambassador was despatched by the shah to negotiate a treaty of peace. How this ambassador travelled, and how he fared before he arrived at Constantinople, it is not our object to inquire. But at that port he gave himself into the hands of the great magician "Steam," the principal servant of Western civilisation; and in the face of adverse winds, and independently of tides and currents, he is transferred in a few days from the shores of the Bosphorus to the coast of Provence. He lands at Marseilles; and an occasional stare at his oriental costume, as he passes from the floating palace called a steamer to the stationary one called an hotel, is all that indicates to him that the subjects of the emperor of France are aware that an envoy from the "king of kings" has alighted on their shores. But though no imperial *cortège* crowds around him to invest him with importance, and no imperial orders fly through the country to extort from unwilling subjects a night's lodging and a meal for the guest of their ruler, he finds himself surrounded by every comfort and luxury that man can wish for, science can invent, and art can create. Having rested from a voyage which has not presented a single hardship, except, perhaps, the tribute which that old conservative Neptune persists, in defiance of the modern triumphs of civilisation, in exacting from all landmen who commit themselves to his element, the ambassador starts for Paris in a commodious saloon, with cushioned divans and mirrors and many other appurtenances of comfort and luxury, and through which hot-water pipes diffuse a genial warmth, in spite of the snow and frost without. Again steam, who realises the fabled miracles of the wishing carpet so famous in oriental tales, speeds him on his journey. On the train flies, like an arrow shot from a bow, across rivers, *through* mountains as through plains and valleys, past cities, villages, and hamlets, without his ever having to displace himself from his cushioned seat. When a short halt is made, comfortable apartments,

blazing fires, and tables spread with the richest dainties, offer change and refreshment, not only to the friend and envoy of the mighty shah, but to every obscure individual travelling in the same direction; for private enterprise, that other trusty servitor of western civilisation, takes care of small as well as great. Some hours suffice to carry him over the hundreds of miles that lie between the shores of the Mediterranean and the French capital, where neither the lions of the Boulevards or of the Jardin des Plantes set themselves in motion to meet him. Imperial carriages perhaps convey him to the Tuileries; and there no doubt his oriental tastes and prejudices are soothed by some of the pomp and ceremony so dear to Asiatics; but the Parisian world hears of his arrival only through the press, and the news creates no commotion, except it be in the imagination of some youthful belle, whose tastes for *cachemires* and jewellery have developed in her a decided predilection for eastern princes.

Once more steam whirls the eastern envoy into new regions. Twelve hours, and the scene has shifted from the capital of France to the capital of England, from the sunshine of Paris to the fogs of London, from the city of pleasure to the city of trade; but here, as there, he passes in unnoticed, a unit among hundreds of thousands too much accustomed to a life of endless variety, of constant changes, and of great events, to heed the arrival of an ambassador from "the pole of the earth," come to put an end to a war possibly fraught with danger to our Indian empire. On the very day of his arrival, Feruk Khan appears before the English public as the last invited guest at a Lord Mayor's feast, so signal a victory has the nonchalance of western manners gained over the rigid propriety of eastern etiquette. At the Mansion House he sees the men who rule the British empire in the name of the sovereign lady, to whom he has not yet been presented, and hears them in an after-dinner speech justify their governmental acts to a miscellaneous assembly of their countrymen of various ranks and classes, all meeting here on a footing of equality; while the latter mark their approval by thumps upon the table that make plates and dishes dance. Here also he has an opportunity of seeing the beautiful daughters of England, joining not only in the public conviviality of the other sex but in their political conversations, and probably realises for the first time how it is that the mightiest kingdom of the earth is ruled by a woman. At Lord Mayors' banquets lions are appreciated; and here the shah's ambassador may for a time have felt himself of consequence; but as the novelty of his costume wore off, he ceased even there to be an object of general attention, and two days after his presence in the country was forgotten.

Now let us look at the East. Towards the close of the reign of Louis Philippe, the French government, wishing to recover some of its lost influence in Asia, despatched an embassy to the Shah of Persia. A French ship of war conveyed the ambassador and his suite to Trebizonde. Hence, having secured two hundred mules and horses to convey themselves and baggage, the mission set out in the month of December on its land-journey through Armenia to Teheran and Ispahan, passing through a country covered throughout with snow to a depth of from five to six feet; across mountains, where the wolves and the bears only have tracked a path; through roadless plains, over which dull silence reigns; through trackless forests, where their path is constantly crossed by frozen torrents. By day the caravan moves on slowly and painfully, pack-horses and mules now sinking into the snow, now stumbling into a ravine, now rolling down a precipice; while the cavaliers are obliged to alight from time to time to thaw their frozen limbs, or to avoid the perils which threaten them as they pass along ledges of slippery rock, bordered by yawning abysses, and the mountain-storm drives the snow into their faces and renders them almost blind. At night, halts are made in wretched hamlets, where miserable stables serve man and beast alike for resting-places, or where an imperial order

extorts for the foreign *elchi* (ambassador) a reluctant hospitality under the squalid roofs of the surly inhabitants, who find it hard (and who can wonder?) to remove from their hearths, where a smouldering fire of cow-dung affords some slight degree of warmth and comfort, to make room for a troop of insolent strangers, though they may be the guests of the sultan. But what is wanting as a general rule in point of ease and comfort, and the common decencies of civilised life, is made up by occasional pomp and ceremony, and intervals of Capuan luxury. When the ambassador passes from one pachalic into another, or approaches a town of some importance, he is welcomed with military honours, and escorted to his temporary dwelling with every mark of deference and respect, the whole population of the district or the town gathering along his path to witness his triumphal entry. At Erzeroum, Hafiz Pacha has prepared for him apartments, with rich carpets and soft divans, and fireplaces well supplied with wood, which diffuse a genial warmth, to which the weary travellers have long been strangers; and for their consumption during the five days they purpose spending in the Armenian capital, he has provided 6 oxen, 12 sheep, 1000 eggs, 60 fowls, 100 pounds of coffee, 30 pounds of honey, 3 jars of wine, 200 pounds of tobacco, 200 pounds of butter, and sugar, wax-tapers, &c. in equal abundance. At Bayazid, perched like an eagle's eyrie upon its rock, the pacha is absent upon a foray against some predatory Koords; but his son receives the ambassador with the prescribed pomp, and domiciles him in his father's splendid serail, built of beautifully sculptured marble, ornamented with fresco-paintings and rich gildings of exquisite taste, and furnished with the voluptuous magnificence peculiar to the East. Three miles from Bayazid commences the Persian frontier. Here the son and nephew of the governor of the district, at the head of a brilliant troop of cavaliers, dressed in a curious costume, half-Oriental, half-European, await the arrival of the mission to welcome the ambassador in the name of the shah; to assure him that "all that he beholds is his;" and to serve him as guides and escort during his progress through the Persian territories. But although this royal escort can command every where the respectful submission of the people to the wishes of the foreign *elchi*, it cannot change the condition of the country and of the inhabitants; and for three more mortal months the jaded wayfarers have to encounter fatigues and privations of all kinds, before they come in sight of Teheran.

At some distance from the gates of the royal city a new escort comes out to meet them, and to perform the ceremony called by the Persians *istakball* (literally, "the going out to meet"). Heading the cavalcade are the principal officers of the *begler-bey* (civil commandant) and of the *serdar* (military commandant) of the city. Invited by them, the ambassador dismounts at the entrance of a magnificent tent of crimson-cloth, richly embroidered with gold, where a collation awaits him. This over, the whole company, in procession, set themselves in movement towards Teheran, the horsemen in advance having to break a way through the surging sea of human beings who have thronged out of the city to welcome the *elchi*. Here are dancers, musicians, and mountebanks, the latter disguised in various fantastic ways, and dragging along in leashes, or carrying on their shoulders young tigers, bears, or monkeys. Next to these are wrestlers, naked down to their waists, describing circles in the air with huge clubs, and writhing in strange contortions, which throw out in relief their powerful muscles. Then come the pastrycooks, the fruiterers, and the confectioners of the bazaars; the latter break vials full of sugar-plums at the feet of the ambassador's horse, and the former offer their cakes and fruit for his acceptance. Water-carriers, laden with enormous casks, sprinkle the road as he proceeds; and intermingled with all these are thousands of idle spectators, come out to witness the show. Even the very lions of the shah are brought out by their keepers to welcome the shah's guest; and above the roar of the animals and the hum of the multitude is heard the piercing *Jâ-ali* of the

dervishes. These fanatics, armed with long sticks or massive clubs, garnished with iron-spikes, and distinguished by their long hair and the skins of wild-beasts that cover their shoulders, excite the multitude by their wild cries and frantic gestures; and thus accompanied, the ambassador of France enters the capital of Persia amid the din of artillery and the shouts of the population.

But the Shah of Persia has gone to Ispahan; and thither, after five days of rest, the French ambassador and his suite follow him. At Ispahan the same ceremonies await them. Three hundred splendidly-attired cavaliers receive them at a short distance from the city. Nobles of the highest rank compliment the *elchi* in the name of the sovereign, and offer him refreshments under splendid tents; and surrounded by thousands of the population, in addition to his royal guard, and preceded by a double file of *nazakchis*, or heralds, clad in trailing robes of crimson, and turbans formed of red shawls, he enters Ispahan with the same pomp as he entered Teheran.

Three days must elapse—thus Persian etiquette will have it—before the foreign *elchi* can be admitted into the august presence of “the pole of the earth;” but the fourth day having been declared propitious by the astrologers who have been consulted, it is fixed for the presentation. Horses are sent from the royal stables to convey the envoy and his suite to the court. Preceded by a guard of soldiers, and by a host of officials of various grades, he repairs to a small kiosk adjoining the royal residence, where the Minister for Foreign Affairs does the honours of the pipes and tea, without partaking of which no guest must leave the royal palace, but which mark of hospitality the etiquette does not allow the shah himself to offer. Next, the *mirza* conducts the legation through a long gallery into the little palace of *Hapht-Dest*. Lead on by the grand master of the ceremonies they then enter a spacious garden, and advance up a long avenue lined with soldiers formed *en haie*, who present arms as they pass. At the bottom of the garden is a pavilion, in which the shah awaits them; and as soon as they come in sight of this the grand-master intimates that a profound obeisance must be made, though as yet the august object is quite invisible. At length the pavilion is reached, and the “star of stars” breaks upon their sight. The prostrations of the Persians, and the profound salutations of the Europeans, of course recommence. Introduced into the interior of the pavilion, the members of the embassy are ranged according to rank along the wall opposite to the shah; two more obeisances are performed, the master of the ceremonies pronounces a few words of introduction, and the shah makes a sign to the *elchi* to be seated. The rest remain standing.

The apartment in which the reception takes place is a small saloon, divided into two equal parts by a stream of running water, forming in the middle a basin with a fountain, and the walls and ceiling of which are richly decorated with paintings and gildings. The shah is seated in an arm-chair inlaid with ivory, mother-of-pearl, and gold, and placed on an *estrade* within a niche. His costume consists of a tunic of crimson cloth embroidered with pearls, and fastened round the waist by a belt glittering with jewels. On his head he wears the black sheepskin cap that denotes the Kadjar dynasty, but this is encircled with a coronet of large diamonds, surmounted by an *aigrette* of the same precious stones.

Persian etiquette requires that the ambassador shall speak first. He does so through the medium of his interpreter, who pronounces a speech richly interlarded with oriental tropes and compliments, to which the shah, evidently pleased, gives a brief answer. The credentials of the ambassador, inscribed on superb vellum, enriched with many-coloured scrolls and golden arabesques, and enclosed in a magnificent silken bag embroidered with gold, are then handed to one of the secretaries, who, holding the precious burden with both hands, ascends the steps of the throne, and deposits it at the feet of the shah. The various members

of the legation are next presented, and the embassy withdraws, walking backwards, and making profound obeisances from time to time. The last *salamaleks* are performed outside in front of a window, through which the shah may still be seen sitting motionless on his throne.

POLYGLOT READINGS IN PROVERBS.

A HIRED HORSE TIRED NEVER (Scotch).—That is the user's creed, but not the owner's; for few are so tender of other people's property as of their own. “A hired horse and one's own spurs make short miles,” says one German proverb; and another declares that they soon outstrip the wind.

HAVE A HORSE OF THINE OWN, AND THOU MAYST BORROW ANOTHER'S (Welsh). “People lend only to the rich” (French),—*On ne prête qu'aux riches*. “People don't give black-puddings to one who kills no pigs” (Spanish),—*A quien no mata puerco, no le dan morulla*.—In Spain it is usual, when a pig is killed, to make black-puddings, and present some of them to one's neighbours. There is thrift in this interchange of civility, for black-puddings will not keep long in that climate, and each man generally makes more than enough for his own consumption. “To one who has a pie in the oven you may give a bit of your cake” (French),—*A celui qui a son pâté au four, on peut donner de son gâteau*.

W. K. KELLY.

CHARLES MACKAY, LL.D.

WE give this week a portrait which will be every where prized, because the claims of its original are every where felt. Dr. Mackay has a double title to public gratitude. He is not only one of our best known poets, but he is foremost amongst those who have held the poet's inspiration to be a trust. In his strains of varied music, whether they touch us by pathos, rouse us by their manly truth, or cheer us by their genial faith in our future,—we can recall no single note that vibrates from a morbid string, or that does not ask its response from our moral sympathies. Those “Voices from the Crowd” and “Town Lyrics,” which have had such wide echoes both here and in America, could only have issued from a mind in which the uses of imagination were linked with its delights. Possessed of qualities that appeal to a refined and subtle taste,—qualities felicitously shown in the *Salmandrine*, *Egeria*, and in the exquisite pictures in *A Lump of Gold* and *Under Green Leaves*,—Dr. Mackay, in his poems of more social and political significance, has expressed the sympathies that come home to the people.

Dr. Mackay is now on the eve of a visit to the United States. We doubt not that his works, widely known there, will win for their author a cordial greeting. He proposes, we believe, to lecture to our transatlantic brethren on “Songs, Popular and National.” No one could be better adapted for such a task than one whose emotions flow naturally into music. There is a rumour, too, of another and novel entertainment from the same source, namely, the public reading by the poet of an unpublished narrative-poem. We hope so attractive a feature in his programme will not be confined to America, but that we shall have the benefit of it on his return.

It is satisfactory to add, that Dr. Mackay retains his connection with the *Illustrated London News*, which has prospered so signally under his auspices; and that, after a brief absence, he will again devote himself to the interests of that journal. Meanwhile he takes with him our fervent good wishes, and will meet with a welcome as warm in the land to which he is bound.

CHARLES MACKAY, LL.D. FROM A MEDALLION BY A. MUNRO.

GREENHILL HALL.

BY MRS. C. CROWE, AUTHOR OF "SUSAN HOPLEY," ETC.
IN SIX CHAPTERS.—CHAP. I.

SOME years ago, there resided in the north of England a family of the name of Lupton—the Luptons of Greenhill Hall, they were called; they were Quakers, though for convenience, I shall omit their characteristic phraseology; and for centuries the family had inhabited the same venerable old mansion. Their residence, however, scarcely fulfilled the idea of a mansion; it was something between a farmhouse and a manor-house. There was, for example, no carriage-drive up to the door; but a small white wicket, which opened into a garden, or rather a court, with a large plot of well-mown turf on each side, divided by a paved walk to the porch. The house was gabled, and consisted of only two stories; the windows were latticed, the rooms low, the ceilings and cornices beautifully carved, and there was a hall of considerable dimensions that no antiquarian who came into the neighbourhood omitted to visit. The walls of the court and the house were covered with a luxuriant growth of ivy; and a long grove of fine old sycamores led from the extremity of Mr. Lupton's enclosure, in that direction, straight up to the wicket.

From the court there was no inlet or outlet but this one wicket; the back entrance, for servants and tradespeople, was behind the house, and it was reached by a path which turned off to the right, outside of the little gate. Mr. Lupton farmed a considerable quantity of his own land; and on each side of the sycamore grove extended a wide expanse of pasture, which was called the Park, and was bordered by plantations of young wood; in the rear was a large walled garden, with dairy, stables, and outhouses. The farm-buildings were situated about a quarter of a mile from the house, and all around the land was divided into fields in a high state of cultivation.

In short, nothing could look more prosperous, comfortable, and well-to-do, than the whole estate; and the owners were thoroughly in accordance with all that surrounded them,—worthy, sensible, plain people, respected by their neighbours, high and low; and, from their easy circumstances and ancient family, holding a very good standing in the county.

I have been rather particular in this description; but it will presently be seen that these details are not unimportant or irrelevant to what I have to relate.

Though belonging to the Society of Friends, these good people by no means shut themselves out from the world; they hospitably entertained their neighbours, and visited

"I asked some folks in a dog-cart, as had been to the races, I s'pose, and they told me I war to take the first turn to the left, and then go straight on till I comed to a village, and that Mr. Lupton's war half a mile beyond the village, and that I should know it by a long avenue of sycamores; they said I couldn't mistake it, 'cause it war the only gentleman's house near. It be easy to find, you know, sir."

"Well?" said Mrs. Lupton, whose wonder was excited to the last degree.

"Well, ma'am, I druv hard, for I didn't want my master to know I'd taken up a back fare; and when we got near the house,—just to about that third tree, ma'am,—I heard her say, 'Stop!' and afore I could get off my horse she had opened the door, and jumped out. 'Never mention this whilst you live,' says she, in a stern sort of way, and she gived me another guinea; and then she waved her hand, as if bidding me be off. So I turned my horses' heads, and druv back with a light heart, for I war young then, and I never had so much money afore; but it brought me no luck, for I lost it all, and my place too."

"How did you lose it?" asked Mr. Lupton.

"Well, I don't know, sir. I don't know whether I war robbed, or whether I lost it out of my pocket. I war so pleased, that I stopped at the Bull to take a glass, and I'm feared I took a leetle too much; for when I got back they said I war drunk, and my master turned me away; and sin' that I've been driving for the Lion at Chesterfield."

"And is that all you know about the lady?" asked Mrs. Lupton, considerably disappointed.

"That's all, ma'am; I never seed the lady afore nor since."

"And you've no idea who she was?"

"No, ma'am; I thought she war a friend of the family, belike."

"No," answered Mrs. Lupton. "The truth is, she was quite a stranger, and we have never been able to learn who she was, nor where she came from."

"I've often thought on it since," said the man. "She war a beautiful young lady, and dressed beautiful too; but, somehow, I warn't comfortable when she spoke to me. I've often told it to my old mother; and she says she shouldn't be surprised if she war something *no canny*, as they say in the North, and that's why I could never find the gold; but them's nothing but old wives' tales, ma'am, I s'pose."

"I suppose so too," replied Mrs. Lupton, half-inclined to adopt the old lady's conjecture.

"I war rather curious about her too," rejoined the man; "and when I'd turned my chaise round, I stood up on the footboard, and looked over the top of the chaise, to see what she was a-doing; and I seed her open that 'ere wicket, and walk up to the porch."

"And where did she go then?" asked Mrs. Lupton.

"In at the door, I s'pose ma'am, for I lost sight on her all in a minute."

"Well," said Mr. Lupton, "I'll send somebody to show you into the house." And having directed his servants to give the man some refreshment, he and his wife returned to their friends, and, by way of excusing their absence, told them the history of the White Lady. "And I almost wish," said Mrs. L., "that we had not heard the man's story; for it has only left us more perplexed than ever."

Six years more slipped by, and the White Lady and the post-boy survived only as a tale for a winter's fireside; when it was rumoured that the great-grandson of old Sir Theobald Maxwell was coming back to inhabit the Grange. Old Sir Theobald was a sort of myth in the neighbourhood. For years nobody precisely knew why, but to the minds of the peasantry around his name represented an impersonation of every thing that was violent, arbitrary, despotic, and cruel,—a father or a husband "like old Sir Theobald," or "as bad as old Sir Theobald," was a comprehensive condemnation that every body understood, though not one could allege any foundation for their fixed belief that "old Sir Theobald was an awful man."

This entire ignorance was not only owing to the many years that had elapsed since he had run his career, but also to the total absence from the county of every member of the family, and the entire cutting-off of all connection with the Grange. Nobody now knew why or whither they had gone, or even whether any of the family were in the land of the living; that is, the generality of people did not. Those who read the newspapers might learn that there were Maxwells in India, and amongst them a Sir Thomas Maxwell; though few know, or cared to know, whether he was a descendant of old Sir Theobald, or claimed his parentage across the border. The Grange had been let to successive tenants, on leases for longer or shorter periods, and the rents had been received by agents, who were responsible to somebody in London. In short, except for the use, or abuse, they made of his name, old Sir Theobald and his family were utterly forgotten. So when the news arrived that his great-grandson Sir Thomas was coming home from India to inhabit the Grange, people were almost as much surprised as if they had heard that Sir Theobald himself was about to reappear.

However, if the new baronet was to be judged of by the symptoms that foreran his arrival, he was likely to prove a very different sort of person to his ancestor; for the Grange, which was a large, solemn, dreary, nay, ghostly-looking mansion, was converted, under the direction of a skilful builder, into a cheerful, habitable, handsome house; and the formal garden, with its high hedges, clipped yew-trees, and stone-basins, was extended into a fine pleasure-ground, with flowers, lawn, and lake.

When the place was completed, several servants appeared, and an upholsterer came down from London, who superintended the arrival and arranging of the new furniture, which was entirely in keeping with the taste that had directed the other alterations; and at length, when all was ready, Sir Thomas came himself, bringing with him a wife and a family of children, varying in age from ten to twenty. The preparing of flags, and the weaving of laurels, and the practisings of the village-band, that preceded this eventful day, kept the neighbourhood in a state of excitement; and when they galloped through the village,—Sir Thomas and my lady in the first carriage, and two others following with the young people,—the cheers that deafened them testified to the heartiness of their welcome, and the hopes their return had awakened; for it was certainly not the recollection of past benefits, but the prospect of favours to come, that inspired these eager manifestations.

This enthusiastic reception, such as is apt to await the arrival of people, good and bad, who travel with four horses, was apparently not erroneously bestowed on this occasion; for no sooner was Sir Thomas settled at the Grange, than he gave a grand entertainment, to which all the country round was invited, high and low. Oxen and sheep were roasted, barrels of beer tapped on the lawn, tents were erected, and the whole house thrown open to visitors. To these public entertainments succeeded a series of more private and select ones; dinners and balls followed each other, for Sir Thomas said he had a long debt of hospitality to pay, and that he wanted to make acquaintance with his neighbours.

Amongst the rest, Mr. and Mrs. Lupton were frequently invited; and one day, as Sir Thomas and Mr. L. were sitting together over their wine, and no other guests were present, the former, alluding to his improvement, and the cheerful aspect they had communicated to the place, said, "Yes, I think we have dislodged the ghost at last."

Mr. Lupton laughed, as most people do at mention of a ghost, though, I confess, I never could exactly see why. "Yes," said he, "it was just the place for a ghost; but I don't think I ever heard of the old house being haunted, though I wonder it has escaped the imputation."

"Has it escaped?" asked Sir Thomas.

"I believe so," said Mr. Lupton, surprised at the earnestness of the question. "I never recollect hearing any thing of the sort."

"Well, so much the better," answered Sir Thomas; "but I am surprised you never heard of the ghost."

"Never," said Mr. Lupton. "What's the story?"

"Don't you know the cause of our family's expatriating themselves? You've heard of my great-grandfather, old Sir Theobald?"

"Of course; he died in India, I believe."

"Is it possible you are unacquainted with the tragedy that connects your family and ours? I know that the thing was hushed up in a way that such things can't be hushed up now; but I was not aware the secret had been so well kept."

Mr. Lupton's curiosity was of course vividly excited; and to satisfy it, Sir Thomas proceeded to relate what follows:

The Grange family were a branch of the Scotch Maxwells, who had brought from over the border more pride than pelf. As Sir Thomas said, they were half savages, with an interminable genealogy and barren rent-roll, who inhabited a ruined tower, whence they looked down with contempt upon all the world, except a few Scotch families of equally ancient blood. A sister of Sir Theobald's father had, to the disgust of her relations, married a prosperous Englishman; and when he died, he left this place to his widow, and she bequeathed it to her brother, on condition it was never to be sold; for she respected her husband's memory and wishes, and she knew well enough, if left free to do so, the estate would be quickly turned into money to repair the broken-down fortunes at home. Sir Theobald was the second son, and the favourite of his father, the first possessor of the Grange; and when he died, he left it to him, being on very ill terms with his heir. This heir, the elder brother, was already married; but his two sons died young; and being therefore indifferent about his successor, he left the Scotch property so deeply in debt, that Sir Theobald, on inheriting the baronetcy, gave up the remnant to the creditors to make the best they could of it, and took up with the Grange as his permanent home.

By this time he was drawing towards middle age, and the impression he made on his arrival does not seem to have been an agreeable one. Tall, gaunt, high-shouldered, and hard-featured, such were his outward characteristics; and he had not been long at the Grange before certain manifestations, of what was within this rugged exterior, confirmed the unfavourable opinion. He brought with him from Scotland a wife and two sons, over whom, it was soon perceived, he exercised a barbarous and despotic tyranny. The lady, who bore the remains of considerable beauty,—for they were but remains, although she was some years younger than her husband,—appeared utterly broken in health and spirits, and to have but one interest or object left in life, which was to shelter her sons from their father's harshness and cruelty. It was a miserable household; servants could not abide it, and invariably gave warning at the end of the first quarter. After a few attempts at visiting, the gentry relinquished the attempt, and at last tacitly agreed to leave the tyrant and his victims alone; and thus, shut up with their own wretchedness, the name of "Old Sir Theobald Maxwell" became a by-word in the neighbourhood.

One morning the world outside this abode of desolation were startled by hearing that Lady Maxwell was very ill; a physician was sent for, who pronounced her past hope; she died, and was buried; and every body said her husband had broken her heart, and that it was a worse murder than if he had shed her blood; and so it was, no doubt. Every body, too, pitied the poor boys, and wondered what on earth was to become of them now their protectress was gone.

But the mother had asked herself this question, too, and bethought herself how she could extend her protection beyond the grave. Achilles had a vulnerable heel; and Sir Theobald, case-hardened as he was, had one accessible spot,—he was, what is called, exceedingly superstitious. From his infancy he had heard of apparitions, haunted houses, second sight, and all those phenomena which, on whatever

foundation, were currently believed in some years ago amongst the sequestered regions of his native country. There were legends in his own family that, if not avowedly, were secretly credited by the members of it; and there was a room in the old tower of Glengree that nobody ever slept in. Lady Maxwell, well acquainted with this penetrable side of her husband's character, took advantage of it for her children's defence. Under the threat of haunting him if he did not comply with her wishes, she extracted a promise, when she was dying, that he would immediately send her boys to school; and, as soon as they were old enough, let them go to India, where she herself had relations,—as far as possible from their home; that was their only security. He promised, and he kept his word. She was no sooner laid in the earth than they were sent away to an academy; and every body rejoiced to see the poor boys released, before their health was ruined, and their spirits broken, by their father's tyrannical rule.

THE SILVER FAN.—AN ELIZABETHAN LEGEND.

By G. W. THORNBURY.

Frothing up liquid silver

The jetting water mounts;

It leaps in crystal bubbles

From a hundred marble fountains.

In the broad palace-gardens

The strutting peacock ran,

Waving the emerald circles

Of his resplendent fan.

With cloak of golden tissue,

With jewelled cap and plume,

With rustling scented mantle

Paced sprightly page and groom,

Holding the train of velvet

Behind Sir Walter's bride,

Waving her fan of silver,

Her head thrown back in pride.

Past countless lines of windows,

Through gateways, courts, and doors,

The laughing gay procession

With soft low music pours,

Till through a small low postern,

And up a winding stair,

They reach the "Maiden's Turret,"

And breathe the fresher air.

Below them spreads a region

Of valley, lake, and hill,

Broad meadows of gold, where cattle sleep

In the blue vapour still.

O far beyond the city,

Bright in the sunshine, lay,

Its towers and steeples glittering

In the full blaze of day.

Up rose the sound of voices

From garden, field, and court;

The gardener's ceaseless hammer,

The pages' noisy sport,

The ploughmen whistle yonder,

The jesters run and shout,

The birds from May-flower bushes

Spread music all about.

The talbots on the gateway

Turned golden in the sun,

Over the scutcheon'd dial

The boding shadows run;

The flag on the old clock-turret

Shook fluttering slowly forth,

Flapping in lazy splendour

In the breath of the half-lulled north.

The lady from the turret
Looks down on the massy keep;
Far in the moat beneath her
The water-lilies sleep.
The lady laughed to see the doves,
That in swift circles flew,
Scarce settled ere a second cloud
Of white from the dovecot blew.

In sport at the circling flyers
She struck with her silver fan,
The work of some dusky fingers,
In the heart of the far Deccan.
It fell from the hand of the lady,
O'er the wall five fathom down;
She looks at her crowd of gallants
With an inquiring frown.

They all, half 'mazed and silent,
Peer over the long gray wall,
Where, far below, the moat ran dark,—
A good five-fathom fall.
That moment cap and mantle
Willy the page let go,
And down flew from the parapet
Into the moat below.

She had not time a single sigh
To breathe for the silver fan,—
No time to say, "In all my train,
I know no lion man;"
When faster than a lark returns
To its remembered nest,
Willy the page sprang over,
Shaming *indeed* the rest.

They hear a splash, and looking,
Saw Willy sinking down.
In a moment he rose laughing,
Breasting the waters brown:
Shaking the trails of long green weed
That to him dripping ran,
Over his head exulting
He waves the silver fan.

Over the drawbridge running,
And through the postern-door,
Light as a young fawn bounding
Over a mossy moor.
"I hear him breathing loudly,—
I see his dripping hair."
And now, all flushed with pleasure,
He races up the stair.

Through a crowd of eager faces
Willy the diver breaks,
And in his hand exulting
The silver fan he shakes.
He kissed his lady's mantle,
Down at her feet he kneels,
Then, faint with toil and travel,
To a stone seat he reels.

She smiles with proud contentment,
As if a life were naught,
And every danger well repaid
By the smile that nobles sought.
He staggers to the parapet,
Leans head upon his arm,
The train sweep off exulting,
And leave him resting calm.

But one who, curious, lingered
Strove to arouse him then
(He must have been of softer heart
Than all the other men).

Too late; indeed already
The brave lad's soul had flown,
And was already standing
An angel at God's throne,

VENTILATION: ITS VITAL IMPORTANCE AND EFFICIENT APPLICATION.

[Second Paper.]

CIRCUMSTANCES, even of the most appalling nature, make little impression on the public mind. The fate of the prisoners in the Black-hole at Calcutta; the occasional instances of suffocation in vessels at sea, when, during a storm, the passengers have been shut up for a few hours under close hatches; the cases of fever, and other diseases arising from bad ventilation, in emigrant vessels; and the constantly-recurring instances of death from the use of burring-charcoal in sleeping-apartments, and all such like calamities, are generally attributed to causes beyond the ordinary course of events.

It is only from a knowledge of the chemical properties of the air we breathe that a correct idea can be formed of the importance and necessity of proper ventilation. Now the fact is well known, that in places where a candle will not burn an animal cannot live. Any person, therefore, may, by a simple experiment, convince himself that air, after it has once passed through the lungs, becomes unfit for supporting combustion, and consequently cannot a second time perform the same function in the process of respiration. To those who may not have minutely observed the manner in which gases are collected, we may explain how this may be performed without the apparatus generally employed for that purpose by the chemist.

Place a tumbler in a basin of water, in such a way as completely to expel the atmospheric air; invert it, and raising its edge to within a little of the surface of the water in the basin, introduce, through a small tube,—such as the shank of a tobacco-pipe,—air that has been retained for a short time in the lungs. Remove now the tumbler from the basin on a plate, with the mouth still downwards; and having turned it up, without allowing any of the respired air to escape, plunge into it a lighted taper. It will immediately be extinguished; and so, in like manner, would any animal expire if confined to such an atmosphere.

The breathing of pure air, therefore, is not, as many seem to think, a luxury that may be dispensed with, as some abstain from wine or tobacco; but is absolutely necessary for the preservation of the health, and even of the existence of man.

It has been computed that at each expiration a man passes through his lungs about 31 cubic inches of air. Allowing, on an average, 18 expirations a minute, this will amount to nearly 20 cubic feet an hour (upwards of 120 gallons). The flame of an ordinary gas-burner vitiates, to the same extent, three times that quantity in the same time. Were four persons, therefore, to be shut up in a room of ordinary dimensions,—say 14 feet square by 10 feet high,—with two gas-jets burning, they could not, under any circumstances, live longer than ten hours, and would, in all probability, die much sooner. Such an apartment so occupied would require, according to the numerous and carefully conducted experiments of Dr. Reid, 100 cubic feet of fresh air per minute, which would renew the whole three times every hour. In the open air, the products both of respiration and of combustion are floated away imperceptibly by a

simple and beautiful arrangement of nature. All gases, in common with other substances, being expanded by heat, have a tendency to rise in the atmosphere. The air in passing through the lungs acquires a temperature of from 30° to 40° above the surrounding air; that in contact with gas-jets, about 400°. These products, therefore, though consisting chiefly of the heavy and suffocating gas termed carbonic acid (or choke-damp), are sufficiently rarefied to ascend, and give place, when unconfined, to a current of fresh air. An adult human being, according to Faraday, evolves daily from the lungs no less than 13½ ounces of carbon, a horse 70 ounces, and a milch cow 70 ounces. Nor are these results to be regarded as extremes, but the average results of many experiments. Carbon combines with oxygen in certain proportions to form carbonic acid. Plants absorb this gas by their leaves, fix the carbon, and set free the oxygen, or vital air, with which it has been combined; and so admirably is the balance of atmospheric composition maintained, that the amount of carbonic acid scarcely varies in any part of the world,—constituting one part in a thousand of atmospheric air. Many other impurities are rendered innocuous by an active agent called ozone, whose mysterious character and operations have only recently been unveiled; but which, as the companion of electricity, pervades all space, tendering its good offices where necessary, and making even the thunderstorm subservient to the purposes of purification.

In buildings of every description, whether for public assemblies or for private dwellings, this spontaneous ventilation is of course checked; and in extreme cases, where proper means have not been supplied for the escape of the noxious gases as they ascend, the inmates have to inhale an atmosphere rendered every moment more impure, not only by the products of respiration and combustion, but by animal effluvia of a most offensive and poisonous nature.

"An instance," says Dr. Combe, "of the noxious influence of vitiated air, which made a very strong impression on my mind, was during a three hours' service in a crowded country-church in a warm Sunday of July. The windows were all shut, and in consequence the open door was of little use in purifying the atmosphere, which was unusually contaminated, not only by the respiration and animal effluvia proceeding from so many people, but by their very abundant perspiration, excited by the heat and confinement. Few of the lower classes, either in town or country, extend their cleanliness beyond the washing of the hands and face. Hence the cutaneous exudation of such persons is characterised by a strong and nauseous smell, which, when concentrated, as it was on this occasion, becomes absolutely overpowering. Accordingly, at the conclusion of the service, there was heard one general buzz of complaint of headache, sickness, and oppression; and the reality of the suffering was amply testified by the pale and wearied appearance even of the most robust."

Who can wonder, then, at the lassitude and disease that result from continually breathing the pestiferous atmosphere of crowded or ill-ventilated apartments, or can fail to see in the squalid countenances, sunken eyes, and languid movements of those who inhabit them, the bad effects of shutting out the external air?

But as air, or any other gas, when received into the lungs, comes almost directly in contact with the blood, and does not, like an article of food, undergo any chemical preparation before it acts on the system, such impurities as may be introduced along with it are necessarily the more deleterious. For this reason, the vapour of alcohol, ether, or chloroform, when inhaled, speedily intoxicates, though a much larger quantity, taken in the liquid state, produces comparatively little effect. The breathing of carbonic-acid gas, or of sulphuretted hydrogen, causes immediate death; yet the former is the ingredient that gives to champagne and soda-water, &c. their agreeable pungency, and the latter is that which imparts to many mineral waters their characteristic medicinal properties. In our next Paper, we shall, after a few more observations on the necessity of better ventilation, introduce to the readers of the NATIONAL MAGAZINE a new and improved mode.

CORRESPONDENCE.

MY DEAR YOUNG LADIES.—My theme is "Dress,"—very important, is it not? and very practical. Quite aware am I that sages would revile my subject as contemptible, and prudes sneer at it as weak. Well, let them do so. I mean-while dare to opine that they are both wrong, very wrong; for all the philosophy in the universe cannot prevent its having its *due*, nay, I admit, too frequently its *undue*, weight. Let us therefore consider how much of our serious attention it may justly deserve, without becoming the all-engrossing subject of our lives.

Very certain it is that *Dress* acts frequently as a reflex of the mind. Thus vain frivolity, careless slovenliness, cold formality, selfish extravagance, or modest elegance, are often detected at a glance.

As a rule, dress is beautiful according to its *appropriateness*; and it is precisely in this particular that our neighbours the French have the advantage over us. A young French maiden dresses with far greater simplicity than our English girls. After marriage, the style of her dress alters; and, as age advances, the Frenchwoman so adroitly arranges her costume, that, without *assuming youth* (at all times a most unsatisfactory process), she artfully contrives to conceal the ravages of time, and, in most cases, presents a pleasing exterior.

A dress, to be *comme il faut*, should not only be adapted to the *age* and *style* of the wearer, but should also be suited to the occasion for which it is required; and should, moreover, bear some proportion to her circumstances. Extravagance in dress, and a servile imitation of the costly follies of the class immediately above, or merely *richer*, is one of the growing evils of the day. O that young ladies would believe that the greatest simplicity is not only compatible with the most exquisite refinement, but is generally the test of it! O that they could comprehend how that, in these days of hoops, gauds, and semi-masculine attire, a young lady dressed with feminine simplicity is a real refreshment to the visual organs!

As a rule, believe me, people of taste carefully eschew extremes, as nothing can be so decidedly objectionable as a *fast young lady*. Thus the pretty simple little bonnet setting round the face, though it may disclose some considerable portion of the hair, is *never* absolutely hanging at the back of the head of a well-dressed person, while the deep curtain gives a draped and graceful appearance to the whole. Artificial flowers and feathers should be used with *nice* discretion; and then only of the very best quality. Nothing is so unbecoming as overlaid finery, except, indeed, it be faded tumperry; the latter, though more obviously disgusting, is scarcely more objectionable than the other. Hats next come under discussion. They are both graceful and appropriate for young girls, to whose rounded features they are peculiarly suited. They are elegant and convenient for equestrians, comfortable for long country rambles, or seaside excursions; but that they should be adopted as a matter of taste for ladies of maturity, independently of these considerations, can, I fancy, only be lamented as "a folly of the day," for they are singularly unbecoming when the blush of youth is past.

Jackets are so multiform, some so frightfully masculine, others so graceful and convenient, that one can but urge, as a general rule, a strict avoidance of any thing fast. Depend upon it, dear young ladies, a woman to be lovely, must be also womanly.

And now we come to hoops. What can possibly be said, think you, in favour of such ugly, graceless, dangerous appendages? It must be obvious to every tasteful person, that dresses should float gracefully round the figure; certainly they should not cling to it. But can any thing be more disfiguring than the host of perambulating wine-casks,—stiff, hard, and rigid of outline,—at the extremity of which the skirts may be seen to flutter in and out with every gust of wind. O, ladies, ladies, why not at once discard these horsehair and whalebone

abominations? To wear them is to take a retrograde step in civilisation.

And now, my dear young friends, before I again bid you farewell for a time, let me urge upon you the propriety of suiting your attire to the occasion. Can any thing be more absurd than Parisian flowers, thin boots, delicate tinted gloves, and dresses of fairy texture, for the early seaside stroll, or the woodland ramble? These things, however beautiful in themselves, are inappropriate, and argue a weak and extravagant disposition; whereas a stronger and simpler dress gives one the idea of justness and real taste. I trust I have not intruded too long on your time and patience; but I feel that I have not done justice to the importance of my subject. And, however the sage may smile, and the prude may sneer, depend upon it, very much of the comfort, well-being, and happiness of your families depend upon the propriety, neatness, and modesty of your dress.

M. H. D.

FRIITILLARIA MELEAGRIS.

FIELD RAMBLES IN SPRING.

MY DISCOVERY OF THE FRIITILLARIA (*Fritillaria meleagris*).

WHEN the spring vegetation first begins to appear along the banks, cleaving its passage to the renewed light and warmth, like an array of green lances piercing the brown weeds of the last year's vegetation, then my spring rambles commence, and every sunny day brings into life new objects of interest. I know the spots where my floral friends flourish for their short bright season, and I seek them each again in their well-remembered nooks.

It is a delightful pleasure to welcome them again after their long absence, and an additional zest is seldom wanting in the accidental discovery of new treasures.

Accident or fancy sometimes leads me into new paths across fields previously deemed inaccessible, which to a botanist yield all the charming excitement of a *trug terra incognita*.

A sudden thunderstorm is not a bad incentive to discovery; when a short cut to shelter becoming the absorbing idea of the moment, by-paths are ventured upon which at other times would be rejected as unpleasant impossibilities.

A few days since, tempted by the warmth and brightness of the afternoon to take a ramble, the sky in the west became suddenly darkened, thunder rumbled in the distance, there was the ominous rustling of a sudden wind among the branches and young leaves, and forked lightning began to play on the dark clouds with threatening brilliancy. Just as I was trying to detect a short cut home a country lad passed me at full speed, and to my hurried question respecting the path I should take, pointed, without stopping, to a road through a farmyard, and then three fields (he said) would bring me into Moss Lane, which I knew. Following these directions, I had already passed the farmyard and part of the first field, totally forgetful for the moment of the interests of botany, when my attention was suddenly riveted by a broad expanse of dusky crimson which covered nearly a third of the whole meadow. Think-

ing no more of the storm, my botanical curiosity was excited, and in an instant I was in the midst of the richly tinted mass, which turned out to be a profuse growth of that somewhat uncommon native plant, the *Fritillaria meleagris*; the flowers stood as thickly as buttercups and daisies in an ordinary pasture, so that in a few moments I had gathered as many as I could carry home; and my bouquet was much improved by the addition of a white variety of the same flower which grew along with it, though not in such profusion.

This beautiful wild flower much resembles a tulip in shape; but instead of presenting the cup-like character of that glorious flower, it assumes a bell-like aspect, from its gracefully drooping character, which has obtained for it the epithet of *modest*.

The name of the genus *Fritillaria* is derived from *fritillus*, which signifies a dice-box; no doubt originally conferred in accordance with the general aspect of the flower, the markings of which consist (as may be seen in the en-

graving) of a singularly regular series of checkers (generally of two shades of a purplish-crimson).

There are twelve varieties of *Fritillaria*, all of them exotic, with the exception of *F. meleagris*. The specific name *meleagris* also refers to the peculiar markings of the flower. It is both the Greek and Latin name of the guinea-fowl, and has evidently been given to this flower from the resemblance of its markings, to the rather minute and regular speckles of the feathers of this bird. From this circumstance, it is called in many parts of England, the "guinea-hen flower;" its curiously checkered corolla has also obtained for it other equally expressive popular names, such as the "checkered daffodil," "snakeshead-lily," &c.

The delicate pencillings of the petals of this flower, suggest to me that Cowper must have had it in view, when he penned the following lines:

"Nature is but a name for an effect
Whose cause is God.
Not a flower
But shows some touch in freckle, streak, or stain
Of His unrivalled pencil."

The day after the storm, I was again on the scene of my discovery, furnished with a capacious black leather bag, and a long sharp knife, with which I succeeded in cutting through the turf round each plant to a sufficient depth to bring up the little bulb safely embedded in the rich loam in which it was growing without the slightest injury; and several well-furnished patches already decorate some of the favourite borders of my garden. Groups of this flower planted in front of shrubberies have a very pleasing appearance, and in such situations they will thrive well; for though, in their natural state, they prefer the sunny centres of open meadows, as garden flowers, they are not at all injured by the shade or drip of trees.

I look forward with pleasure to succeeding springs, when I shall see my freckled beauties which I have so carefully transplanted, appearing in due season in their new garden-home.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XV.

PAINTED BY J. C. HORSLEY, A.R.A.

LIFE AND STILL LIFE.

AU SIXIEME.

LIFE AND STILL LIFE.

AU SIXIEME.

By J. C. HORSLEY, A.R.A.

WE have in England no apt representative of the Parisian *grisette*, who, although strictly a milliner, is not, as our milliners are reported to be, of a dolorous order of sorrow-stricken creatures, grinding life and soul through the weary day, and half the night, for the wretchedest pittance that man, or rather woman, pays to a fellow being. The Parisian *grisette* is of a somewhat different class, influenced thereto by climatic and national qualities, which very much ameliorate a position such as hers; she is, in fact (or rather we are here presented with a particular example to that effect), precisely such a personage as the world suddenly became interested in on the production of Eugène Sue's famous character of Rigolette; a happy, light-hearted, pretty, pure, young damsel, living on a little and easily contented, cheerfully pursuing her avocation under much difficulty and many privations, always gay and with a bird-like heart chirping and singing, and in nothing more happy than when assisting a friend in distress.

Such is the character which Mr. Horsley presents to us: the cap-mould, upon which is a splendid head-dress, is the "still life," while she herself is the "life" of the picture. Through the window we catch a view of the roofs of the Tuileries, and thereby a hint that at least equal happiness is to be found in a flat *au sixième* as in the grandest palace in France.

The painter indicates the fair artist's pure tastes by the introduction of the bouquet of flowers, which in Paris even the poorest may purchase at the *Marché aux Fleurs* for a trifle, that would astonish a Covent-Garden dealer in the same; hence few who care for those natural luxuries need deny themselves the purest of all pleasures of the eye.

Although poor, the apartment is not desolate, because the spirit of the owner fills it with content,—the purest light. The worn table-cover and the neighbouring sleeping-place tell the whole tale of the domicile and its affairs, which we may therefore leave to the reader's discrimination. L. L.

LITTLE SELAK; OR, THE LIFE OF A RIVER.

ALL streams lead a charmed life. Their existence combines the spiritual with the material, the supernatural with the homely, the caprice of romance with the routine of every-day practical utility. They have uprooted forests, or undermined mountains, or devastated fertile plains, driving man and beast before them; and then, like Sampson, they submit tamely to grind in a mill. We learn from our forefathers the tradition of their primeval duration, we watch their ceaseless flow, we note the phenomena of a perpetual motion and a never-failing supply. They, the life-blood of the living earth, never stagnate in their arteries. Their surface may be ossified into solid ice, their superabundance may disappear in shapeless and invisible vapour; still on they glide continuously without the slightest temporary check to their actual progress towards their final goal, the ocean,—at once their mother and their grave, whence they rise anew in never-ending resurrection. In a spirit of contrariety, they both serve man, when they are good servants, and they rebelliously defy him, when they are bad masters, shaking off at their will his bridges of boats, his dikes, and his dams, as easily as the wild horse snaps a halter of rotten tow. All streams, I repeat, are things to marvel at, without considering what an extraordinary form of matter is water itself; they are wonders universally, from Amazon with her thousand tributaries, from La Plata with her colossal gulf-like mouth, from Rhine with his hurrying mass of waters pushed forward by pressure from his icy springs,—to the merest brooklet, the tiniest burnie, that wells from a hill-side or leaps down a rock.

Leaving to others the giant rivers which majestically sweep across whole continents, I will follow out a recreative course, lately begun, of the study of Nature's minutiae by playing awhile with one of the smallest of streams,—a little Tom-Thumb river, a watercourse you might examine with a pocket magnifier,—who has often fascinated me with his pleasant and sprightly wayside companionship. In fact, he is a sprite, a water-goblin, of more importance than you would fancy to look at him, and in despising whom you will make a great mistake. His name is, sometimes, Slack. M. Thiers, in his *History of the Consulate and the Empire*, more grandly styles him Selaquo. Before Monsieur Thiers was born or thought of, he was written Selak by learned clerks. In familiar brotherhood, I shall therefore call him Little Selak. Do you find him in your gazetteer? What is Little Selak? And where? I will give you a clue to his local identity.

A pair of lovers, wandering in the north of France by the side of a narrow rippling stream, christened the, to them, enchanted spot La Vallée Heureuse in the overflowing happiness of their amorous hearts. But a title given to a place under such rose-coloured circumstances cannot be received as definitely fixing its intrinsic merits; for many and many a gloomy dell, if we have but those we love beside us, becomes the abode of cheerfulness and joy. La Vallée Heureuse is not adorned with those gorgeous and luxuriant scenic details which make the fortune of fictitious vales. No birds of brilliant plumage glance through the perfumed air; no ripe ungathered fruits drop untasted to the ground; no flowers of exotic fragrance arise under the beams of a never-clouded sun. The atmosphere is not of that balmy temperature which renders unnecessary any dwelling of more solid structure than a jessamine bower. Neither the Prince of Abyssinia, nor the much more business-like Sinbad the Sailor, would mistake our valley for any of those romantic dales which had been the subject of their contemplation. Still it is a happy valley, and the reason why is very remarkable. In compensation for the absence of many other charms, the Happy Valley is a busy valley, Little Selak being the busiest of all. But who made the valley, and who made it so busy? Little Selak did both, say I. We will allow geological theorists to decide in other cases whether it is the streamlet that makes the valley, or the valley which attracts the streamlet; but we generally find those elements of landscape in the shape of inseparable and bosom-friends. I have been on intimate terms with two or three eccentric valleys which had streamlets running under instead of through them. But here, I obstinately assert, Little Selak courts the valley because he delights in his own handiwork.

In infancy Selak was cradled on high table-land, where he sucked in the dew like mother's-milk, and was rocked by winds from every quarter. His lullabies were, now the deep-toned chorus of the waves of the sea, now the mutterings of the wintry forest. His childhood was overawed by superstitious tyranny, vestiges of which still remain. Yonder, to the right, on a grassy hillock, a few gray lumps of rock are visible. Look at them again, and they fix your attention by that fearfully old, time-worn, hoary look which belongs to no other than Druidical remains. Approach them, walk amongst them, around them, and over them. You will see some sixty or seventy stones, indicating obscurely an original arrangement in concentric circles, and lying upon what seems an artificial mound of slight elevation; but as to object, architecture, or epoch, they refuse all answer to your most urgent questions. You may as well entreat a dead man's skeleton to give you the history of the living individual. They are not, like most other Druid monuments, blocks of solid granite, but mere lumps of coarse soft marble of the neighbouring quarries. The winds have so rasped them, the rains have so melted them, and the frosts and snows have so severely bitten them, that even their outward form cannot now be depended on. What horrors little Selak witnessed amongst them during their days of power

he cautiously abstains from revealing now; but Druidical tales of terror have since been succeeded by the unhealthy growth from a more merciful faith. Inquire their history of the peasants of the place, and all difficulties vanish at once, all doubts are immediately solved. This mysterious cluster of stones is called the "Noces," or the Wedding-Party. One day, during the dark ages, monsieur the curé happened to be carrying "the Bon Dieu," or the sacramental wafer, to a sick man who lay at the point of death. On his way he passed this wedding-party, who irreverently continued their fiddling, dancing, and merriment, instead of falling down on their knees as they were bound to do in the sacred presence of the host. As a proper punishment for their impiety, they were instantly changed into so many stones. Although the fact is acknowledged to have occurred long before the oldest inhabitant came into the world, it still remains incontrovertible; for, if you break a piece from off any of these petrified holiday-makers, you will find that he or she retains internally the colour of flesh, and even a slight odour of the same. Nobody dwelling in the nearest village—Landrethun—seems to be aware of the effect produced by blows or friction on ordinary pebbles of quartz which have never been suspected to be of human origin.

Little Selak winks his blue eye wickedly when he listens to such traditions told by elderly crones. Here he still is a laughing youngster. I frolic with him, I jump over him, I bestride him triumphantly, and take up samples of his quality in the hollow of my hand. With a full-sized bucket I could almost throw him out of his bed. That, however, would be unkind treatment; for he most good-naturedly shows me his playthings and the pretty live pets which delight his early days. He gives me a little tuft of water-moss or conferva, telling me to look at it with my clear-sighted Amadio microscope; and then I behold bundles of crystal rods beautifully decorated inside with spiral and interlacing fillets of green. And then, up and down the rods there run living creatures, transparent as glass, searching for their prey, whatever that may be. I look again and again at the magic drops which Selak lets me take at will; and the more I look, the more I wonder at the riches of his miniature menagerie. But while I am staring with all my eyes at the palpitating hearts of cyclop water-fleas, and the fragile shells of cyprides, the largest no bigger than a mustard-seed, sly Selak has stolen away. He is bent on mischief; he is up to his old trick of staining linen with rusty spots. On one occasion he maliciously spoilt a housewife's whole wash which she had spread out to bleach upon the stones. She showed it to her learned friends, who pronounced the presence of iron-moulds—and of iron itself! Search was made for the culprit metal, who is not entirely unearthed to this very day; a strict investigation into the facts continues still. That was not all. Selak tossed out upon the roads a heap of rusty-looking stones to mend them with, of whose properties he himself had a slight suspicion. After Bonaparte's wars, in time of peace, he set some idle Frenchmen to work who could just then be spared from throat-cutting and cannon-firing, and the result was, that he converted these stones also into iron. Cunning Selak has furnished his tutors and guardians with plenty of troublesome work to do.

Another day, after a heavy tempest, he got into a passion at the thorough drenching it gave him. He was wet to the marrow; so he vented his rage, like a hot-tempered child, on the walls of his bedroom. He struggled against them, he foamed at the mouth, he threw great stones at them, and pushed with all his might, till he laid bare the commencement of a marble-quarry. You have heard of the famous French paved roads, so useful across alluvial plains, where not a pebble is to be had. Well, Little Selak has thrown those *pavés* broadcast far and wide over districts where his name was never heard. Selak has thus presented to his countrymen innumerable churches, town-halls, bridges, châteaux, trottoirs, tombstones, and even stone drinking-troughs for cattle,—all dug out from treasured stores which he was

the first to bring to light. If Selak made the valley, has he not also made it a busy one?

Generally, man takes a great deal of pains to show what changes he and his tools can work in the primitive appearance of his native planet. Hereabouts, on scattered spots within the range of vision, the earth seems to have been turned inside out. Countless tumuli stud the landscape, as if thrown up in hasty desperation to cover the slain in some wide-spread battle. Hillocks, mounds, deep hollows, and irregular rampart-like banks, some in naked barrenness, others slightly sprinkled over with stunted plants and thread-bare shabby grass, are the result of numberless diggings made and making for the erection and embellishment of populous cities, which almost owe their material existence to the contributions vouchsafed to them out of Selak's domain. Mark, too, those three separate sets of men, who, sheltered from the wind by three screens of straw, are inserting long-shanked corkscrews into the ground. They are boring to ascertain whether iron-ore is to be found beneath their feet or not. Further on is a deserted quarry (because better ones have been found elsewhere), with a pool of limpid water at the bottom, which common report has peopled with eels. Iron and stone are surely helps to prosperity. Little Selak takes us by the hand, and we soon reach a spot where his *protégés* are really doing business. We have pile after pile of ochry-yellow ore, which gangs of men are breaking up into convenient bits for carting away; we have hole after hole, which, by windlass, rope, and stout wicker-basket, are emptied first of earth and rubbish, and then of ferruginous treasure. All this happy healthy employment has arisen from the freaks of a capricious little brooklet. Admire the neat tiled roofs of those new-built cottages; they are part of the growth of Selak's Happy Valley. Even we wanderers reap the benefit; for step into this wayside cottage, largely patronised by the miners and their friends, and taste what a capital slice of bread-and-butter and what a fresh pint of cool brown-beer they will give you, in what would otherwise be an empty desert; or, if you prefer the country-fashion, try a cup of their black, strong, smoking coffee, qualified by two-sous-worth of brandy.

Little Selak dances along to keep pace with our invigorated steps; and after a pace or two onwards, he suddenly shows us a scene of real beauty. We must come before long with our photographic apparatus, and carry away a series of stereoscopic pictures. There is a deep dell, in which Selak plays at hide-and-seek, winding through a wilderness of rocks and verdure. There is a large irregular country-house, the Château de Haut-Barreau, commanding a green slope that rises from the valley. There is a wild, tangled, natural pleasure-ground, composed of ivy-clad stone and tender hazel-twigs. There are bold perpendicular cliffs of naked rock, at the bottom of which innumerable men and boys, all Happy-Valleyers, are employed about work which never fails them. There are blasters cruelly boring the stone, to blow it up with gunpowder as it quietly reposes in its native bed; there are masons chipping away at the rocks already detached, and fashioning them into steps, key-stones, corner-stones, arches, and the thousand-and-one forms which builders require. Note the very comfortable seat they use,—a one-legged stool, strapped behind them, looking as if they had once sat upon an enormous mushroom with a top so glutinous that it stuck to them ever after. It most conveniently allows them to turn whichever way their work requires; and gives a hint worth the serious consideration of those energetic pianists whose skips and arpeggios have reached the limits of possibility. Pleasant parties of busy stone-cutters are seated in sunny nooks, chatting as they shape the approximately cubical pavements which are destined to travel by cart, barge, canal, and rail, far far away from home. There are but few sea-ports, inland towns, docks, locks, and roads in the north of France which have not to thank Selak's Haut-Banc quarries for some important tribute to their construction. We judge of a workman by the quantity of his chips; you may

guess the amount of Haut-Banc stone sent away by the mountains of rubbish left behind. How beautiful, too, is the colouring of the scene! Eyes which can appreciate the harmonious meltings into each other of grays, yellows, browns, and greens, will here enjoy a chromatic feast not easily matched. Ruddy tints intermingling with cold ones are scattered with a boldness which few artists could conceive beforehand. Observe that bright mass of pendent vegetation, with the hawthorn growing out of the face of the rock. If I were a bird of the Happy Valley, I would go and build my nest in that very bush.

Little Selak leaves us for an instant to whisk round a jutting promontory, and a rosy young stone-chipper, seeing we are strangers, advances to do the honours of his quarry. With a piece of cloth, which he holds in his hand, he first wipes our shoes, and then laughs in our faces; the plain French of which, interpreted, is, "If you offer me a half-franc to drink your health, or even a whole one, I cannot be so rude as to refuse it." We do not mind paying a small silver-coin in return for a good-natured and civil reception; and so, young gentleman, take that for your pains. Do you also try to be a tip-top workman, and to earn your three or four francs a-day.

Here we might take to the high-road which winds to the left round that thicket of hawthorn, and so leads you out of the Haut-Banc quarry; but Selak still beckons us to descend the valley by a path to the right which our shoe-wiping friend has indicated. But diligences, carioles, and cabriolets, are useless alike in following the freaks of our water-sprite. You must descend from your carriage, whether chariot or cart, and trust to your own private ten-too conveyance. You cannot even ride through the glen, unless, with Taffy the Welshman of nursery-fame, you are in the habit of excursioning astride on goat-back. Along the grand imperial road you see nothing of the Happy Valley; you do not even suspect its existence. It lies modestly retired, like Eve, who *would* be wooed, and conscious of her worth. A great point of resemblance which exists between the haunts of Little Selak and the Johnsonian retreat of Rasselas is, that both are effectually secluded from the world; the one by ramparts of unscalable rock, the other by the all-powerful force of habit: it simply lies out of the beaten track, and men are accustomed to follow the old one. O ye sheep-like highway travellers, who never dare to set your foot in a place unless some bell-wether tourist has gone there before you, how little do ye know of the rapture of the bold adventurer whose courage has put him in full possession of the unhackneyed charms of some virgin-spot!

After a dozen steps, we are silent with admiration. There is a whole month's work for the most untiring sketcher only to skim the cream of the scenery. More mountains of purple-tinted rubbish; more gray buttresses of ivy-clad stone; a deep narrow dell, flooded with sunshine, and secure from the winds that rage overhead; cottages nestling against grassy slopes, on which cows are grazing at giddy heights; and the brawling Selak gambolling at the bottom, with nothing but a few stepping-stones to thwart his current. The very air is saturated with quiet and peace. It is almost a relief to the sleepiness of the picture to watch that mischievous goat as she breaks loose from her tether, and then climbs to the roof of the cottage to browse on the ivy which so luxuriously covers it. It is a wholesome recal to worldly feelings to find a tobacco-shop established in the Happy Valley's heart. We are delighted, too, to notice the "Tivoli" of the dale, where at all times footsore and fainting folk may be resuscitated as far as wine, beer, and brandy, will do it; and where ladies and gentlemen on state occasions may exercise those pleasurable muscles which are brought into play by the act of dancing. And the rolling smoke, which we now and then catch sight of from the distant chimney of Pinart's foundry, tells us that hundreds of men earn good and steady wages there; and, above all, that the Happy Valley is a vale, not of dreams, but of realities.

Dance along, unthinking Selak; you will soon be made

to do a little work. Dams and reservoirs collect your waters, and compel you to turn three several marble saw-mills. You are pitched headlong upon an overshot wheel, and you thereby set in slow motion, backwards and forwards, four clumsy wooden frames, each furnished with twenty saw-blades. The blades have no teeth, and look as blunt as iron can be; but by the aid of sand, and the lading-on of water, you contrive to cut at once eighty slices of marble which are not thicker than some bread-and-butter I have seen in my early days. These serve for in-door pavements; on others, a man may get his epitaph inscribed, or build himself a chimney-piece to warm his toes at. Stouter slabs, cut by a single blade, will serve as foot-bridges to cross Selak's own stream, or as blocks wherewith to stem its course.

Our pigmy rivulet has his tributaries, too, who all add to the general welfare of the Selakite vale. Little as he is, his minor sisters pour each their respective share into the fraternal lap. They are mere tiny threads of water which rapidly escape from beneath your footsteps, to hide themselves behind a hedge, or creep under the shadows of the long grass and rushes, seeming almost to apologise for their insignificant aspect; and yet their dowry is far from despicable. Coal, for instance, is a comfort to chilblained children, and convenient in the capital cooking-stoves that are here called *cuisinières*, or *woman-cooks*. Now one of Selak's little sisters has a respectable store of bright black-looking lumps closely covered up under her basin. The Valleyers for a long time past have already obtained a small supply, which might doubtless be greatly increased in quantity, if the mines were but worked with greater skill than you sometimes see employed by elderly females in their excavations with a fire-shovel in a gravel-pit. If a council of stern fanatic inquisitors would but put the Selak sisterhood to the question,—to torture by wedges, pulleys, and screws, to exhaustion by pumps, and scaldings by steam,—it seems scarcely possible that they should keep much longer the secrets relating to their hidden funds.

One valued item of liquid treasure furnished by an infant member of the family is open to all who choose to use it. Not far from a village called Retz, and enshrined beneath a marble-altar and embosomed in a wood, there rises a miraculous and medicinal spring, in the miniature chapel of Saint-Godeleine. To doubt its efficacy in the Happy Valley, is to expose yourself, not to martyrdom, but to the certainty of being taken for a very great fool. The medical men roundabouts mostly give the saint fair play. "In obstinate cases of fever," says a learned M.D., "I send my patients to Saint-Godeleine's spring. I tell them to make their vows and pay their devotions, and then to drink off a tumbler of water with the addition of a draught which I give them before they start on their pilgrimage."

Take, then, the good the gods provide thee. Saint-Godeleine's well flows beside thee. Taste the unsophisticated liquid; it is simply nasty, with none of the piquancy of most chalybeate waters. Saint-Godeleine, as every body doesn't know, was an ill-used lady of the tenth century, who spun in private to maintain the poor. Her husband brutally caused her death; but she first struck her distaff into the ground in a little wood close to her residence, and out there spurted a spring of water, which has been antifebrilely-virtuous ever since. Her effigy (about ten or twelve inches high) occupies a little chapel which was last reconstructed in 1829. The building is thickly overshadowed by beech-trees; but a little turret, with a tuft of green poly-pody growing upon it like a vegetable plume, is the handsomest external feature it possesses. The interior contents seem, to English eyes, more fitted for the era of Saint-Godeleine's existence on earth, the infancy of human belief, than for the daring doubters of the nineteenth century. The door, left constantly open, shows confidence in the faith and good behaviour of pilgrims and visitors; and also a philanthropic liberality in allowing such a healing fountain to be accessible to all comers, instead of selling the mixture,

sealed and stamped, in bottles at prices varying from three and sixpence to a guinea.

Enter; immediately before you is an altar of brown oolite marble, very like a small chimney-piece, having a semicircular hole at the bottom where the ashes fall into the fender. In this hole rises the water which (with faith) cures the drinker. The little brooklet, as it oozes away outside the chapel, is nothing but the scantiest fillet of water. If votaries were to multiply greatly, they would soon imbibe it faster than it flows. *Nota bene*, the trees that overhang and surround the shrine are bound round and twisted with countless scraps of cloth, ribbon, lace, and even garters. Their arms and branches are bound in this way by ailing suppliants, *in order to bind the fever there!* The unfortunate clump of beech-trees is, in point of fact, the wooden scapegoat of the Happy Valley whereon outlying invalids come to lay their fevers,—the recipient of the maladies of all who visit it. Do you remark, however, that the health of any individual shrub seems to be much the worse for the transfer? although universal testimony states that the patients are cured infallibly.

The saint herself is a dwarf image of indefinite form and feature. Her altar is garnished by curious votive offerings, some of which are beyond my comprehension, especially as they are mostly valueless. They must be intended rather as a complimentary acknowledgment than as any payment for services received. For instance, our Lady of Loretto,—and many other ladies besides,—would feel herself insulted were any devotee to approach her shrine with a present of codfish-sculls or cuttle-fish bones. Besides these, there are little framed prints, crosses of stick, a crutch, walking-sticks, and scraps and shreds, 'to bind the fever,' within doors as well as without the chapel. All are fast mouldering away with damp, the funds of the temple being far from prosperous. Saint-Godeleine's last new cap, gown, and veil, presented to her as the honorarium for the temporary cure of an ailing little girl, are now completely rotted and gone.

The fortunes of streams, like the fortunes of men, are liable to have their ups and downs. Sober Selak, after quitting the Happy Valley, has still a valley to call his own; but it has not always been a happy one. Between him and the sea lies an extraordinary tract called the *garenne*, or the warren, composed entirely of shifting hills of sand. It is so extensive in area and so unlevel in surface, that to traverse it is no easy task. "Take care you don't lose yourself," said a sportsman one day, when he saw me entering this isolated wilderness. "Never fear," said I; "I am sure of my direction." I did lose myself nevertheless, and only found myself again by following the sun, soon to set in the west, which I knew would lead me down to the sea. A night-walk across it would be rather perplexing. I can quite conceive a party of young children strayed there in broad daylight, and perishing of fatigue if no one went to look them up. The *garenne* has a vegetation peculiar to itself; the most valuable species being the marram grass, which is planted and protected by the local powers. It has also a fauna of its own, which might form the subject of a nice little natural-history book. There are rabbits in plenty; a variety of curious and beautiful snails; there is also a toad which I never saw in England. It burrows in the sand; and as you climb up a hill, it peeps out of its hole, and stares at you with a sort of "Pray, what's your business in my warren, sir?" The sands blown from this arid desert have often choked up the mouth of poor little Selak; stopping his circulation, and driving him backwards to flood the meadows and spread ague and fever throughout the country. The stream—once so merry, but now fallen into trouble—is assisted to make his escape into the sea by means of tapping him for the dropsy in his latter days. A long straight cut and a sluice-gate help him to hobble and limp along as far as an abomination of desolation called Ambletuse.

So good-by to little elderly Selak, who calmly prepares to take his departure; but at the point of embouchure, which is his watery grave, he entertains us with a farewell display

of a species of agriculture which has been proverbial from the days of Virgil downwards as emblematic of "labour in vain." It is not the attempt to wash a blackamoor white. Let us follow the rivulet to the very last, as he lies spread out flat upon the beach. It is low-water, and we are at the epoch of spring-tides, namely, a day or two after the full or new moon. You see the strand is covered with furrows; and as we advance to the water's edge, we catch half-a-dozen men and women in the profitable fact of ploughing the sandy shore. Look at that bright-eyed young lass, with her golden drop-earrings and her neat-fitting cap, her legs encased in dark woollen stockings and her feet sensibly shod with wooden shoes. Her petticoats are prudently short; a small canvas-bag is slung over her apron. Her hands grasp a garden-tool, which in England would be called a hoe, and in ordinary French is known as a *brague*, but here is designated a *charrue*, or plough. With this firmly pressed on the level sand, she walks steadily backwards, ploughing the surface. As the wind and tide happen to be to-day, her labour will not be so unproductive as you imagine, and the crop will be gathered more rapidly than if it were forced by the best-advertised patent manures in existence. I will tell you in confidence that that robust good-natured looking girl is searching in this barren soil for the daintiest dish which has ever appeared on Little Selak's breakfast-table. We approach; the plough moves steadily on. After a yard's length or more of furrow, her red right hand darts at her writhing prey. She has caught it! It is a delicate silvery fish. On with the plough; more quick-writhing victims are upturned; the canvas-bag bears a respectable burden. You wish to help her, do you, and to save her the trouble of picking up her game? Be quick, then, in your motions, or you'll be sure to catch a blank. There! The fish is gone; you have lost it. Where is it? Deep in the sand by this time. No mole can burrow so rapidly and effectually. And there is another; you have contrived to secure *that* before it has interred itself. And no wonder either! Its head—see!—is amputated by the plough. These "beasts" (as the French call every living creature) lie in the sand with their heads uppermost and their tails downwards. Like Ben Jonson in Westminster Abbey, they prefer to be buried in a perpendicular position. Hence the number which are decapitated in the process of catching them, without, however, thereby losing their liveliness. Hold, maiden, enough! The bag is half-full. There are already more than we can eat at a meal. You will continue, nevertheless, to plough for *hamiques*, or sand-eels, as they will be welcome bait to the fishermen. Be it so; we will linger to see the last of Little Selak, while our sea-side Ceres gathers in her harvest, and is amusing herself to her heart's content by reaping where she has not sown.

E. S. DIXON.

ROYAL ACADEMY EXHIBITION.

THE EIGHTY-NINTH.

[Third Notice.]

SIR E. LANDSEER maintains his noble reputation this year by three pictures: No. 77, "Scene at Brae Mar—Highland deer, &c.," a large picture, whose qualities it is superfluous to praise, representing a magnificent stag standing with others backed by mist, on the brow of a hill, looking grand defiance to the hunter. No. 93, "Rough and Ready," a portrait of a favourite mare, in a stable yard. The humour of the picture is, that a fussy hen, who has just laid an egg, calls attention to the important fact by loud cackling; the mare looks at the marvellous production rather askance, scarcely seeming to think its importance requires such loud announcement. The expression of both animals is admirable. More striking, but not more excellent, are the expressions of a bull-dog and his wife, who, under the title of "Uncle Tom and his Wife, for sale," No. 845, attract universal attention and admiration. Chained together against a wall, the hapless canine pair await a purchaser; the tearful dolour with which the lady

looks at her better half is most pitifully comic. A very significant 'cow-hide' hangs near.

Mr. Ansdell appears in great force with "Ploughing—Sevilla," No. 597, a Spanish peasant ploughing with the clumsiest of implements, and in the laziest of ways. We think never were oxen better painted than are the two great creatures who sullenly drag the plough through the stiff land. There is something grand in the sober and steady way of their doing this, and in the rich powerful colour the whole picture has. The latter quality is most remarkable in all this artist's works now here, particularly in "Mules drinking," No. 856, a group of mules in their Spanish trappings, which is very expressive and characteristic. "The Water-carrier—Sevilla," No. 534, is a worthy companion to those works.

Mr. Stanfield's works are always remarkable for the scientific truth with which he draws the sea, either when in motion or at rest. His great waves hurl and cast themselves with strong force in "Port na Spania," No. 204, the scene of the destruction of part of the Spanish Armada, which he has localised most effectively by introducing the incident. In No. 308, "Calais Fishermen taking in their Nets—Squall coming on," the crew of *La Bien* of Calais, with that praiseworthy caution which distinguishes them, hastily secure their property, and another hour will see the lumbering craft, sails still on the mast, bumping the lee-wall of the basin before Hogarth's Gate. In this picture the water runs in great swelling rolls, characteristic of the turbulent rather than violent Straits of Dover. In No. 61, "Fort Socoa, St. Jean de Luz," the water breaks sharply on the beach, and is as perfect in form as before. No. 371 is named "Salerno," where the Mediterranean lies calm and blue. Mr. Stanfield's knowledge of sky-effect is only surpassed by that he possesses of water-forms. In each of these pictures is a different atmospheric phase: they would be absolutely perfect did they contain more colour, in a general sense, and more variety of the same in each example. In No. 204, a piece of verdure on the slope of the basaltic cliffs is really not green enough; and in No. 571 there is deficiency of colour, considering the climatic difference between the Irish coast and that of Italy. Almost equally true in form, and much more various in colour, are Mr. E. W. Cooke's pictures; his system of wave-painting is especially remarkable: their reflections, their dead colours, and their changeful transparencies, show how deeply he studies their characteristics. If the reader will refer to No. 442, "Morning, after a heavy Gale," he will see precisely what is commented upon by noticing how the water, in any of those great wave-troughs, has numerous reflections from the sky, other parts of the sea, and objects within range. This, too, is a method, not only of infinite value in getting variety of colour, but in most truthfully representing form. A more impressive picture than this is seldom seen: it is just after daybreak, and a great storm has wrecked an Indiaman of heavy burden on the north sand-head of the Goodwin; signal-guns from the beacon-vessel call a life-boat and pilot-sloop to assist; they bear up, and are receiving information from the crew of the beacon, which, steadfast in all this trouble, faces the waves, with spare anchors and sand-spoons at bow, and on her side the word "Goodwin," which looks ghastly in the morning light that the waves, churned white in the direful night, reflect with a strange pallor under the dun and lurid sky. No. 28, "A Crab and Lobster Shore," is one of those peculiar phases of nature which are rarely painted, showing a part of chalky coast, with rough disintegrated boulders and flint-stones upon the shore. This picture, although lacking variety of colour, is extremely interesting.

Mr. Creswick's pictures, although sometimes a little monotonous, are always interesting and beautiful. His (No. 219) "Autumn Morning—when brook and river meet," is one of the freshest and most delightful of these. Over a little hill, on a river-bank, a horseman rides after his cattle; his figure catches the clear rays of light, and is surrounded by the brightness of the dawn like a halo. The scant-leaved

and autumn-tinted trees, hang over the still waters to be perfectly reflected, and, Narcissus-like, see day by day their glory swept away, as the calm river carries off leaf after leaf. No. 294, "Parted Streams," is equally pleasing, with its effect of mellowed light, and trees mingling their gray and brown and green in one harmonious whole. No. 54, "A Salmon-leap," is almost as excellent as either of these.

Mr. Redgrave exhibits four pictures: No. 62, "The well-known Footstep,"—a cottage-gate, up the path to which a soldier approaches,—is bright and cheerful in colour, touching in sentiment, and forms altogether a charming work. No. 189, "The Cradle of the River,"—a spring rising still and silent in a wood,—although a little over-green, is pleasant and true. The picture by this artist which pleases us most is "The Harvest-field," No. 514, a delightful and genuine study. Mr. W. Linton's picture, No. 572, "Derwentwater," is excellent, as his works always are; the best we have seen for some years.

Mr. D. Roberts, R.A., has three pictures,—No. 41, "Interior of the Duomo, Milan;" No. 88, "The Piazza Navona, Rome;" and No. 418, "Interior of the Church of St. Gommaire, Lierre, Brabant,"—of which the first is an effective and impressive work, more than usually elaborate, and powerfully coloured. He does not affect in any of his paintings to give absolute individuality of detail and colour in the scene chosen, but contents himself with a generalisation of effect in monotone; a practice to be regretted, we think, because much of the true character of the building must be lost by such a procedure.

Mr. Faed's picture, No. 264, "The First Break in the Family," has, it is easy to perceive, numerous admirers; and whatever faults might be found with it, as regards solidity of style and truthfulness of light and shade, there is no doubt that it suggests a touching story, which is also touchingly told. Although a little black in colour, Mr. G. B. O'Neill's "Last Day of the Sale," No. 541, has much spirit, expression, and variety of character. Mr. H. O'Neill's "Pic-nic," No. 344, hardly does justice to the painter of the "Wanderer's Return," a truly admirable picture. Mr. C. Lucy's picture, No. 16, "Burial of Charles the First," is more than usually interesting and vigorous. His admirable drawing and solid qualities of design and painting are perfectly shown here. We recommend it to the reader's careful examination, as full of expression and truth. No. 601, by P. H. Calderon, "Broken Vows," has some excellent qualities, which further practice may develop into much artistic power. A maiden stands with her back to the wall, against which she is convulsively supporting herself, while she checks all outward manifestation of her anguish at the sudden discovery she has made, in overhearing from the other side of the wall the treachery and faithlessness of her lover. The forms of the latter and the lady he is addressing are just seen through a break in the top of the fence.

L. L.

REMARKS ON THE "MEMORIALS, SCIENTIFIC AND LITERARY, OF ANDREW CROSSE THE ELECTRICIAN."

By WALTER SAVAGE LANDOR.

Men of science are seldom poets, and not always philosophers, in the more extended sense of the word.

Andrew Crosse, of whom these *Memorials* have recently been edited by his widow, together with large contributions from his letters, important notices and explanations of his experiments, his unreserved opinions on politics, morals, and religion, was also a poet of wide range of thought and great vigour of expression. The volume, which contains evidence of this, will be consulted by all the philosophers of the age, and by such of the poets and their readers as can be induced to believe that there may be something more and better in poetry than the strange and the fantastic.

The early life of Andrew Crosse is described by his

learned, scientific, and eloquent widow: "In early life," says she, most truly and philosophically, "time, place, and circumstance contribute to form the future destiny. Imagination is the great architect of character; and to the impressions of infancy can be traced the tendencies of after-life. A birthplace is more than a name. It environs our childhood, and often serves to develop a poetic temperament, and a love of the beauties of nature, which otherwise might have lain dormant."

The birthplace of Crosse is then described.

"The undulating grounds are tossed together as if by some freak of nature, and the house itself is shadowed by lofty trees, through whose branches the winds never cease their sad music. The gigantic limbs and knarled roots of the old beeches in the avenue strike one with admiration and with melancholy. The still vigorous trees, the growth of centuries, seem to mock at the short life of man; succeeding generations walk beneath the same shadow, and the narrow vault near by receives them successively, and their place knows them no more but as name-links in the old pedigree. Yet who is there can live within the walls where his forefathers have dwelt without feeling in some sort more than commonly united with the past?"

He had long held liberal opinions, and professed himself a republican in principle, though he had been high-sheriff of Somerset. His views of the political changes of the day rendered him excessively unpopular.

All violent antagonism of principles gives birth to a new order of things; what is good in it comes not to the age which suffers, but is developed in the maturity of the future. The time of our birth is never without its influence.

There is a curious anecdote of Crosse in p. 22, showing how early he began his experiments. This was at the school in Bristol.

The wise biographer of her husband makes this observation in p. 26: "It appears that all great minds peculiarly feel the shortness of human life; it is not the fear of death, but they are oppressed with the sense that time—that no time—is enough for them."

In p. 28 is a most interesting letter from Mr. Broderip, dated 20th of February 1857. It shows the early bent of Crosse to electricity, and his generous and manly character; it was in the last century. Speaking of Oxford in the year 1802, and the habitual drunkenness of the student, he says: "Most likely he falls in with ill-advisers; and no one feels any shame but the false shame of doing right." "A shadow was on his house," says his widow; "his mother was lying ill. The bells of the village-church rang out a merry peal to celebrate his majority; but he indignantly stopped them, and passionately asked how they dared to ring when his mother was ill. 'What,' said she, 'shall I not hear the bells rung for the coming-of-age of my eldest son?'"

He was like the discoverer of a mine of precious stones; he knew the value and properties of the rough-looking mineral which he brought to light, but he left to others the duty of polishing and setting the rare gem in the regalia of science, or applying it to the purposes of utility. We must accept each man as he is. One mind may be fitted for analysis, another for synthesis, another, without an atom of originality, may ably generalise a confusion of facts; all do good service. In p. 44 are some twelve good verses, "Silence and sleep" down to "creeps slowly on." In p. 58 are some fine reflections on Greece and Italy, on Rome and Venice. He was fond of animals, as every good man is, and many who otherwise are not good. "I think," says he, "I could tame every animal in creation, except my own species." Added, are some beautiful lines on a red deer, turned out before the stag-hounds on Bloomfield Hill; and others yet more beautiful on "My Dog." His poetry is not always elaborate. It was his opinion that elaboration is injurious to poetry; this is among the few opinions in which he is erroneous. Elaboration is only injurious to what is unworthy of it. *Labor improbus* makes bad worse. In p. 96

is a sentence worthy of Bacon or Milton. "Is there one man, however poor, however abject, crawling on the face of God's earth from whom we ought seriously to shut it out? to keep him in ignorance of the glories by which he is surrounded, and of the capacity for enlarging them? to prevent him from digging for that treasure which he has a right to possess in common with his kind? to chain his intellect, but set free his limbs? to allow a being endowed with superior intelligence to veil his best faculties in sleep, or, if awakened, to be used only for the furtherance of mischievous propensities?" There are many other sentences as philanthropic as this. "*You have immense influence in the county,*" said a brother magistrate. "I despise all influence," said Mr. Crosse. "I don't think I possess any; and, if I did, I would not exert it. I only desire the good of my fellow-creatures."

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

To us who look on the political machine from the outside, more than one significant change in its working is apparent. Of these, none is more obvious than the rapid decline of party,—the extending fusion of principles and classes. With very few exceptions, it is difficult to point out any essential variance between the mottoes adopted by Lord PALMERSTON and those which are inscribed upon the banners of Lord DERBY and Lord JOHN RUSSELL. Gradual Progress is the watchword of all three; and although more or less latitude of construction may be given to the principle, according to the bias of each leader, we do not believe that under the auspices of any of them there would be any striking difference in the results of legislation.

The fact seems to be, that when the broad principles of civil and religious freedom are once secured, they engender a force which bears away on its current all sections of intelligent men, and that the function of parliament must eventually consist, not in discussing those principles, but in administering them. It is our national faith in the security of progress, not our indifference to it, that produces the political calm now every where visible. Hence the difficulty of getting up a cry. There is no eddy in the tide, because it encounters no rock. Men do not plant cannon against the fortress which yields to their flag.

In this country, we apprehend, the office of parliaments will become more and more confined to questions of pure administration. Principles being universally granted, that they should take effect is a "foregone conclusion."

But it becomes of the highest importance to remember, that the fact of general consent as to principles of government imposes new duties upon man socially and individually. Institutions are, after all, only the scaffolding by which the edifice of social life is to be reared. The scaffolding being tolerably adjusted, the question then comes, What of the building?

If, in a word, we enjoy settled liberty of thought and person, and an ever-extending power in the management of affairs, how are those benefits to be applied to our social and individual condition? Is the new generation, for instance, to be educated for its growing responsibilities? and, if so, what class of educator do we need? Are we to be for ever content with the mere professor of dry facts, the repertory of tables and statistics, and never to claim that better genius, which not only supplies facts, but evolves faculties, which, while presenting objects to the memory, draws forth the reason that can apply them and the conscience that hallows the reason—the instructor who leads out—educates—the man?

CHILDREN. BY A. MUNRO.

The standard of the professed educator must no doubt be raised. In a yet wider sense, the divine, the poet, the philosopher, the novelist, the artist, are educators of the people. At a time when politicians have well-nigh accomplished their work as founders of institutions for man, those intelligences who are the trainers of man himself demand, and must find, more earnest attention and recognition. We do not hesitate to say, that more of that which goes directly to the elevation and to the happiness of human character, to the development of human sympathy, courage, and independence, is to be found in the poems of TENNYSON, LONGFELLOW, and others, and in the writings of such men as DICKENS, BULWER, and THACKERAY, than in all that has been effected by legislation during the period of their labours. Nay, some of the best tendencies of legislation itself have been unconsciously derived from the influence of contemporary literature.

Doubtless, were his functions fully realised, the highest educator of all would be the divine.

Not long since we expressed our regret, that out of many spiritual teachers whose piety and earnestness could not be questioned, there were so few who appeared to connect religion with our daily interests and vocations. We urged that Christianity had its bearing in the widest sense on the life that now is, as well as on that which is to come; that the devoteism which divides the sanctity of faith from our general faculties and pursuits is not the healthiest phase of Christian character; that religion is more truly honoured when developed in the world than when abstracted from it. We complained, but not without hope; and, indeed, we see

many signs of a growing disposition on the part of our clergy to blend spiritual with secular interests. Why, indeed, should not those truths, which are rightly regarded as the basis of all others, be applied to reason, imagination, and practice,—to philosophy, poetry, politics, and trade? We see no better means of elevating a nation than the elevation of individual men. Christian teaching is the one engine by which such results may be produced, when, instead of ignoring the ordinary impulses and powers of man, it shall lend to them its inspiration and control.

Such interests as we have mooted are those which must gradually rise on the ruins of party strife. Legislation, we grant, has yet much to do, even in the administration of those political truths on which men of all sections seem now agreed. Moreover, it has not only to develop such truths for the future, but to guard from encroachment the liberties which are already won. Still, we think that in principle, if not in detail, the career of British politicians, as representatives of opposite theories of government, is well-nigh closed. Should this prove so, it could only be matter for congratulation. Those who have laboured at the framework of institutions may rejoice, if they have so nearly finished their task that men may turn awhile from the laws that affect their condition to the truths that better their lives.

GREENHILL HALL.

BY MRS. C. CROWE, AUTHOR OF "SUSAN HOPEY," ETC.
IN SIX CHAPTERS.—CHAP. III.

BUT Sir Theobald was alone now; and one might have thought such an ungonial being would have recognised by this time that he was not fit to live with any other human creature, and that the bear would have retreated finally into his den, to sulk and brood alone; but unhappily it was not so; he resolved on a second marriage, and was not long deliberating on his choice. The young lady he selected for his bride was called Emmeline Larpent. She was the daughter of his attorney at Doncaster; and he had chanced to see her one day when business took him in that direction. To see her was to admire her, for she was a lovely little fairy, just home from school; innocent, joyous, and utterly inexperienced, although there was a sort of boyish and girlish intimacy, born of balls and picnics and junketings between her and young Arthur Lupton, who was an articled clerk in her father's office, and whose family were not then Quakers.

When Sir Theobald made up his mind to marry this young lady, it is not to be supposed that he thought it necessary to recommend himself by any process of courtship. On the contrary, he rode over to Doncaster one morning, put up his horse at the Black Bull, walked straight into Mr. Larpent's office, and asked him for his daughter's hand as he would have asked him for his bill. Mr. Larpent hesitated, for few were ignorant of the baronet's character; but then he was ambitious, and much poorer than the world thought him. He was flattered, too, at the idea of his daughter being Lady Maxwell of the Grange; but—there certainly was a *but* in the case.

"In respect of settlement," said Sir Theobald, speaking with a broad Scotch accent, "ye ken weel there's na entail; and aw shall gie her leddyship a handsome dower and alimony, and settle the estate on her heirs."

"But your sons by the first marriage, Sir Theobald?" suggested Mr. Larpent.

The baronet snapped his fingers, and made *a mou'*, as he would have called it. He did not condescend to any other reply. He had fulfilled his promise, and was in no fear of the ghost; he had not bound himself to provide for his sons, and it afforded him infinite satisfaction thus to be revenged on his wife, and defeat, in some measure, her motherly intentions.

This was too much for the lawyer. Sir Theobald was fifty years of age; his daughter not seventeen, and must outlive him, of course, when he should have the sole management of the estate for his grandchildren, and so forth. Thus men reason, or unreason. He did not remember that he was probably consigning his daughter to an early grave, and that the baronet, with an iron constitution, was much more likely to live than he was himself. So "men think all men mortal but themselves."

Moreover, Sir Theobald demanded no fortune with his bride,—he knew the state of affairs too well,—but only that whatever her father had should come to her at his death.

When Mr. Larpent told his daughter that she was to marry Sir Theobald Maxwell, she pouted her rosy lips; for she thought of young Arthur Lupton, and how she liked to dance with him, and how merry and pleasant he was at the picnics; but when her father reminded her that she would be addressed as "my lady," and drive her own carriage, she yielded. She had been at school till within a few months, and had heard little or nothing of Sir Theobald, and she had never seen him to her knowledge; she was but a child, and was unusually childish for her years. It is therefore not to be wondered at that she offered no opposition to her father's will, and that a letter soon arrived at the Grange, announcing the young lady's acceptance of the proposal. Then came the glow of preparation, and the pleasing occupation of buying new dresses, and having them made;

whilst Sir Theobald, perhaps conscious that the less he exhibited himself to his bride the better, instead of hastening over to pay his *devoirs* to her, wrote to Mr. Larpent to say he was going on urgent business to London, desiring him to draw up the deed of settlement, as agreed between them, and have it ready for signature when he returned.

In all probability the father did not regret this want of *empressment* on the part of the lover. Parents who sacrifice their children in this manner do not want to be reminded of their cruelty by the struggles of their victims. Mr. Larpent struck a balance of the advantages and disadvantages of the match; and, by a process of self-delusion, gave the preponderance to the first. Whilst he saw his daughter, with an unfaded cheek and bright eye, gaily occupied with her marriage outfit, and the clerks in his office busy over the parchments which were to make her mistress of the Grange, his conscience was tolerably easy; but he secretly dreaded the first interview of the betrothed couple, and had a presentiment that difficulties might arise even after the outfit and the deed were completed.

Every thing was ready, when a letter arrived from the baronet, saying, that he had been detained longer than he expected in London, but that on a certain day his two sons were to set sail for India; that on the ensuing one he should start on his journey homewards, and he desired every thing might be ready for the marriage, which he intended should be solemnised on the third of April.

It was now the latter end of March; every thing *was* ready; and to prevent his daughter, and perhaps himself, from thinking too seriously of what was about to happen, he opened his house to his friends, and gave a ball, at which all the silly girls of the neighbourhood called her "my lady," and said they envied her luck; whilst their elders looked on her with compassion, called her "poor lamb!" and wondered how her father could have "the heart to do it."

The young men generally envied Sir Theobald, and were indignant with Mr. Larpent; but there was one who took the thing deeply to heart, and that was Arthur Lupton. Emmeline had had a simple preference for him, which might possibly, with time, have ripened into a serious attachment; but Arthur really loved her, much more than he had been aware of himself, till he heard she was to be given to another. Then,—whether because we prize more what we are about to lose, or because pity melted his heart and heightened his affection,—he learnt the extent of his own love and despair. He well knew the misery to which the poor girl was consigned by the impending marriage; for, his family living in the neighbourhood of the Grange, the character of Sir Theobald was familiar to him, and he had often heard the sufferings of his late wife discussed and lamented. But what could he do? How was it possible to prevent the sacrifice? He could not sleep at night, nor do his business by day, for thinking of it. He was a mere youth of nineteen, with a salary of fifty pounds a-year, the youngest son of his father, who had several. Even had the baronet been out of the question, he was aware that Mr. Larpent would never have accepted him as a suitor to his daughter. Of course his entertaining such an idea now would be considered a great offence and presumption; and he had no reason to hope that even the young lady herself would be willing to sacrifice her rank and title for him and his fifty pounds; though, being a good-natured girl, she did appear to be sorry for him, for his misery was too evident to escape her notice. With a pale cheek and hollow eye,—for he had lost his appetite and his sleep,—he attended her to all the festivities that preceded the wedding; the respectability of his family and his youth precluding the idea of danger, in the father's opinion, and rendering him a desirable and safe escort; and whilst she tried to console him by sisterly regard, he sighed and shook his head, and hinted that there was nothing left for him but an early grave.

"If I thought you were to be happy, Emmeline; but I know him better than you do; he's a tyrant to every body about him."

"O, if he's cross, I shall come back to papa."

"That's more easily said than done; women can't leave their husbands when they choose."

"Why, he won't look me up, will he?" said Emmeline laughing.

"Well, he might even do that; I wouldn't answer for him."

"I'd get out pretty soon, I warrant," answered the thoughtless girl.

"Well, Emmeline," said the poor boy, seeing he could make no serious impression on her inexperienced mind, "remember, my father and mother live at Greenhill Hall; they will be your nearest neighbours, and if you want any advice or assistance, I'm sure they'll be the best friends you can have,—that is, if your husband will let you have any friends."

"I shan't ask him," said Emmeline, in a tone of defiance.

"Ah, Emmeline, how little you know! However, my mother is one of the kindest women that ever lived; and if it's only for my sake, I'm sure she would do any thing for you. It would be a comfort to me, when I'm in my grave, if I could know that my mother was watching over you here on earth. I shall be watching over you, Emmeline."

"Well, between you all, I shall be well taken care of," said Emmeline. "But now don't fret so, Arthur. I shall often drive in my carriage to see papa,—it is only fifteen miles; and when you go to Greenhill you'll come and see me; besides, you'll soon forget me, and fall in love with somebody else."

"Never!" returned Arthur indignantly. "I'm miserable enough; don't insult me, Emmeline."

So they talked, as girls and boys do talk occasionally, in a remote corner of a drawing-room, or amidst the clatter of fiddles and feet, where their conversation was interrupted every now and then by having to wheel round some couple who came coursing down the middle of a country-dance.

Ships do not always sail at the period appointed; and Sir Theobald was detained in London longer than he had anticipated. He had by letter announced this delay inevitable, as he described it to Mr. Larpent, desiring him to send the deed of settlement to the Grange, in order that he might look it over before he signed it. It was possible, he said, that he might not be home till the day before that fixed for the wedding; if that were the case, he would bring the deed with him, and they could attach their signatures before the ceremony took place.

This prolonged absence and utter neglect of courtship was rather remarkable; but, strange to say, none of the parties immediately concerned complained of it. The bride did not, for she rather dreaded than desired the arrival of her lover, not because she was exactly afraid of him,—for she had no doubt of having every thing her own way,—but from a feeling of girlish shyness; she was marrying a carriage and a title, and rather shrank from the appendage that was to accompany them; and this indifference arose, not from an interested or ambitious mind, but from a childish and undeveloped one. Mr. Larpent did not, for the reason already indicated; he had his secret misgivings, and thought the less she saw of her bridegroom the better; and Arthur did not, for ardently he wished the bridegroom might never come at all. The little public of Doncaster made their comments on all parties, but with the insincerity that generally prevails in society, they openly congratulated and flattered both the father and daughter, whilst they secretly pitied one and condemned the other.

"Papa," said Emmeline, "as poor Aunt Thomas is too ill to come to my wedding to-morrow, I should like to go to Redlands this morning, and take leave of her. Could you spare Arthur to walk with me?"

"Yes, I think I can," replied Mr. Larpent; "for there won't be much done to-day in the office, I suppose. I promised him a half-holiday, and it may as well be a whole one, I fancy."

Aunt Thomas lived about four miles from Doncaster; and soon after breakfast the young people set off on their long walk, naturally taking the by-road, through fields and lanes, in preference to the turnpike. Poor Arthur was all melancholy and sighs; and as for Emmeline, little as she anticipated her fate, and obscure as her idea was of what she was about to undertake, even she did not feel very cheerful, now that the period of this great change in her situation was so near. They walked on silently, arm within arm, Arthur intensely conscious that that dear arm would never be pressed to his side again, and Emmeline unconscious that he was pressing it at all, her mind being entirely engrossed with her own affairs,—as how she should receive her bridegroom the next morning, what he would say to her, how she should feel during the ceremony, and at that still more awful moment, when she should step into the carriage and drive away alone with him. Her heart sank a little when she thought of that, and of leaving her indulgent father and happy home, where she did exactly what she pleased, to live amongst strangers in a home unknown; but then it was to be her own carriage, and a splendid home, and she would be called "my lady," and there was not a girl in Doncaster who did not envy her.

They partook of an early dinner with Aunt Thomas,—a simple woman, living in retirement and obscurity,—who knew nothing of Sir Theobald, and was therefore elated at her niece's elevation; and then, after receiving the warmest congratulations and blessings, the young people departed to walk home.

As they approached to the end of this walk, which was to be their last, Arthur, who was bursting with grief and jealousy, and had been irritated by the old lady's ill-timed rejoicings, addressed his companion as "Miss Larpent."

"How cross and disagreeable you are, Arthur!" said Emmeline. "What's the use of it?"

"I'm not cross, but I must learn to keep my distance; there's a great way between a poor clerk and a baronet's lady."

"Stuff! Do you think I shan't be just the same to you, Arthur?"

"You can never be the same to me, Emmeline," replied the young man, his heart melting with a word of kindness. "O, Emmeline, you little know how wretched I am; if you did, you'd pity me."

"Well, dear Arthur, and so I do pity you; but if I hadn't married Sir Theobald, you know well enough papa would never have let me marry you, because you're no fortune; and papa thinks so much of money. I'm sure I wish you had had plenty of money, and then—" She stopped suddenly, blushing at the recollection that she was going too far.

"What then?" said Arthur eagerly, and in the excitement of the moment throwing his arm round her waist; "don't stop, Emmeline. What then? Would you have been mine?"

"Well, you know, Arthur, I ought not to say so now; but—O, take away your arm, sir! There's a man looking at us over the hedge." The young man snatched away his arm, and they both felt rather disconcerted.

The hedge ran parallel with the highway; and the man was Sir Theobald Maxwell, who was riding on the turf that bordered the road. He had returned from London a day earlier than he expected; and finding something to be corrected in the deed of settlement, he had ridden over to Mr. Larpent's to get it altered, intending to take that opportunity of paying his respects to his bride, and he was now returning.

"I am very sorry Emmeline is not at home," said Mr. L. "She's walked over to see a sister of mine at Redlands. I should not wonder if you met them coming back. I sent young Lupton with her—the son of your neighbour at Greenhills."

The path where he was riding being lower than the field, Emmeline had seen little more than the eyes of the horse.

man; and having no distinct recollection of his features, she did not suspect who it was. But Arthur, who had seen him several times, recognised Sir Theobald at once; and it would be hard to say whether he felt more pleasure or pain at the idea of the baronet's having witnessed the little love-passion, if it may be so called, above described. On the one hand, it gratified his jealousy and spite against his rival, whom he would have gladly risked his life to wound or slay; but on the other, he apprehended that he might make a complaint to Mr. Larpent of what he had seen, and that Emmeline might get into trouble with both her father and husband. Not to alarm her, or excite her anger against himself, however, he kept his discovery quiet, and made light of the accident; but when they got home, and Mr. Larpent told her he had been there, the truth struck her immediately.

"Good gracious! what will he think?" she said to Arthur. "What a foolish boy you are!"

"I don't care what he thinks," answered Arthur defiantly.

"But I do, though; and if he tells papa, you'll get it, Mr. Arthur, I can tell you."

PROGRESS OF SCIENCE.

THE praiseworthy endeavours of the Society of Arts to elevate the position of literary and mechanics' institutions—by taking them into union, and in some measure causing them to fulfil the duties of educational colleges—are bearing their fruits in the increased number of candidates who have this year presented themselves as competitors, through examination, for the certificates and prizes offered by the Society. Last year the number of candidates was only 52; this year there have been no less than 230. Three of the successful candidates of last year have obtained public appointments; one, Charles Chambers, as an assistant-observer at the Kew Observatory; and two others, Robert Abbott and William Matthew Tayler, situations as clerks in the Privy-Council Office. Lord Granville, Lord President of the Privy Council, and one of the Society's vice-presidents, having five vacant clerkships at his disposal, gave the Society of Arts the privilege of nominating two of its successful candidates to compete for these situations. They were successful against twenty-two competitors.

In one of our previous records of scientific progress, we described the new substitute for the diving-bell, the *Nautilus*. Continued experience testifies to the utility of this machine; and the Council of the Society of Arts, in order to mark their approbation of it, have awarded a silver medal to Major H. B. Sears (U.S.), its inventor. Other silver medals have been severally awarded to Mr. Christopher Binks, for his paper on some new methods of treating linseed-oils and other drying oils, for improving their drying properties in their application to paints and varnishes; and on some combinations and phenomena that occur amongst the elements engaged in the manufacture of iron, and in the conversion of iron into steel:—to Mr. Robert Temple, Chief-Justice of British Honduras, for his paper on "British Honduras; its History, Trade, and natural Resources;"—to Mr. Edward G. Squier, for his paper on Central America, and the proposed Honduras Inter-oceanic Railway:—to Mr. F. Bashford, of Surdah, East Indies, for his paper on experiments with silk-worms, with a view to improve the present silk-yieldings in Bengal:—to Mr. J. B. Smith, M.P., for his paper on the means to be adopted for obtaining increased supplies of cotton.

Our learned and versatile peer, Lord Brougham, has recently been stimulating French mathematicians to examine some paradoxical consequences which result from applications of the differential calculus. Beyond a mere chronicle of the circumstance, we need indicate no more. Those of our readers, however, who wish to pick a hole in that part of mathematical science which arrives at its results through the instrumentality of "ghosts of departed quantities," as Bishop Berkeley called them, may find the arguments and

illustrations of Lord Brougham set forth in volume xlv. of the *Comptes Rendus*.

The Admiral du Petit Thouars, whose remarks on Peruvian mummies we noticed some time since, has recently been followed in that field of observation by M. E. de Rivero, who has transmitted a paper on the subject to the Parisian Academy of Sciences. According to his discoveries, the mummies of Peru are not all the product of an artificial preparation; that in many instances natural conditions of soil and climate have sufficed to give them their present appearance. Of the Peruvian mummies, it would appear that none of the inhabitants—save the bodies of the great Incas—were honoured by artificial embalment; the operators employed in this office being termed *camatus*. As to the process employed, nothing certain is known. The heart and viscera being removed, were preserved in vases deposited in a temple at four or five leagues distance from the town; whilst the body, placed upon a sort of throne, was deposited in the Temple of the Sun, at Cuzco. This ceremony was always attended by human sacrifices; which, however contrary to the usages of Mexico, were always voluntary, the individuals sacrificed belonging to the Incas themselves. Many former writers have described a certain flexibility which Peruvian mummies possessed. M. de Rivero is unable to confirm this statement; no traces of such flexibility having come under his notice.

In Toxicological science, M. Blondlot has recently communicated to the Parisian Academy of Sciences some remarks relative to the discovery of arsenic in organic mixtures. Considering that arsenic has long been the popular, one may almost say the *household*, poison during many centuries, in France no less than in England, it is not a little strange that a latent fallacy equal to that pointed out by M. Blondlot should have been unperceived so long. MM. Danger and Flandin indicated that when a mixture of arsenious acid and organic matter had been fully carbonised, and the carbonaceous result exhausted by hot water, the fluid would be an arsenious solution, from which arsenical stains might be obtained by the usual process of Marsh. For this result to be invariably obtainable, and to the full extent of the arsenic present, it is necessary that the latter should not exist in the form of sulphide. M. Blondlot proves, if his experiments be substantiated, that if the organic matter involved be perfectly fresh, and if, therefore, no sulphide of arsenic have arisen on account of decomposition, in the way long since pointed out by Herapath,—still the action of sulphuric acid on the organic matter may give rise to the generation of sulphide, and therefore the process of MM. Danger and Flandin may fail. As the practical result of his deductions, he states the necessity of subjecting the charred mass, after exhaustion by boiling water, to the solvent agency of ammonia solution, to dissolve out the sulphide; then evaporating the ammoniacal solution to dryness, and treating the residue with concentrated nitric acid; so as to generate arsenic acid, which substance readily responds to Marsh's test.

Photographers need not be told that for excellence there are no object-glasses which can compare with those prepared by Voigtlander; unfortunately, however, the size of these celebrated lenses has hardly kept pace with the increased and increasing size of photographic objects. This shortcoming is about to be remedied. Photographers will hail it as a great boon. In the production of positive impressions M. Joseph Sella communicates some new information to the editor of the French journal *La Lumière*. Premising that ordinary positive proofs have not only the objection of being unstable, but also of being somewhat expensive, on account of the nitrate of silver involved in their production, M. Sella states, how these defects may be obviated by his own process; which is not only more rapid of execution, more easy, more sure, but it always yields the agreeable black tint so much desiderated by artists, in the greater number of cases. The colour is due to the presence of pyrogallate of oxide of iron, which forms a sort of ink,

imbibed by the surface and the substance of the paper. Guided by the indications of Mongo Ponton relative to bichromate of potash, M. Sella considered that he ought to obtain coloured photographic images by exposure to light under a negative proof a sheet of paper, treated by bichromate of potash; washing the paper in water to dissolve away the preserved parts from the contact of light, and afterwards plunging the paper thus treated into a decoction of colouring matter,—for instance, madder, campeachy wood, cochineal, &c. These speculations were fully borne out, and very curious coloured images resulted. By treating these images with chlorine-water, or more simply, by a very dilute solution of bichromate of potash, coloured images on a white ground were produced; but when M. Sella desired to obtain images of still greater intensity, he tried the effect of bringing sulphate of iron in contact with the orange-coloured image produced by light on the bichromate before passing the paper through the colour-bath. He thus obtained, as he expected, a greater intensity of design; but following out the details of the operation, he was surprised to discover, that in addition to the reaction between the image and the colouring matters, there was a special coloration due to the presence of oxide of iron; and remarking that the colouration was due to mechanical attraction between the colouring matter and the paper, he thought that by employing gallic or pyrogallie acid a black impression might be generated on a white ground. These anticipations were also realised.

The detailed instructions for performing this process, apparently of so great importance, are as follows: The white paper having been soaked in a saturated solution of bichromate of potash, is dried, firstly, by suspending it from a thread, afterwards by pressure between the leaves of a blotting-book.

When used it is to be exposed about half the ordinary time, when all the details of the negative will be made fully apparent. The picture is next soaked in water until the yellow tint which it possesses is removed (this takes about half-an-hour); the water should be changed three or four times. The picture is next to be plunged, during three or four minutes, into a filtered solution of protosulphate of iron; composed of five parts sulphate to a hundred parts water, and subsequently washed in a water-bath, frequently renewed. It is to remain in the bath for at least half-an-hour. After this operation, the paper is immersed in a solution of gallic acid, or even pyrogallie acid, the concentration of which may vary within wide limits. Development of the image takes place in a few minutes. It presents a fine black tint, bordering on violet,—the very tint, in point of fact, which photographers generally strive to obtain.

In zoological science we have to mention the discovery of a new species of cat in the Great African Sahara. The advent of this feline stranger to Christian society is referable to some recent explorations of Captain Loche. He reports it to be the usual domestic cat of the Sahara Arabs, and merits to be well known for various reasons. Not only is its fur very peculiar, but its discovery tends in some measure to throw light upon the pedigree of our own domestic cats, concerning which very little indeed is known. That they have a specific descent of their own, and are not mere civilised children of the animals termed wild cats is, we believe, the common opinion now-a-days; nevertheless the knotty question now remains for solution, Where, and whence, and from whom came they? Captain Loche proposes that the new *carnassier* shall be introduced to civilised zoological circles by the name and style of *Felis Marguerite*, from the *chef d'escadron Marguerite*, who accompanied the exploration.

M. St. Claire Deville (the same who first produced aluminium on a large scale) is a very Torquemada amongst the metals. Stretched on the torture-rack of his laboratory, metals the most stubborn and unyielding are obliged to stuncumb and own the chemist their master. The last feat of M. St. Claire Deville, in conjunction with M. H. Delvay, is

that of working native platinum by the dry way. Hitherto, as perhaps most people who read this announcement are aware, that very useful metal platinum has resisted all attempts to work it by fire. It has had to be dissolved out of its native combinations by chlorine, precipitated by sal-ammoniac; and, in short, has only been forthcoming in a metallic state after some of the most delicate manipulations of the laboratory have been applied to it. MM. St. Claire Deville and Delvay now announce that they can not only obtain platinum in the dry way, but all the platiniferous metals. They promise details, which we shall await with curiosity, taking care to transfer them to our scientific corner.

Dr. J. B. Trosk, U.S., has brought before the notice of the Californian Academy of Natural Sciences, at San Francisco, some interesting remarks concerning the earthquakes which occurred in California during the year 1856. The total number during this period, it seems, is sixteen; of which number thirteen were observed between sunset and sunrise; and the shocks were so exceedingly slight, that the first intimation of their occurrence in most of these cases was communicated to the Californian public by local newspapers. Though the whole mountainous ridge extending along the western coast of America, both north and south, is volcanic in its character, and has a bad reputation for its frequent earthquakes, yet, according to Dr. Trosk, the latter occur very rarely, in comparison with former times. The same remark would also seem applicable to the whole Pacific region, to the whole of Oceana, and most of the islands which skirt the Chinese coast; whilst simultaneously, to the west and north-west, beyond the fifty-fifth parallel, both volcanic phenomena and earthquakes have increased in their violence.

THE MOTHER'S FIRST GRIEF.

SHE sits beside the cradle,
And her tears are streaming fast;
For she sees the present only,
While she thinks of all the past,—
Of the days so full of gladness,
When her first-born's answering kiss
Thrilled her soul with such a rapture
That it knew no other bliss.
O those happy, happy moments,
They but deepen her despair!
For she bends above the cradle,
And her baby is not there.

There are words of comfort spoken,
And the leaden clouds of grief
Wear the smiling bow of promise,
And she feels a sad relief;
But her wavering thoughts will wander,
Till they settle on the scene
Of the dark and silent chamber,
And of all that might have been;
For a little vacant garment,
Or a shining tress of hair,
Tells her heart, in tones of anguish,
That her baby is not there.

She sits beside the cradle,
But her tears no longer flow;
For she sees a blessed vision,
And forgets all earthly woe.
Saintly eyes look down upon her,
And the Voice that hushed the sea
Stills her spirit with the whisper,
"Suffer them to come to Me."
And while her soul is lifted
On the soaring wings of prayer,
Heaven's crystal gates swing inward,
And she sees her baby there.

R. S. CHILTON, *United States.*

THE SMALLER FOREIGN CAGE-BIRDS.

AVIDAVATS, WAX-BILLS, CUT-THROATS, ETC.

Of late years, the importation of those beautiful little creatures,—Avidavats, Cut-throats, Wax-bills, Spicebirds, Zebra Parakeets, &c. &c.,—has increased fourfold. Nor is there any reason to believe that this new and elegant "fancy" is likely to die out. One can only regret that such lovely little pets are not gifted with song. Nature, however, is inexorable on this point. *If* they sing, it is "small."

The care that is requisite to keep such delicate creations well and hearty, few people can imagine. Hence the frequency of their loss by death. Extreme cleanliness is the starting point.

Cramp, cold, and asthma, are their great enemies. The season of moulting, too, tries them not a little. Warmth is then indispensable.

To guard against these, they should always be placed in suitable cages of wire, of an oblong shape and fair proportions. They love cheerfulness, and therefore require plenty of light. Besides, *we* want to see *them*.

What is to be specially guarded against is draught. They must, therefore, be placed beyond the action of cross currents of air, and kept in rooms of an equable temperature. This is very important.

Their food, canary and millet (occasionally bread-and-milk), must be given fresh daily; also, clean spring water *twice* daily. Cover the tray deeply with red gritty gravel; that is, gravel *not* finely sifted. They eat the grit to assist digestion.

In summer, their cages may be placed on the lawn, or suspended on a tree. They dearly love to watch the free denizens of air sporting in their native liberty. It keeps them in a state of constant activity.

Some of the Avidavats and Wax-bills are quarrelsome, especially at the season of moult. In such a case, reduce their numbers. Keep them in pairs only, giving each pair a cage to themselves. If once they proceed to blows, and draw blood, the taste of that blood will be fatal to your establishment. They will destroy each other, few feathers remaining to tell the fearful tale.

In winter, I advise (by all means) that their open wire cages be laid aside *for longer and narrower cages, open in the front only*; the sides, top, and back, being of mahogany. This will keep them snug, warm, and nicely private. Hang them facing the window, so that they may have a view of what is going forward; and, by all means, play them a tune or two, daily, on the piano.

Ripe fruits—such as a juicy pear, a melting peach, or a nectarine—are an immense treat to these little rogues; but the colder salads should be sparingly administered.

Nothing is easier than to tame these feathered divinities, and mould them to your entire will. Their affection is unbounded; but remember never to slight them. They are sensitive—very.

I have ascertained that the Zebra parakeets *do* breed; and I know a lady who has succeeded (in London) in rearing a brood of them in a cage. Such a lovely collection of little "Lizards!"

The Avidavats and Cut-throats, when in aviaries, frequently make nests, and lay eggs; but I am not aware of any instance in which the eggs, after being incubated, have come to maturity.

All people who have a desire to *enjoy* the society, and learn the *natural history*, of this interesting tribe, should

have a small aviary built for their especial use. I have one in my mind's-eye, whose inmates thrive famously. The proprietor thus writes me:

"The Cut-throats have built and laid eggs; but some workmen outside the aviary disturbed them, and they have forsaken their nest. They have since nested *again*, laid, and sat. No produce. This has disconcerted them.

The bronzed Manikins, and the Weaver-birds, have made several nests; but they have deposited no eggs.

All our little inmates are very healthy. In March last, our Bishop-bird was habited in a gay and brilliant dress. It had a splendid bright orange ruff round its neck, the lower part of its body being covered with feathers like the finest black-silk velvet, and wings and tail fringed with bright orange. It is *now* changed in appearance to the female Weaver-bird.

The Avidavats have moulted *four times* during the past year; and each moulting produces a differing change in their appearance.

The male Weaver-bird becomes greatly altered in moulting. The feathers on the top of its head, and lower part of its body, become *pink*. The face has now the appearance of a black mask, and it has a dark crimson bill.

The only change in the female is, that the bill from red has changed to yellow.

The Cardinal, in moulting, underwent no change in his appearance. Neither did the Spicebirds, Cut-throats, Java Sparrows, Bronzed Manikins, Sholl-Parrots, or Harlequin Bishop-birds.

The plumage of the Wax-bills has become lighter in colour, with a beautiful pink underneath.

The Indigo-birds have become more intensely blue, intermixed with slate-coloured feathers.

The feathers on the wings and back of the Widow-bird changed from the appearance of black-silk velvet to a brown colour mixed with black."

These very interesting "Notes" will afford some little idea of the pleasure derivable from a study of Foreign Birds, more particularly when located in an aviary.

I am decidedly hostile to placing so much beauty in such prisons of wire as those now in use. The inmates exist rather than live. As for happiness, that is out of the question.

A flight in a spare room would afford these aerial creatures a rare treat. *This* might be readily managed.

Any thing but incarceration, and a lingering life of torture.

WILLIAM KIDD.

VENTILATION: ITS VITAL IMPORTANCE AND EFFICIENT APPLICATION.

[Third Paper.]

If, therefore, articles of food and of medicine, salubrious and highly beneficial in themselves, become thus hurtful when wrongly applied, the extraneous, and often poisonous, matter with which the atmosphere of many workshops and factories is loaded must operate with increased virulence. Many of these cases admit of no mitigation, and can be met only by an entire removal of the cause of complaint. The frightful and loathsome disease of the jaw-bone, to which persons engaged in the manufacture of phosphorus-matches are liable, having baffled all the remedies proposed for its relief or cure, has been most effectually prevented by good ventilation and personal cleanliness.

In private dwellings, there is seldom any special means of ventilation provided; and in the absence of fires, the vitiated air finds an exit only through chinks in doors and windows, and other accidental communications with the external atmosphere. In churches, theatres, workshops, and buildings of a similar description, it is obvious that the purity of the air cannot be maintained by supplies from sources of so adventitious a character. Various methods have therefore been devised for the attainment of this important object—such as injecting fresh air, and drawing out the vitiated, by means of furnaces, air-pumps, fanners, steam-jets, &c.; but all of these necessitate constant attendance, expense of fuel, and complicated machinery.

The practice of ventilation by artificial heat has long been employed in mines, but it does not appear to have been

adopted for ventilating crowded rooms till 1723, when Dr. Desaguliers employed it in ventilating the House of Commons. The operation of his system, however, was defeated by the stratagems of an old lady who had the management of the fires, and who did not like to be disturbed in the use of the rooms she occupied over the house. A fan was then substituted, and placed over the ceiling for the purpose of sucking out the vitiated air; and during the sitting of the House a man was kept constantly at work turning the wheel. Various plans were subsequently tried, with indifferent success. In 1810, Sir Humphrey Davy having been requested to furnish a plan for warming and ventilating the House of Lords, sent in one identical in principle with that of Desaguliers; and in 1820, the Marquis of Chabannes, who had previously ventilated Covent Garden Theatre by a system somewhat similar, was intrusted with the warming and ventilation of both houses. The method latterly employed by Dr. Reid, though ingenious in theory and effective in practice, has been found objectionable, chiefly on account of the great space required for the apparatus, and of the inconvenience experienced by the members from the particles of dust carried up from the hair-cloth carpet by the current of fresh air admitted through the perforated floor. This system of ventilating has been extensively adopted in France, and has been applied to schools, theatres, prisons, and other establishments. In a table given in the *Dictionnaire des Arts et Manufactures*, stating the characteristics of the principal methods employed in France and Belgium, the system cited as the most efficient and most economical is that adopted at the Maison Mazas, a prison consisting of 1225 cells, and constructed on the plan of central inspection. The ventilation is effected by means of a high chimney, in which, during winter, a sufficient draught is produced by the smoke from the heating apparatus, and, in the summer months, by a large fire kept constantly burning at the bottom of the shaft. The fresh air is admitted from the corridors by an opening near the ceiling, while the foul air is conveyed away along with other impurities through a soil-pipe, acted upon by the draught of the large chimney; the whole air of each cell being renewed in the course of every hour, with the utmost regularity, and without any disagreeable currents. The daily expense of coal for the purpose of ventilation is 248 francs (about 1*l.*).

But it is needless to enter into a description of all the different plans suggested for the ventilation of public buildings; we may only state that, after a minute inspection of those which have come under our special notice, and a careful and impartial consideration of all that has been written on the subject by the most approved authors, we unhesitatingly give the preference to the system devised by Mr. Charles Watson, of Halifax, and which is already extensively known over Britain, and highly appreciated by some of the ablest architects and the most eminent men of science.

Mr. Watson's apparatus is so remarkable for its simplicity, and its mode of operation is so subversive of preconceived notions as to the nature of ventilation, that some theorists have been inclined to look upon its marvellous effects with as much suspicion as the churchmen of the seventeenth century regarded the heretical telescope of Galileo. His discovery is nevertheless a great fact, and, in our opinion, forms an epoch in the history of ventilation. The principle on which it is founded may be illustrated by a simple experiment. Mr. Watson employs for this purpose a glass vessel resembling the receiver of an air-pump, about seven inches in diameter, and ten inches high, with a tubular neck about six inches long and two inches wide. The lower edge is placed in a shallow groove, which passes round the circumference of a thin plate, and which may be filled with water in order to prevent the admission of air from below. When a lighted taper is introduced into this vessel, it very soon exhausts the combustible principle of the included air, and notwithstanding the comparatively

large opening in the top of the receiver, ceases to burn. If however, before the taper has quite expired, the funnel is converted into two semi-cylindrical tubes by means of a thin division, a double current, in opposite directions, is immediately established, a copious supply of pure air flows in by the one, and the effete products are expelled by the other; the dying taper meanwhile speedily revives, and soon acquires a full and steady brilliancy. When the tubes slightly differ in height, as in Watson's Syphon Ventilator, the cold air is invariably found to enter by the shorter one. The experiment may be satisfactorily performed even with a common water-bottle, and a slip of pasteboard as a diaphragm. The existence of the opposite currents is rendered visible by holding a smoking paper over the divided funnel, when the smoke is seen to pass down through the one channel, and to ascend and escape by the other.

Mr. Watson rightly inferred from this experiment that if he could establish these spontaneous double currents to and from the open air through the ceilings of our schools, churches, dwelling-houses, and halls, he would revive the drooping spirits of their half-suffocated inmates in the same manner that brilliancy was restored to the expiring taper. He has perfectly succeeded in this; and no small part of the merit of his principle is, that these currents, while shown to exist, operate quietly and constantly, and maintain a sweet and wholesome state of the air without those dangerous and disagreeable draughts that render most other modes of artificial ventilation so objectionable.

The ventilating apparatus consists simply of a divided tube as above described, generally placed on the roof, and forming a communication between the ceiling of the apartment to be ventilated and the external atmosphere. It may, however, be adapted to almost any situation, and has been applied to buildings of many floors or flats, with uniform success, and even to the basement story of buildings, as in the kitchen of the General Post-office, London. It is surmounted by a cowl or weather-cap, so judiciously adapted that it allows free scope to the action of the tubes in whatever direction, or with whatever violence, the wind may blow. A regulating valve is placed in the lower part of each of the divisions, both of which are opened and shut simultaneously by a single cord, thus diminishing or increasing at pleasure the amount of air to be withdrawn or admitted, to suit the season of the year, the number of persons, &c.

It must be remarked, that tubular openings in the ceiling, if undivided, afford no relief. The efforts of the cold air to rush in, and the hot air to get out, appear to neutralise each other, or the cold air falls down with an intolerable current on the heads of those who may be under the openings, with the effect of condensing and rendering more concentrated the poisonous products that have been generated. When the tubes are divided, however, the result is altogether different. In one or other compartment the cold or the hot air acquires an ascendancy, the one entering in a genial and refreshing current to vivify and invigorate the occupants, and the other escaping into space to redistribute innocuously its elements. Such is the probable rationale of Mr. Watson's system, the efficiency of which, under the modifications of application which his great practical experience has enabled him to discover, is unquestionable.

If extensive application and unqualified approval of a system be a test of superior excellence, Mr. Watson's may claim the pre-eminence; the benefits it confers having been appreciated wherever it has been introduced, in the palace of the sovereign as well as in the workshop of the artisan or the crowded factory. From the testimonials Mr. Watson has received as to the beneficial effects produced by his ventilators, one might almost regard him as a second Howard, making a progress through the land, administering relief to those who are doomed to breathe a pestilential atmosphere, and who were considered beyond the reach of the great philanthropist. In one place, a weaving shed, "that otherwise would have been unfit for use during a great portion of the

year, is rendered quite comfortable for the workmen;" in another, a combing shed, in which "the work-people had frequently to be taken out in a fainting state, is so ventilated that such a thing rarely or never occurs." At a paper-works, "in one of the rag-rooms, where nearly sixty women are employed, there were frequent cases of fainting from the closeness of the air.

DIAPHANIE.

THE ART OF IMITATING STAINED OR PAINTED GLASS.

AMONG the amusements of a somewhat artistic character that have been invented as agreeable pastimes, by means of which home-decorations may be devised and executed, none can be turned to more useful account than the process termed *Diaphanie*, by means of which the effect of richly-painted windows may be so closely imitated as to deceive even a tolerably critical eye. Many a dreary window looking into a close back yard, or from a staircase on to a huge perspective of blackened or blackening chimney-pots, may be converted into an agreeable and even richly ornamental feature by this process, which has the additional advantage of being very simple and very economical.

The materials may now be procured, as the new *soi-disant* "art" is at present the fashion, at nearly every print-shop; our own having been purchased in Oxford Street, at (or near) the corner of Argyll Street.

These materials consist in a collection of subjects, some pictorial and some purely ornamental or decorative, richly printed in transparent colours, or coloured after printing with colours equally suitable, and of the necessary varnishes, &c. for completing the operation. The process simply consists in first affixing such coloured prints to the inner surface of the glass, by means of an adhesive material prepared for the purpose, or simply by thin *starch*, which is by some considered still better, and then varnishing the subjects with a strong transparent varnish, both for the purpose of rendering them still more "diaphanous;" and also for their preservation, as after this last process they may be "washed" with the same ease and safety as painted glass itself. It is needless to dwell at greater length upon the mere process, which is extremely simple, and for which full directions are furnished at all places where the materials are sold. The great matter is to apply this method of decoration in an artistic manner.

It has been stated that the subject materials to be most easily procured are figure-subjects of suitable size, and in forms likely to be most generally useful; and also in ornament, such as borderings, centres, corners, &c., in great variety. Nothing would be easier than to stick a figure-subject in each pane of the window to be decorated, merely putting a border round it, and perhaps filling the upper panes with ornament only. But this would hardly give a new character to the window, which would still consist of its

nine or twelve dull routine squares, the enrichment in no way disguising its common or ordinary character.

Let us see, however, whether it be not possible, with a mere repetition of some half-dozen or so pieces of ornament, to construct a design which shall be at once pleasing in itself, and have a tendency to give altogether a new character to the old square-paned window! In constructing the design shown in the engraving, only four principal patterns were used,—a large ornamental circle, a smaller one, a portion of a border, and a corner-ornament. Of the large circular ornament seven copies were required; of the smaller, six; of the portion of border, ten pieces; and of the corner-ornaments, two. In order to disguise the quadrangular formality of the square panes, the large have been placed, as it were, across them, by dividing the pattern, the line of the framework passing up the centre of the circular device, and being to a certain extent lost in its intricacy. In a similar manner the smaller circles are made to break the effect of the transverse lines; and the external border

by narrowing the outer panes, and converging at the top, still further destroys the offensive repetition of the routine squares.

It will be seen that in some instances the circles have been decreased or enlarged by taking away or adding a line to make them fit the design: this is very easily managed, as in the prints there is generally paper enough to spare on which the extra line may, with very little artistic skill and some care, be drawn, while the cutting away is obvious enough. The smaller squares and ornaments, which in one or two places vary and complete the design, are not, strictly speaking, necessary, but they add to its completeness, and are such as may easily be selected out of an ordinary collection, or painted by hand; the proper materials being of course employed. With a very little super-addition of original design, indeed, some very remarkable compositions might be produced.

If it should be thought desirable to obtain greater variety in such a composition as that in our illustration, the quatrefoil ornaments of the four central circles might be cut out, and small circular figure-subjects introduced, many of which may be found very suitable for the purpose, both in style and colour.

It should be noted that the style of ornament selected for our composition is that of the stained-glass work of the twelfth century; one less hackrified than that of the later periods of Gothic, or the well-worn cinque-cento. Care should be taken not to mix styles in compositions of this kind, as the most mongrel and detestable effect would be produced by heterogeneous mingling; and even with well-selected and perfectly homogeneous materials an affair of this kind may degenerate into mere patchwork, if a due attention to general design, both in form and distribution of parts and colours, be not tastefully observed.

D. Maclellan

FROM A PHOTOGRAPH BY JOHN WATKINS

MACLISE.

A VALUED contributor, James Hannay, maintains, with even unusual elegance and force of argument, that all men who have made themselves great are the descendants of the great of former ages; that they are the sap of an old and noble plant, rising through the accumulated *débris* of centuries of ruin, thus vindicating and proclaiming the rights and powers of long descent. However this may be, the idea must, we fear, always remain one of belief merely, and unprovable by fact. Certainly it is so in the present case, though the quality of the race does seem vaguely shadowed forth in our brief knowledge of Mr. Maclise's ancestry. More than a hundred years ago, one of the family was wounded at Fontenoy, while another fought for the Stuarts under Prince Charles. The father of the artist held a commission in the regiment of Elgin Fencibles, and, while quartered at Cork, married a lady of good family in that city. The offspring of that marriage was three sons; the renowned subject of this paper, a brother distinguished as a surgeon, and a third brother, who has attained rank in the army.

Daniel Maclise was born in Cork, January 25th 1811. We do not find any particular record of that wonderful precocity and adaptiveness to the future course of fame, upon which papas and manumns dilate so fondly; but in place thereof, a steady and much more serviceable devotion to study, which carried him onwards through those shocks and difficulties which beset a man striving to rise above the level of his birth into the clear air that blows about the eminences whereon stand clustered the great men of every age, and whence they may look with some sort of prescience upon the progress of the race which they are destined to elevate and adorn, and maybe discern something of the means of guiding which are in the hands of the Most High.

It is clear that although we do not hear of Maclise as an infant prodigy, yet in very early youth he had attained sufficient skill in drawing to attract the notice of strangers; for we have the assurance of the editor of the *Art Journal* that, in 1820, he remarked a bright-eyed handsome boy drawing in the rooms of the Society of Arts at Cork; and this gentleman proceeds to felicitate himself, as he well may, upon having in some measure prophesied the future celebrity of the student, who was no other than the present Daniel Maclise, R.A., &c. The next attainable fact represents him as quitting a banking-office at the age of sixteen. This would seem to indicate opposition to his professional progress from some cause or quarter with which we are unacquainted; for it could not be expected that the energetic and promising youth, who had already won credit for himself at so early an age, would voluntarily abandon that course which his natural genius had so clearly marked out. If the reader will turn to the portrait, he will perceive that it is not that of a man who would at any period of life readily diverge from a set and success-promising resolution, but rather of one who, with the keenest hopeful firmness, would cut out a path through a forest of dangers and difficulties.

This interval was not, at any rate, of long duration; for he is next discovered drawing portraits of the officers of a light-dragoon regiment (the 14th, we believe) which was stationed in his neighbourhood. It would be not a little interesting to meet now with some of these early labours. We should expect to find all the immaturity of those splendid powers which have since distinguished their possessor, as well as some of that clear scientific accomplishment in drawing which marks his works,—accomplished, not because graceful only and very pretty, as is too common, but full of incipient knowledge of the facts of nature herself, therefore learned and accomplished in the true sense of the word; with this, much of that firm, hard, somewhat over-resolute character, to which not a few of the faults of his works are due, and which will not fail to be remarked as the feature of the man. We have a theory,—no new one, however,—that there may be discerned in the personal appearance of a man the peculiar

qualities of his works: how the subtle, penetrating, and luxurious mind of Titian is evidenced by his noble, keen, and discriminating face, that has its best exponent in his pictures, which are the workings-out of those characteristics in magnificence and completeness; how, also, the firm regardful eye and genuine English face of Hogarth are but the predications of what we find in his works,—their wisdom and their humour, which, although not without coarseness, is ever tempered and directed by a purpose looking to the end.

The *physique* of no man could better represent his mental capacity than does that of Maclise; for, standing nearly six feet two inches in height, his figure spreads out broad and grandly to a perfect human development, surmounted by such a head as the portrait shows. Years ago, when he was in the early prime of manhood, it was said there was not a handsomer man in London; and now there are few whose intellectual appearance is more striking. About the whole aspect there is something knightly and chivalric:

"A feudal knight in silken masquerade;"
or,
"—— like a modern gentleman of stateliest port."

Just when the last faint traces of feudality are being swept away by the new phases of the times, up rises a painter whose mission seems that he should present to us the glories of the departing system at their brightest, their noblest aspect in chivalry, in order, it would seem, that what was fair and true about it might be exemplified to coming ages, as far as painting could present the thing. For Maclise is essentially a romantic painter; chivalry is his great theme. The romantic character must be carefully discriminated from the Gothic spirit, of which Albert Dürer was probably the culmination: for the first deals with gallant and brave deeds, pays homage to fair ladies, and rejoices in justice and mercy; while the other goes deeper, and is never without a cast of thought about it that may darken into grim humour, or something terribly grotesque, although occasionally dissolving in tearful tenderness, as a black cloud falls in beneficent rain. The fact is, that these specialities are the peculiar characteristics of two races of men in their thoughtful mood: the romantic is the Celt, with his gallant hardihood and frank gayness, whose heart leaps at the sound of a trumpet; while the Gothic is the spirit of the graver Saxon, who cares less for the appearances of an act than for its tendency.

This excursion is not irrelevant, but made in order that the reader may appreciate the precise qualities which distinguish our present subject. That Maclise is the romantic and chivalric enunciator we describe, bare quotation of the titles of many of his most remarkable pictures will suffice to prove. "The Vow before the Ladies and the Peacock" (1835); "Henry VIII. and Anne Boleyn at Masque;" "Robin Hood and Richard Cœur de Lion;" "Christmas in the Baron's Hall (Procession of the Boar's Head);" "The Knight's Farewell to his Ladye;" "The Return of the Knight;" "Francis I. and Diana of Poitiers;" "The Sleeping Beauty;" "Chivalry (time of Henry VIII.);" "Spirit of Chivalry (in the House of Lords);" "The Marriage of Strongbow;" "The Ordeal by Touch;"—these are all more or less chivalric in subject; and, in addition, there are the following, which become so by the way in which the artist has treated them: "The Spirit of Justice," in the House of Lords (1850); many of the illustrations to Bulwer's *Pilgrims of the Rhine*; also a large proportion of those engravings to Moore's *Melodies*; and lastly, that most notable series, the latest fruit of his genius, "The Story of the Conquest," this year, in the Royal Academy.

Having thus endeavoured to establish a distinct individuality for the prevalent tone of Maclise's works, and thus, to the best of our ability, brought him, so to speak, before the reader, we shall proceed with those grades of his life which have contributed to such a consummation.

Following the series of facts attainable, we find him studying anatomy and dissecting under Dr. Woodroffe (probably at Dublin). In 1828, he arrived in London, entered

the Royal Academy as a student, and rapidly gained numerous honours in that institution, especially the medal in the Antique School, and that for the best copy of a picture. About this time appeared a series of portrait-sketches of literary and other celebrities in *Fraser's Magazine*, of which Maclise was the draughtsman, to a text by Dr. Maginn. In 1830, he proceeded to Paris, and in the following year gained the gold medal in the Royal Academy, London, for an original picture of a subject given by the judges, which was, "The Choice of Hercules;" a work probably one of the most remarkable which have yet received that honour. He now devoted himself with the greatest ardour to painting, and produced in '32 "All-Hallow's Eve," an Irish subject full of spirit and power; also the "Francis I." just mentioned. Then came "Mokanna Unveiling," from Moore's "Veiled Prophet of Khorassan," in *Lalla Rookh*, which, on its exhibition at the British Institution in '33, at once brought the artist into a great position. The well-known picture of "Captain Rock," another purely Irish subject, appeared in '34.

"The Vow before the Ladies and the Peacock," exhibited in '35, was perhaps the most thoroughly characteristic of the view we have taken of Maclise's idiosyncrasy, and in itself a very remarkable and original picture, of which we find contemporary critics speaking in the highest terms of admiration as to its splendour, richness of incident, and variety of design. This was pre-eminently a chivalric subject, representing the assumption of one of those fantastic duties which the warriors of the old day took upon themselves with an actuality of feeling which is not a little startling to our modern ideas. The self-devoted champion pledged himself to accomplish some bizarre achievement, solemnly calling upon that remarkable chivalric emblem the Peacock, and making the ladies witnesses and confirmers of his asseveration. The entire picture was full of gallants and fair ladies, variously employed at a festival in a baronial hall, while near by were seen some jolly monks regaling themselves. The whole extravagant spirit of the subject was most fitly conveyed in this splendid painting, which being exhibited simultaneously with Wilkie's "Columbus," divided the criticisms and laudations of the journals of the day with it. The artist reaped plenitude of honour by this work, being elected Associate of the Royal Academy in that year; a fact which in itself shows how rapid had been his advance since gaining the gold medal in '31.

The picture of "The Ribbonmen," another Irish subject, then followed; after that, "Puck enchanting Bottom," and the "Interview between Charles I. and Cromwell" (of course imaginary). He then returned to Shakspeare for his subjects, painting "Macbeth and the Witches," and "Henry VIII. and Anne Boleyn." After these came the very remarkable picture, "The Halt of Bohémian Gipsies," which was re-exhibited six years ago in London, a work painted in an unusually dark tone for the artist. "Myrrha and Sardanapalus;" the "Robin Hood;" with "Christmas in the Baron's Hall," and a picture, purchased by the Queen, of "Gil Blas and the Parasite," were almost consecutive in their appearance. In 1839 was exhibited a "Scene from *Midas*," and about this time another subject from *Gil Blas*; also, "Salvator Rosa painting Masaniello's Portrait;" "The Knight's Farewell to his Ladye;" "Hamlet," and "Malvolio before Olivia" (both in the Vernon Gallery); two subjects from Goldsmith—"Olivia and Sophia dressing Moses for the Fair," and the famous "Gross of Green Spectacles." The three last, with those from *Gil Blas*, were examples of the artist's power of dealing with subjects requiring great feeling for humour, his complete success therein displaying a new element of character. "The Sleeping Beauty," and the "Origin of the Harp,"—a subject from Moore,—indicated a return to romance; while "Macbeth and the Ghost" was a very remarkable illustration of Shakspeare. "A subject from *Comus*," painted for the King of the Belgians; with "Chivalry,"—a lady arming a knight; "The Spirit of Justice" (both the last in the House of Lords); "The Ordeal by Touch," "Alfred in the Tent of

Guthrum," "Caxton in his Printing-Office," "Noah's Sacrifice," "The Marriage of Strongbow," and "Orlando and Charles," must be so fresh in the minds of numerous readers, that bare mention is all they need.

These, with the picture in the Royal Academy, "Interview between Peter the Great and William III., at present form the chief of Maclise's works; and for their interest and importance have not been surpassed by any living artist, extending as they do over a period of twenty-five years. In 1840, Maclise reached the grade of Royal Academician,—about twelve years after leaving his father's house; a rapidity of progress in success which is very rarely attained, even by men as indefatigable and fortunate as himself.

This is no place to enter into a disquisition upon the faults of Maclise's pictures; faults peculiar to himself, and which are sufficiently obvious to every observer, and such, moreover, as are constantly dwelt upon by his critics, who, while doing so seem entirely to forget the very noble qualities the artist's work otherwise possesses; a style of criticism only too common with the ordinary *employés* of the press, whose object appears most frequently to be that of writing a trenchant article, instead of passing a well-grounded, fair, and candid judgment. We shall here close this brief memoir and these remarks with the observation, that the subject of them is still in the prime of intellectual life; and so far from showing the slightest sign of mental decadence, has just completed that series of designs which have attracted so much attention at the Royal Academy this year:—the before-named "Story of the Conquest," which, whether we consider them as an admirably chosen procession of subjects to illustrate a memorable historical fact,—as dramatic and powerful compositions, fitly bringing before us each scene selected,—or as successive grades of an artistic achievement, are equally just in selection, various and vigorous in conception, and complete and comprehensive in progressive advancement. Not less, we believe, than twelve years have been spent in the preparation of this series of works; and it shows how truly the artist is devoted to Art for its own sake, above and beyond all questions of petty praise or momentary appreciation. And the world is now indebted for their exhibition to the efforts of those who had seen and reverentially admired them in the artist's studio, and not to any desire of their author for publicity, which, in truth, he has shunned, nay, for a time resisted. In this the chivalry of Art at least rivals that other chivalry which he so loved to paint.

RASCALDOM AND ITS KINGS.—CARTOUCHE, KING OF PARIS.

By G. W. THORNBURY.

[First Paper.]

I HAVE an extreme affection for rascals, my family plate being beyond the reach of thieves, and my pocket not worth picking.

I like them for their ingenuity, Ulyssean craft, foresight, daring, perseverance, knowledge of human nature, wise cunning, and intrepidity. I like them because they group so well, and are so picturesque; I wonder at them as incarnations of Mephistopheles and Beelzebub, doing the dirty work of the unmentionable place in a shrewd, wily, earnest and—in a sense—not uncommendable manner.

From the Golden Farmer back to the Egyptian chief-baker, I know their tricks and stratagems, their laws and ordinances. As to the metaphysical side of the question, as to whether thieving arises from a mental want or a mental excess, I never trouble myself. It may be a mere logical misunderstanding; it may be a warp of the judgment, a sort of squint of the reason; it may be blood to the head, or want of blood; it may be a perversion, organic or innate. On the other hand, though thieving may not unnaturally be assigned to a mental strabismus or monocularity, it may perhaps more correctly be classified with that genus of mental phenomena

known as habit grown chronic,—a sort of monomania, or insanity.

In this way of thinking, thieves become interesting studies to the sucking metaphysician, who ought to rejoice, therefore, when his watch is stolen, and to shout for joy when his spoons chink into the burglar's nocturnal bag.

Of thieves and their doings I have taken a wide survey. From the Copt who cut off his brother's head, to destroy his identity, when he fell into Pharaoh's man-trap; from the spy in Herodotus, whom the Milesian shaved, wrote secret intelligence on his scalp, kept till his hair grew, and then sent on his distant mission; from Duval to Manning; from Shakebag to Shepherd,—I know all their twists and turnings, and can divide their schemes into codes and classes. I acknowledge, in this flat age, I revel in their strange and subtle plans, their ruses and ingenious forms of spoliation; I draw from them proofs of the limitation of the human imagination, and of the expansibility of human badness. The sensitive touch of the felon shows me the undeveloped capabilities of our neglected senses; I find with astonishment in the thief, aiming at small ends, the patience of a fakir, the heroism of an old grenadier, the endurance of an Indian, the subtlety of a statesman, the craft of a diplomatist, the courage of an Alexander. In fact, I fill my mind with half-thought-out theories, that amuse me, if they do not make me wiser. The wig-stealing in Queen Anne's reign, the cloak-stealing on Louis Quatorze's Pont Neuf, the diamond-plucking of Barrington, the old Bag-shot highway doings with mask and pistol, the mail-coach rifling, the Elizabethan gambling tricks, with mirror-reflections and gangs of "ferrets" and "setters," we must for the present pass by. The old English purse-cutting, ring-dropping, gold-chain chopping; the "chauffeurs," who burnt the feet of rich farmers to make them "shell out" their money, we must leave behind us, with many score of "priggers of prancers," tricks of Smithfield thieves, sham-Abrahams, Salisbury-Plain sailors, and proceed at once to introduce our readers to the great *Louis-Dominique Cartouche*, the king of French thieves, and the terror of Louis the Fourteenth's Paris, of the St. Louis, Champs Elysées, and all the hills, quais, boulevards, and hotels of the French capital, in the days of Molière and his merry world. There was a time when this name, harsh and rough, and reminding one of the soldier's bloody lips smeared black with powder, was enough to sell any book or play to which it was attached. There was a time when bewigged men in Covent-Garden clubs talked for long nights about this Cartouche; and when, in German Linden Streets and in Dutch Exchanges, the gossip of busy men ran to the same tune. His life is a proof of the irresistible tendency with which some minds, reserved, acquisitive, and without veneration or moral self-restraint, run headlong into crime.

Cartouche was the son of a poor cooper, who lived in 1683,—the year the rogue was born,—in the quarter called La Courtelle, not far from La Fontaine aux Echaudez. The ambitious father gave a good education to his children, and particularly to Louis-Dominique, whom he had named after a bad king and a good saint. Quick, ready, smart, and with a strong memory, Cartouche got on so well at school, that his father resolved to push a point, and send him to a Jesuit's college. This foolish ambition the father bitterly repented of. The school was full of rich tradesmen's sons, who dressed in all the gold-laced splendour of that age of black wigs, lace-cravats, plum-coloured coats, deep-flap waistcoats, swords, ruffles, and red heels. Cartouche, short and vain, began to steal to obtain money for the roulette table, the comedy, his mistress, and the Burgundy of the tavern. He, the cooper's son of La Fontaine aux Echaudez, was not to be outshone by purse-proud peruke-sellers of the Place Royal. His first thefts were not worthy of his future greatness. He began by pillaging the patched panniers of the old women who sold fruit at the gate of the college at Clermont. His success made him a thief for life. Men who have once let their imaginations

run wild on the advantages of borrowing money seldom return to the severe and cold materialism of cash down. Men of loose principle, who find out that lying is power, seldom deign afterwards to confine themselves to dull truth. Cartouche could never any longer remember the duty of honesty; its self-protection, its religious motives, were thrown behind him. He stole the boys' books and slates. Wanting money to buy a smart *purpoint*, carnation ribbons, and lace, he resolved, at the mature age of eleven, on a grand *coup-d'état*. He had an object of course; he gratified his natural tendency, and he rejoiced in the danger and exciting sense of adventure which stealing gave him.

In the fourth class, his chief friend was a young marquis, whose tutor liked him, and with whom he often spent whole days. He came in and out when he liked, for they were companions and class-mates. One day the quick-eyed, quick-eyed Louis heard the valet say that he had just brought his master a hundred crowns, and locked them up in a casket. The opportunity set our king's brains fermenting like barm. The thoughts of such a chance worked upon his cupidity and acquisitiveness like madness. He could not keep his eyes from the casket; night and day, for a week, he used to say afterwards, when in the Conciergerie, he thought of nothing but that box.

Should he steal it? No! yes! that claret coat, *la belle Pomponne*. The first step; ropes haunted him. But Vanity shook her ribbons, and conscience fled away. His good angel, always snubbed and forgotten, left him as a wife leaves the house that has fallen under the sway of the courtesan. He watches the valet and the governor out of doors one sunshiny morning. He goes to his class, steals the key from the pocket of the marquis, asks the regent's leave to go out, races to the room, passes on to the valet's, which is behind, unlocks the door: the casket is moved. He looks every where—under the bed, behind cloaks, pokes with sword under drawers, looks in the cupboards. Yes, there it is, on the top, just in the dark, on the great *armoire*. He puts two chairs one on another, mounts, rips open the box with a cooper's iron of his father's, and the crowns, the crowns shine before his greedy eyes. All goes well; he counts and gloats. Hush, a noise! the governor has returned; gone to the marquis for the key; he misses it; thinks it must have been left in the door.

The tutor bustles back. Yes it was; he sits down to read his humanities, takes snuff, coughs, and falls asleep, as tutors do. Soon after the valet and marquis come back; the one from the city, the other from class. Cartouche, rolled up into a ball behind the box, sweats with fear, dares not cough, nor scarcely breathe. People come in, and wonder at his disappearance. Some are sorry, some glad. The valet, having a headache,—perhaps too much wine,—goes to bed for the rest of the day.

A hundred times Cartouche prepares to call out, or to leap down, and throw himself at his feet, owning his guilt. That little heart is a hell of pain,—fear, rage, lust, covetousness, and suspicion. The valet, himself a rogue, may be ungenerous or cruel; he will wait. Night comes, he has not been seen; the valet groans, kicks, and rolls. Cartouche cannot, does not wish to sleep. Another day, the valet is no better; the wine was bad. When he moves a curtain, or shakes up his pillow, a fresh cold sweat breaks out on Cartouche, faint with hunger and burning with thirst.

That night there is a great ball at the Duc de Quelque-chose: carriages roll, torches glare, every body's carriage stops every body's way, scented tossing ringlets are moving before a thousand mirrors, the marquis's valet must be there to wait; the last bow is tied, the scent-stopper put in, the door clicks, the thief crawls down. Alas, cursed ill luck! the door opens again, and the governor and the marquis come back, eager for an hour with Aristotle and his Poetics. Open eyes, tears, stammered words. A year later, and it would have been a scream, and a stab, and a slammed door; now it is bent knees, lowered eyes. He tells a lying story of fear of the rector, of exercises, of hungeriness; they bring

him food, not thinking of the crowns, and promise to appease the angry regent, who has uttered dreadful threats.

Once out in the fresh street, he felt safe and free. A hundred crowns in his pocket, and none the wiser, the dangerous feeling of a new power within him, which made him stronger than his fellows, entered into his heart.

He goes home to his father, is scolded by the unsuspecting cooper; appeases him with more lying excuses,—lying is now easier to him than truth; sleeps sound, and the next day revels at the Foire St. Germain. Again a pitfall; his pale-faced brother meets him, tells him the whole affair is discovered, put together, and known; whips and dark cellars await him at Clermont.

Lust of gain and rage have ruled Cartouche for two days, now fear gets the upper hand; but even this timid passion grows powerful when backed up by strong will and the energy of rascal greatness. Away from Paris, running, leaping; dome of the Invalides sunk to a dark mushroom; now fields, vineyards, Reimemoulin; in fact, many leagues from Paris and its broad quays, and the bridge with Henry IV.'s statue, and the Invalides, and all the convents, and that red Grève, and the Bastille—Bah!

The thief, afraid of being robbed, suspicious, wily, reserved, prepared for rubs, finding no inns, creeps under a bush, there intending to wait the day, and, if it please God, sleep. A noise awakes him; twenty paces off he sees, by a dim moonlight, some twenty dark figures dancing, singing, and eating. He thinks he has got into a witches' Sabbath, and recommends himself to God, confessing his sins. Prying into suspicious bushes, the ragged cohort (really gipsies, and naught else) find a sharp-looking boy, very frightened and very ragged. They dance round him, and he, still thinking them witches, screams; they in turn become frightened, and take him for something not "canny." At last they speak to him in French, and invite him to eat. Stolen fowls, pigeons, and sucking-pig furnish a sumptuous banquet. He falls asleep by the camp-fires, and awakes to find that he is lighter by a hundred-crowns weight. It is dangerous to sleep among Bohemians who give people dinners for nothing. Still any dinner is dear at one hundred crowns.

The dramatic position is worthy of Gil Blas. The boy gets up and threatens the old witch, who queens the troop, to hang the whole band; and he looks as if he was the boy to do it. But the witch has not become a queen for nothing. She screamingly tells him that boys do not generally carry a hundred crowns about them; she knows he has robbed his father, and has run away, and she will take him home again. His lip shakes, she has caught him. Then she praises his beauty and wit (he smiles; caught again), praises Bohemian life, shows the pleasures he may grasp, and the dangers that await him. In an hour's time he is an avowed Bohemian thief and rogue for life.

In three years Cartouche learns all the gipsy tricks,—how to shoe horses, how to clip and break them in, how to poison any farmer's pigs and cure them again, how to break iron and mend pots, how to hook linen through windows and rob hen-roosts, how to tell fortunes and pick pockets. He was just becoming a chief at fifteen years of age, when the parliament of Rouen put down the band. Some swing on gibbets, some groan under the axe, some take to their heels; Cartouche resolves to go to sea; he has learned all land tricks, and sighs for fresh worlds of rascaldom.

A respectable uncle of Cartouche, plump and well off, sees on Rouen Quay—among coils of rope, piles of casks, old anchors, and beams—a ragged boy, eating black rinds of sausages that some Dutch sailors have thrown him. Though black, ragged, and barefoot, he recognises his lost nephew. Good old man! he cries, falls on his neck, and overwhelms him with tenderness. The boy is taken to an inn, washed, and clothed; and the same night uncle writes to Paris to intreat his brother, the cooper, to forgive his prodigal son. The father, whose pride is hurt at the degradation of a son whom he has striven so much for, writes back

a fulminating letter, and will do nothing for the disgrace of his family. He had no pity for his misfortune, and forbade his return, unless he wished to perish by his hand. The rogue returns, however, hides for days in his father's shop, falls ill, and, at the point of death, is forgiven by the stern and honest craftsman.

For some time after his recovery, all goes on well; but vanity and vice soon lead him astray. He again strives to be the fop, and to dress accordingly. He falls in love with a young milliner, who slights him for richer and gayer lovers. He robs his father's till, buys silks and jewels, and becomes the favoured lover of the venal fair, to be deserted by her the moment his purse runs low. Cartouche turns pickpocket to maintain his love. He thinks he can nail quicksilver to the point "fever-heat." He is loaded with watches, handkerchiefs, snuffboxes, sword-knots; he does nothing, but is always well dressed, and passes himself off to his suspicious father as a successful gambler. One day, however, the cooper finds out his storeroom, and discovers heaps of jewels, gold crowns, gold boxes, flagons, and *etuis*; he puts them back, says nothing, but drives off to the penitentiary of St. Lazare. He promises the Père Procureur a pension if he will chastise and correct his son.

Cartouche, little suspecting, is invited to go to St. Lazare with his father about an order for five hundred casks. They start in a hackney-coach; father grave, son gay and foppish. His keen eye, betraying no alarm, suddenly sees archers drawing round the coach; he marks the trap, and is prepared. Coach stops; father gets down first, and goes in to get an order to see the gardens. It is time; Cartouche throws off his justaucorps, wig, and cocked-hat, appears in bare sleeves, ties his head round with a white handkerchief, and passes out through the archers in the character of a confectioner's boy.

In five minutes, father returns with two brothers of the order. This is the signal; the archers close in, open the coach-door, and capture—not Cartouche, but a coat, wig, and hat. Some are for pursuing; others, less energetic, for waiting; the father resolves to go home, and trap him at his return. He finds the door open, drawers open, money, treasure, and son, all gone.

Cartouche, once more free, paints his face, dyes his skin, changes dress and wigs, and gives up his milliner, and continues to pick pockets. Wherever a careful man can find work, he goes—ball, mass, comedy, execution, any where. He is alone, and French thieves are ignorant of their future monarch.

One day he steals a fat purse from a German in the Jesuits' Church, and soon after is touched on the arm and dogged all over Paris by a stranger, who claims the prey.

"My purse," said the stranger.

"It is at the end of my sword."

"That'll do, my brave; I only wished to see if you had as good a heart as you have fingers. I'm satisfied."

Then falling on the rogue's neck, the stranger, a Paris pickpocket, told Cartouche he had seen his *coup*, been struck by his unequalled subtlety, and wished to be his comrade.

Cartouche, thinking him a spy, remained reserved. At a turn of the street, they hear the noise of swords, and come upon some lackeys fighting; his friend disappears, and returns presently with a hat full of louis, which he divides with him. They mount to a fifth story; Cartouche is introduced to an old woman and two daughters, to the youngest of whom he is plighted—in brief, thieves' marriage. His host shows him the danger of working alone, without friends to assist him in escapes, and in raising a mob to create a diversion and procure a rescue. They become comrades, and an unholy alliance is formed.

In a short time the band breaks up. The brother-in-law retires to the Toulon galleys, and the women to the Hospital, under the care of the great Commissioner of Police, M. d'Argeuson.

Cartouche, bent on travelling thoroughly through rascaldom, turns blackleg; gipsy, pickpocket, bully, petty lar-

cener he has already been. He lodges in the Rue St. André des Arcs, and hires two valets, whom he clothes in rich liveries; one of them, who robs his master in order to support his mistress, denounces Cartouche. He escapes the terrific glance of D'Argenson, fresh from investigations of the *convulsionnaires* and *empoisonneurs* in the Burning Chamber and the Bicêtre dungeons; but Cartouche's good name is gone; he dare not show himself at the green-cloth tables.

He therefore, honest man, turns spy and betrays his friends to D'Argenson; gratifies at once his cupidity, ambition, and revenge; but, cunning as he is, is trapped by a recruiting sergeant. He had promised to provide this fellow with twenty-five men; but four were still wanting, and Cartouche, drugged and snared, was dragged off to Flanders; himself to make up the complement. Making the best of a bad bargain, Cartouche shouldered his fusée with cheeriness and skill, got promoted, and was praised by all his officers for his courage and exactitude.

The disbanding came, and with the disbanded soldiers now swarmed thieves. Cartouche became the midnight king of Paris; theatre or tabarin, Pont Rouge, Pré aux Cleres, Luxembourg, Louvre,—it was all his. He knew the secret crimes of his band, and none dared desert. Dreadful oaths, enough to make the devil shudder, held these rascals together. One fine Sunday night the troops met on the Boulevards. There were two hundred men; some refugees from St. Lazare, others runaway apprentices, ruined gamblers, criminals, shopmen turned soldiers,—in fact, all the idle, dissolute, and wicked of Paris. He drew up laws for them, and was unanimously chosen their leader. At their first meeting, a drunken beggar heard their vows, but did not disclose them, for he took them for a real army, and Cartouche for a generalissimo. He assumed the despotic power of putting to death spies and traitors, and swore not to spare even his own brothers, who had now joined him, if they dared to betray the band.

Once organised, this satanic army set to work. Murdered men were found every night in the Seine; bodies with bruised heads or stabbed chests were thrust into church-porches and rich men's doorways; gallants, parted with by laughing mistresses in gilded chambers, where mirrors flashed with a hundred lights, were next seen, blue, swollen and strangled, at the doors of their chambers in the Quartier Latin; lodging-houses were sacked; coaches waiting at the doors of le Marquis Carabas stripped and despoiled; muffs and swords, hats and hoods, diamond-buckles, sword-knots, and snuff-boxes disappeared as if an enchanter's wand had waved over them. At night-taverns these trinkets reappeared, smeared with blood, the snuff-boxes crushed and battered, the hats pierced with bullet-holes, and the muffs mudded and torn.

Some of Cartouche's gang climbed, by means of rope-ladders, into rich men's houses; fat abbés and pompous marquises stared to find, on their return from court-ball or comedy,—*Les Précieuses Ridicules*, par exemple,—the lock off the door of the *premier étage*, the rooms gutted of rococo gold clock, the green satin flayed from the chairs, the gilt fringe of the curtains missing, not to mention the little desk with the 200 louis-d'ors? Others attended St. Sulpice, Notre Dame, and the chief churches, praying very hard opposite shining altars, with two wax hands covered with gloves, while with the real offending members they cleared those who knelt near them of watch and purse.

Every now and then M. d'Argenson's eagle claws fastened on some unlucky thief; but the more he bled rascaldom, the faster the blood increased; bleeding increases blood. Cartouche had spies every where,—in court, in barracks, in shops, in hotels, even among M. d'Argenson's dreaded archers, who breathed nothing but steel and cord.

Cartouche needed a well-filled treasury. He had spies to pay; miss a day, and there was danger. There were his workmen, who carried about and sold the stolen goods; receivers who hid them behind sliding-panels, and over beds, and under movable floorings. There were hiding-

places for emergencies, and their daily rent. All these people charged high, and required ready money. Then there were bewitching courtesans, smooth with pearl-powder and blushing with rouge, who decoyed young country abbés, and drunken spendthrifts, whom they stabbed or poisoned if they grew restive or troublesome. With all these expenses, they never could grow rich; they baled and baled, and kept the water out, but never got dry and safe; rest a moment, and the boat began to settle down into the white jaws of the sea.

So went on affairs from the peace of Utrecht to the year 1719. The paper-money made the fortune of Cartouche; a portfolio or pocket-book now sufficed for a week's work. The rogues grew bolder; they followed home merchants from the banks or from bargains in the Rue Quinquempois, knocked them down with life-preservers, and while they lay stunned, robbed them, and fled. Others they choked with pitch-plasters, on the Burke and Haro principle; and others they blinded with handfuls of dust.

They swept the high roads, too, with their Bohemian cavalry; robbed the mail-bags, stripped the passengers, tied their hands, laid them on their faces, and rode off. On the 28th of April 1721, the diligence was stopped near Chalons by masked men, who stabbed the postillion, and carried off 180,000 livres, leaving in the road 200,000 more that they were unable to remove. Cartouche himself deigned to rob a coach; he first persuades an officer, his companion, to slay a valet they had brought with them; and then, to insure secrecy and secure his spoil, shot the murderer himself.

Paris grew alarmed, the watch was doubled, and thirty sous a-day given to the watchmen. Rogues and vagabonds were ordered into exile, and armourers were forbidden to sell arms to strangers. The arms were soon taken from them; but Cartouche cared not; his band fought, drove away the watch, and bribed or intimidated its members.

The toils drew in round him, however, and he began to feel the space narrow round his feet. Joseph Lami, a Jew, his friend, was arrested for stabbing another Jew and strangling his wife. He was baptised, and then broken on the wheel. This man had a wife at Vienna, another at Lille, and a third in Paris. He had several times changed his religion. Dumesnil, Cartouche's lieutenant, narrowly escaped; La Magdaleine died on the rack; l'Amoureux, accused of murdering a jeweller, escaped, after a dangerous trial.

Hitherto no one had heard of Cartouche; even M. d'Argenson did not know the name of the leader of this dreadful band of two hundred. Men who despised God, feared men, and dreaded the breaking of an oath. At last one day a thief, pale and groaning from the rack, as the hard wrinkled faces of M. d'Argenson and his myrmidons bent round his bed of torture, and fixed on him their now glittering eyes, to the repeated questions of "Who is your captain?" replied, "*Cartouche*." The secret was disclosed; the bloodhounds leaped forward on the track.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

It is not a little interesting to go from the Royal Academy to the French Exhibition, and contrast the peculiar national characteristics as developed in art. To one's great surprise, it would appear that the attributes of gravity, thoughtful design, and sober colour, were prevalent in France to a far greater extent than in England; that is, presuming we should accept the display in Pall Mall for as precise a representation of the state of French art in the former country as

that in Trafalgar Square is of the latter. But this can hardly be the case; for, notwithstanding the numerous great names the catalogue presents, there are others absent whose possessors are remarkable for practising the very brilliancy which distinguishes the English Exhibition. These deficiencies account for the lack of colour which strikes the visitor the moment of entering, rendering the display so sober in that respect that he might fancy this to be a collection of pictures by the old masters, whose pigments time had dimmed.

The only pictures here that are truly brilliant in colour are those by Meissonier, who is represented by three small works. No. 115, "The Chess-Players," show two men seated in a room deeply engaged in the game. The aerial effect is extraordinary, having all the power and clearness of a stereoscopic view; the expressions are admirable, the colour, although a little hot, is most skilfully managed, and the drawing correct to a marvel. Nos. 116, "A Lansquenet," and 117, "A Mousquetaire," respectively soldiers in the costume of each corps, although not remarkable for character, are extraordinary examples of minuteness and care,—never were these qualities carried to a greater extent; but, after all, we cannot but think such extreme delicacy is wasted on the subjects, and when achieved, the result seems no greater than that which Teniers obtained at one-tenth of the labour and cost. No. 116 has been purchased at the extraordinary sum, considering the subject and size, of eight hundred guineas.

A large picture by Eugène Isabey, No. 90, "The Morning of the Chase," is full of action and character, and, but for its prevailing grayness, reminds the observer of a sketch by Vandyke. Le Poittevin's picture, No. 108a, "Fishermen hauling up a Boat," exhibits a good deal of spirited action, and is an amusing illustration of French character; all the men sitting on the ground to accomplish their nautical feat. No. 110, "Christening a Fishing-Boat at Fécamp," is an interesting example of French manners,—the *curé* blessing the craft which is to bear the fortunes of the family. There is some graceful design in this work; a girl holding two children in her arms being very noticeable for that quality. No. 161, "The Huntsman," by Van Seben, is a vigorous sketch. A large picture, by Duveau, "The Seven Sins," No. 43, will attract attention; it exhibits a revelling party of men and women, who are supposed to be practising the deadly sins. This work resembles in some respects "The Decadence of Italy," by Couture, engraved in this Magazine, but far transcends it in colour, having a peculiar dead glitter of that quality which is in keeping with the subject. There is much coarsely-powerful drawing and good expression shown by the artist in this picture. Couture himself has a work here which is very important and interesting: "The Minstrel," No. 29, a troubadour of the middle ages singing to some of the common people, who are variously affected; the expression of his face, as he keeps up a melancholy chant to his own accompaniment, is very successfully rendered. The picture much resembles in drawing that last described, and is far superior in every respect to "The Decadence of Italy."

This exhibition is very rich in domestic subjects, of which we shall mention the most remarkable. "The Convalescent," No. 155, by Trayer, an old man seated in a chair receiving the affectionate attention of two women, is most interesting in character; the expression of one of the women, whose tender anxiety is perfectly shown by her face, is admirable. The composition of the picture has been most carefully studied. "The Doctor's Visit," No. 136, by A. E. Plassan, is a sort of counterpart to "The Convalescent," and is equally full of truth and expression. Nothing can be more touching than the earnest grief with which a woman seated at the foot of the bed in this picture watches the impassive countenance of the doctor; and the languid dolorous apathy of the patient is perfectly rendered. Not so finished, but very rich in character, are those pictures by Edouard Frère,—Scenes in humble life, Nos. 58 to 63. No. 62, "The Seamstress," a girl sewing at a window, is notable

for *vraisemblance*; No. 63, "The New Doll," may be matched with this. So remarkable for the qualities thus commended are most of the *genre* pictures here, that really our own painters of this class of subject might well study them with advantage; more particularly those above named, wherein the artists have chosen subjects very different from, and far more interesting than the toys with which our exhibitions are overloaded. The pictures by Victor Chavet, Nos. 25 to 28, may almost take a place with those of Meissonier for finish, brilliancy, and characteristic truth; especially No. 25, "The Duet."

The great name of Horace Vernet is represented by a small picture, No. 162, "The Combat," two knights in armour fighting; which, at first displeasing, grows upon the observer by his recognising the truth of touch, the careful drawing, and the vigorous action it exhibits. The even greater name of Ary Scheffer has a place in the catalogue by his "Christ crowned with Thorns," No. 142, which may be called a new reading of the subject. The Redeemer stands disrobed to the waist, and crowned with the sorrowful crown; while a slave holds back some drapery, revealing the dishonour to the mocking bitterness of the tormentors. The whole colour of this picture, although faint and pale, is masterly and good in quality, yet not comparable with many of the artist's better works. The face has an admirable expression of resignation, as of a man overcome with exhaustion; but, we think, needs dignity, and something of the Godlike supremacy of the Saviour.

A portrait of Mademoiselle Rosa Bonheur will be interesting to every admirer of her great picture, "The Horse-Fair," exhibited in this gallery last year. There is one here by Dubufe, No. 40, which is singularly in keeping with what the public know of the lady herself, and not a little characteristic of the vigorous tone which pervades her works. The clear, penetrating, almost masculine head, without a shade of coarseness, and the whole self-dependent and decisive attitude of the figure, allow one to recognise a woman who has, by force of talent and indomitable labour, made for herself a name in the world. Of all Dubufe's portraits we have seen, this is the most striking, being strenuously executed, with so thorough an appreciation of the *physique* to be dealt with, that it will be as valuable as a work of art as it is interesting from its subject. The lady herself is a contributor to this exhibition of two pictures, Nos. 11 and 12. The former, "Denizens of the Highlands," some stots, or dwarf northern cattle, is far in advance in a quality which was almost the only one wanting in "The Horse-Fair,"—truthful imitation of nature. The rough shaggy hide of the beasts is here so faithfully rendered, that almost the only equal to it in our knowledge is the long, silky, opalescent lustre of the "Scapegoat" in Holman Hunt's picture; an odd comparison, doubtless, but one perfectly justifiable. The fierce wilfulness of the brutes' expression, and their little fiery eyes, will strike the observer as perfectly natural. Some poultry, Nos. 9 and 10, by Juliette Bonheur, will be found worthy of observation; and a landscape, "Going to Market," No. 8, by Auguste Bonheur, shows some excellent painting in the French taste.

"The Simoom in the Desert," No. 138, J. F. Portales, represents the fearful scene with great force: some travellers overtaken by the sand-storm crouch in front, others hasten to them, while behind the threatening waft of sand which the deadly wind has lifted up sweeps luridly forward.

Eight landscapes by Emile Lambinet, Nos. 96 to 103, are peculiarly bright and full of clear tone; that is, with the before-mentioned reservation of grayness and dead-colour which so pervades the mass of works here, and, as we have said, marks so wide a distinction between the English and French schools. In other respects, they are carefully and truthfully executed. The celebrated French landscape-painter Constant Troyon has five works here, Nos. 156 to 160; of which No. 159, "Road on the Cliffs near Quimper," has a pearlish pallidity of sunlight effect which is both curious and beautiful.

A SCULPTOR'S PICTORIAL MUSINGS IN ENGLISH POETRY.

NO. I. THE LADY OF SHALOTT.

"*There she weaves by night and day
A magic web, with colours gay.*"

*And moving through a mirror clear,
That hangs before her all the year,
Shadows of the world appear.*

*But in her web she still delights
To weave the mirror's magic sights;*

*For often through the silent nights
A funeral, with plumes and lights,
And music, went to Camelot;
Or when the moon was overhead,
Came two young lovers lately wed:
'I am half sick of shadows,' said
The Lady of Shalott.*

*A bow-shot from her bower-eaves,
He rode between the barley sheaves,
The sun came dazzling through the leaves,
And flamed upon the brazen greaves
Of bold Sir Launcelot.*

*His broad clear brow in sunlight glow'd;
On burnished hooves his war-horse trode:
From underneath his helmet flow'd
His coal-black curls as on he rode,
As he rode down to Camelot.
From the bank and from the river
He flash'd into the crystal mirror,
'Tirra lirra,' by the river,
Sang Sir Launcelot."*

TENNISON.

"The Watering Pool," No. 157, is a striking work. All are excellent. A large landscape, No. 2, by Baudit, "Coast of Normandy," a piece of rough coast-land, is deficient in nothing but colour, being, like many others here, almost monochromatic; how an artist can see so little variety of tint is to us incomprehensible. All the *forms* of shadow are perfectly rendered and effectively painted; but every shadow is of the same colour, irrespective of the angle to the sky which the surface upon which it is thrown makes, and the native colour of such surface itself. The sky in this picture is very truly given, with its heavy masses of flying cloud. "Going to the Fields," by Jules Adolphe Breton, No. 13, is powerfully painted, but black and heavy.

Curiously sustaining the character of weakness of colour, upon which we have commented, are those views in the East, by Theodore C. Frère: Nos. 64 to 69, and others unnamed in the catalogue. Simmering and dusky with intense heat is the atmospheric effect of all of these, and very powerfully is it rendered. Nothing can be more striking

than the lurid haze which fills the air in No. 66, "The Simoom," which is in every respect a most effective sketch. We cannot call these works more than sketches, as, The drawing of every part which has determinate form is, if we can trust all other renderings of the same objects (as "The Colossi at Thebes"), very careless and imperfect; even the chiaro-scuro would be all the better for more consideration.

Three pictures by François Biard are full of character, as his works always are. Students and admirers of French art will find paintings by Phillibert L. Couturier, Duverger, J. Leon Gerome, Theodore Gudin, Guillemin, Louis Loire, Henri Schlesinger, and some miniatures by Madame Herbelin, which altogether form a most interesting exhibition.

The plan (unique in London) which prevails at this exhibition, of occasionally transposing the pictures, and also removing some to make room for fresh arrivals, renders it impossible to supply a criticism which shall be perfectly current with the display at the date of publication. The most remarkable of the novelties is by Mdlle. Rosa Bon-

hour, 12a, entitled "*Bouricairos* crossing the Pyrenees;" these appear to be a class of men who traverse the French and Spanish frontier, acting, scandal says, as contrabandists, but ostensibly as carriers of country produce. They climb the rough mountain-paths with mixed droves of laden mules and asses. The whole picture is full of effect and vigour, and the improvement in execution just referred to is very manifest. One of the men slouches along chanting a monotonous drone—some old legend of the hills, perhaps; his companion lazily rides. The animals huddle together in the narrow path, and are full of characteristic and varied action; the distant snow-covered mountains behind are contrasted with the dark red earth and vivid green of the vegetation of the foreground, while the deep blue sky makes both clear and prominent. This is the most interesting picture by the artist we have seen, and on many grounds we prefer it to the ever-memorable "Horse-Fair."

GREENHILL HALL.

BY MRS. C. CROWE, AUTHOR OF "SUSAN HOPLEY," ETC.
IN SIX CHAPTERS.—CHAP. IV.

THE sun rose bright and clear on the 3d of April 18—. In those good old times April was April, and spring was spring; now, as the French say, *Nous avons changé tout cela*, and they are things that poets sing of; but when the inhabitants of Doncaster exclaimed, "What a beautiful day for Emmeline Larpent's wedding!" not a few hinted that it would perhaps prove true April weather, and that the smiles of the morning might be turned to tears before night.

Weddings are awful things, and if people deliberated as so solemn an occasion seems to demand, I really think there would not be many. But it does not do "to consider these things too seriously;" the world would never move on if we all stopped short in a brown study, weighing the *pros* and *cons* of vital questions. However, there is no danger on this side; nature has provided us with impulses and passions to urge us forward; and it is wonderful, considering how little we look before us, that things are not much worse than they are.

It must be admitted that Emmeline had not erred on the side of too much reflection; but when she woke that morning, and remembered that it was her wedding-day, something like a pang shot through her breast; probably the first she had ever felt in her life. There lay the bridal dress in fascinating array; the title and the carriage would be hers in a few hours, and she would be one of the great ladies of the county, instead of the obscure inhabitant of a country-town. But this husband that she did not know, and that must be taken into the bargain,—there was the dark spot in this splendid panorama; and now that his actual presence impended, and she could not put him aside from her thoughts, she felt quite depressed. If he had been young and handsome; but she knew that he was old and ugly, like the grave papas that sat at the whist-table, whilst she and her companions danced and flirted with their sons.

However, there was no retreating now, even if she had wished it; and probably, had the opportunity been offered her, she would not have availed herself of it. The bridal costume was exceedingly elegant, and there stood the dress-maker who had fashioned it to superintend the toilette. So, on, Emmeline, there's no time to pause! On, on to your destiny, whatever it be!

The ceremony was to be performed at noon, after which Mr. Larpent was to have the honour of entertaining his son-in-law, not at a *déjeuner*, but at a dinner; for at that period of history the world did not dine so late as they do now. The house, therefore, was in a great flurry and bustle, and there was a strong smell of roast mutton and potatoes

as early as half-past eleven; when the bride, in her bridal array, was sitting in the drawing-room waiting for her bridegroom, and her father was superintending the drawing of the corks and the spreading of the table, assisted by a lad hired for the occasion, the lawyer's establishment being but on a humble scale; and Arthur, poor Arthur, who had declined an invitation to the wedding, lending a helping but unwilling hand wherever he was required. At last the door of the room where Emmeline was sitting opened, and Arthur peeped in.

"Alone?" he said, taking a seat beside her. "Every thing is ready now, and your father is gone to dress. I suppose *he* will be here presently, and then I must not speak to you, or even approach you,—never again, Emmeline, never again!" and the poor boy, who had been restraining his feelings all the morning before Mr. Larpent, fairly burst into tears. "You will despise me for crying like a woman,—I know it's very weak,—but O, Emmeline!"

"No I don't," said the girl, crying too; for, being in a very depressed state of spirits, her tears were ready enough. "I'm sure I'm not too happy. Now the time's come, I wish I wasn't going to be married at all. If he's as cross as you say, I shall certainly come back to papa; you see if I don't."

"Sir Theobald Maxwell and Mr. Moneypenny!" cried the extempore footman, suddenly opening the door.

The young people rose in confusion, Emmeline wiping her eyes; whilst Arthur, with an utter want of presence of mind, hastily quitted the room.

"What's that?" asked Sir Theobald, slowly turning round to look after him.

"That is young Lupton," replied Mr. Moneypenny, who was the baronet's agent. "He is in Mr. Larpent's office."

Sir Theobald continued looking at the door for a second or two, and then he turned to Emmeline, who, confused and shy, stood trembling by the sofa from which she had risen.

"I'll go and see where Mr. Larpent is, and if the deed's ready," said Mr. Moneypenny, with a delicate consideration for the bride and bridegroom.

"Is yon laddie son to Mr. Lupton of Greenhill Hall?" inquired the latter.

"Yes, sir," answered Emmeline. His brow was overcast; however, he said no more on the subject, but surveying her from head to foot as a man would look at a horse, he told her she was a braw lassie, and that he had brought her a braw present from London; whereupon he drew a gold chain from his pocket, which awkwardly, with his great heavy hands, he clasped round her fair neck; and then, suiting the action to the word, told her to gie him a buss.

It is not necessary to describe the young lady's feelings on the occasion of this first salute of love; and not being in the habit of controlling their manifestations, she evinced too plainly the disgust it inspired. A quarrel, which might have happily stopped further proceedings, would have probably ensued, but that some friends who were invited to the wedding at that moment arrived, and she, taking advantage of their entering the room, rushed out of it, and flew upstairs to her father.

Mr. Larpent was just finishing his toilet, when his daughter suddenly entered, and flinging herself into his arms, declared that she could not and would not marry Sir Theobald. Here was the dreadful crisis that he secretly dreaded, but had hoped to avoid. Nevertheless, he affected the greatest astonishment and horror; asked her what, in Heaven's name, she meant; if she was gone out of her mind, and if she intended to cover him with eternal disgrace, and make herself the laughing-stock of the whole town. Emmeline answered that she hated him, that she should break her heart, and that she should die. To which her father responded that these were the notions of a silly child; that she would be very happy when she got accustomed to Sir Theobald and knew him a little better; that he had made a handsome settlement upon her, and that, if she took pains to manage him well, she might entirely have her own

way; finally, that to give such mortal offence to the baronet would be the ruin of himself, for he should lose his business and perhaps every body else's; and that to draw back now, when the settlements were all but signed, and the clergyman waiting in the church, was simply impossible. Then he coaxed her and kissed her, entreated her not to disgrace her family, and, taking advantage of his prematurely gray hairs, conjured her not to bring them with sorrow to the grave.

What could a girl of sixteen, with the bridal wreath round her head and the bridal veil over her shoulders, say to all this? With nobody to help her, nobody to advise, nobody to sustain, what could she do but weep? Then he rang the bell, and desired the servant to request Mrs. Money Penny to walk upstairs; and when she came, he committed his daughter to her management, his own presence being urgently required below. Mr. Money Penny was a Glasgow W.S., and the agent for the Glengree property, who, having business about that, and other matters in the south, happened to be upon the spot at this critical period. It would be useless to detail the lady's treatment of her patient, which chiefly consisted in magnifying the greatness and antiquity of the Maxwell family, and, with uplifted hands and eyes, expressing her profound amazement at any body's undervaluing *sic* an honour!

While this scene was acting above, the settlements were produced and read below, Mr. Larpent taking an opportunity of whispering to the baronet that he hoped he would excuse the shyness and timidity of his daughter, who was a mere child, fondly attached to her father, and not unnaturally overcome at the impending separation.

"Now, Emmeline, my love," said Mr. Larpent, hastily opening the door, "you are wanted below to sign the settlements. Wipe your eyes, you silly girl, and come along."

"Stop," cried Mrs. Money Penny; "let me bathe them with a little cold water."

But it was of no use, the hot tears would flow; and, trusting to the apology he had made for her, he hurried his daughter down-stairs, aware that the greatest danger he had to encounter was delay.

"Come, cheer up, Emmeline, there's a good girl; cheer up, for my sake," said Mr. Larpent as he opened the door, and in they went.

Every body advanced and shook hands with the bride, those who really pitied her putting on smiling faces, as well as those who did not; for there were some there who, having daughters of their own, though they loudly condemned Mr. Larpent, were secretly jealous that the chance had not fallen to them. They congratulated her, and remarked how pretty her dress was; then whispered to each other that she had been crying, adding, "that it was no wonder." In the meanwhile Mr. Larpent led Emmeline up to the table, put a pen in her hand, and pointing with his finger to a pencil-mark on the parchment, told her to sign her name there. Without raising her eyes, only wiping away the tears that blinded them, she obeyed.

"Now, if you please, Sir Theobald, the carriages are at the door, I believe; I'll take my daughter." And he hurried her down-stairs and into the carriage, Sir Theobald following with Mrs. Money Penny.

Emmeline never said a word, but wept on in silence; whilst her father expostulated and consoled by turns, assuring her that she would be very happy by and by, and that whilst she was crying her eyes out on her wedding-day all the girls in the place were ready to do the same with envy at her good luck. Emmeline made no further remonstrance, —she felt the time for it was past,—and passively she submitted to be handed out of the carriage and led up the aisle to the altar, and passively she underwent the ceremony that made her Sir Theobald Maxwell's wife. She never raised her head, and appeared more like a nun taking the veil than a bride. She returned alone with her husband; and people who stood in the street, watching the procession, observed that she sat in a corner of the carriage with her

handkerchief to her eyes, and that Sir Theobald was not seen to speak to her.

The moment the carriage stopped at her father's house and the door was opened, she jumped out, and rushed upstairs to her own bedroom. Her thoughts were desperate. A child who had never known sorrow, who was utterly ignorant of life as it is, who had never reflected and never been taught to reflect, who had lived upon the surface of things, and had not once lifted a corner of the veil to see what was beneath,—now, suddenly her eyes were opened, the veil was lifted, and she saw deep down into that dark cavern of woe into which she was sinking. If she had had laudanum she would have swallowed it then. She looked round the room for some means of speedy death; there was only the window; she threw it up, and measured the height with a glance, but her courage failed her. Many a woman could put a vial of laudanum to her lips who could not dare such a leap. Then the sun shone, the early flowers glittered in his beams, and a blackbird perched on a spray was singing a sweet strain to his mate hatching her eggs hard by. It was hard to leave such a smiling world, to go "into cold obstruction and to rot;" her heart softened, and she fell on her knees by the bedside and prayed to God to help her.

Presently her father missed her, and becoming alarmed, he ascended to her bedroom. She promised him, if he would give her a few minutes, she would come down when summoned to dinner, and try to behave herself better; and she exerted herself to keep her word. Her eyes were cast down and swollen with weeping; her cheek was pale; she only answered in monosyllables when spoken to; but she laboured hard to suppress her tears and to give no further offence. The dinner was tedious: they drank toasts; and when the healths of the bride and bridegroom were given, Mr. Money Penny made a long speech, in which he dilated largely on the beauties of Scotland, and the peculiar qualities with which it has pleased Providence to endow its people, giving them thereby an evident superiority over other nations; for "weel ye ken," he said, "whar a Scotsman is h'll thrive." Then he entered at length into the history of Glengree, and the antiquity and merits of the Maxwell family in general, concluding with a glowing eulogium on Sir Theobald in particular.

As the baronet—either because he was out of temper, which he certainly looked, or because, as some of the company who had heard him at public meetings suggested, "he was no dab at a speech"—showed no intention of acknowledging this eloquent oration, but sat silently and moodily sipping the toddy that had been carefully provided for him and Mr. Money Penny, Mr. Larpent himself rose; and, after welcoming every body, and thanking every body, and saying it was the proudest day of his life, and expatiating on his own insignificance and the unexpected honour of forming an alliance with the ancient and distinguished family of Glengree, he took occasion to hint jocularly that, since it was the month of April, showers must be expected; that they were natural to the season; and he hoped he was not going too far in saying that they were becoming to the season; ay, and he would say beneficial,—he was going to say, *to the season*; but he saw he was losing sight of his metaphor, and he repeated, "ay, beneficial, I say;" and then, thumping his breast in a significant manner, added, "and shows that all's right here."

The company applauded with their voices and their glasses; and then the ladies rose, and left the gentlemen to their potations. In the drawing-room, Mrs. Money Penny, who was a great talker, entertained the ladies with various anecdotes of the Glengree family and their "forbears;" whilst Emmeline took an early opportunity of slipping out of the room. Since Arthur's hasty disappearance from the drawing-room, she had not seen him. He had been invited to make one of the wedding-party, but he was unequal to the ordeal; and Mr. Larpent was not sorry, for he felt that it would be more prudent to confine his invitations to a few of his elderly friends,—those amongst them whose worldly

position was the most advantageous,—and avoid the unfavourable comparisons that might be suggested by the proximity of youth and good looks.

Emmeline had wept out her tears; the sluices were dry now; but the hard fixed despair was upon her, and the imminence of death was so present to her,—she that had never before remembered she was mortal,—that she felt as a nun must have felt of old when summoned to walk into her living tomb. What manner of death it was to be she knew not; but life was impossible, the future a blank; die she must.

But she wished to see Arthur before she was entombed; her heart yearned to the one friend that pitied and would have saved her. She understood all his hints, all his warnings now; she could not go without bidding him farewell. She thought he would be in the office, and he was; he had been shut up there ever since the sudden arrival of Sir Theobald; and from the window he had watched her when she was handed into the carriage to go to church, and when she returned.

"Arthur," she said, as she opened the door, "I am come to say good-by."

Her voice was low and solemn, her face white as a corpse, as she held out her hand to him.

"Emmeline," he said,—"O God!—Emmeline, you'll die;" and he fell on his knees before her as he seized her hand.

"Yes, Arthur," she said, "yes, I shall die; that's why I came to take leave of you;" then, with a wild smile, she added, "Don't go on your knees to me, sir, I am Lady Maxwell."

She laughed hysterically; and her nerves being utterly unstrung, having once begun, she could not stop, but went on laughing and crying till the walls resounded with the echo. The sound of her voice reaching the company above stairs and below, they naturally rushed to the spot to see what was the matter.

Arthur had placed her in a chair, and, quite oblivious of every thing but the situation in which he saw her, was again on his knees, passionately kissing her hands, and conjuring her to calm herself.

"I'll fetch Mr. Larpent," he said; "he can never have the heart to condemn you to this misery. Something must be done."

At that moment the door opened, and the father, the husband, and the whole of the guests, followed by the servants, entered the room.

Mr. Moneybags rushed to the window, and pulled down the blind; for he saw that a crowd was assembling in the street. Arthur, confused and frightened, slunk out of the room in an agony of grief, conscious that appearances were much against them; and, while Mr. Larpent and the ladies called for cold water and hartshorn, and busied themselves about the bride, Sir Theobald stood silently by, sternly surveying the scene. One of the ladies now recommended that the gentlemen should retire, and leave them alone with the patient. This advice was followed; and in due time their assiduous ministrations were rewarded with success, and Emmeline was restored to her previous state of passive suffering, an occasional irrepressible sob alone testifying to the spasm that was past.

During this interval, the post-horses, which had been previously ordered, had trotted up to the door, and wheeled round their heads towards the road that led to the Grange; behind them was, not the carriage with armorial bearings which had dazzled poor Emmeline's girlish imagination, but a postchaise from the Bull. Sir Theobald had an old chariot in his coach-house, which the late Lady Maxwell used when she came to Doncaster to shop; but it was out of repair, and his new wife never having been accustomed to such a luxury, he did not think it necessary to replace it. However, chariot or chaise were alike to Emmeline now.

Mr. Larpent came down, and said that all was ready. The ladies bustled about the bride, attended her to her room, bathed her face once more, arranged her disturbed toilet,

threw a shawl over her shoulders, and hurried her down-stairs. Sir Theobald and the gentlemen were waiting below. Every body shook hands and said good-by, her father embraced her and handed her into the carriage, the bridegroom stopped in after her, the door was clapped to, the postboy smacked his whip, and away they drove, with a crowd cheering them, and expecting a gratuity, which they did not get. Every window in the town was occupied with eager faces, but curiosity remained ungratified; for they had not got many paces from the door, when Sir Theobald was observed abruptly to pull down the blinds.

This was the last that was seen of them, but they left their characters behind them; and from kitchen to garret, Miss Emmy Larpent and Sir Theobald Maxwell, and what sort of *ménage* they would make of it, were the subjects that chiefly engrossed conversation. The old women cried, "God help her!" and the young ones remarked, that to drive off on her wedding-day in that old postchaise "must have let her ladyship's pride down a peg or two."

NEWSPAPERS IN INDIA.

WHEREVER the Anglo-Saxons go, they deem it incumbent to set up a newspaper, whether there be any special necessity for it or not. Indeed, very often, it is not so much the news which produces the paper as it is the paper which produces the news. They do not feel that they are doing their duty to themselves and to the universe unless they have one of those "instruments of civilisation." Then, whenever one journal is set up, an opposition journal rises to denounce it. A solitary newspaper, monarch of all it surveys, is a curiosity seldom found. Adventurous travellers have met with it; but the generality of mankind must take its existence on trust. "There is a pleasure in the pathless woods;" but what is that to the pleasure of editing the *Teheran Gazette*, which has no rival within a thousand miles? But is the editor of it a happy man? Must he not rather wither in his awful solitude?

This mania for having newspapers may be seen in all our colonies and in the United States of America. We even insist on sharing our advantages with men under our rule, but speaking strange tongues, who, if left to themselves, would not trouble their heads about newspapers for some time at least. Of the Maltese papers, half the columns are in English, half in Italian; and the English reader turns away from the *Avviso interessante* with a distinct feeling that he pays for that also, but that he must make the sacrifice for the spread of intelligence. Spanish finds an entrance into the little paperkins of Gibraltar. Columns of heavy Dutch alternate with columns of English in the journals of South Africa. In Canada we have French and English. And in India, no sooner is an English paper set up, than some enterprising native clerk or compositor starts a small edition of it in some Eastern language.

The English in India are not considered to be a particularly active "go-a-head" people, yet the press prospers among them. Calcutta has about five or six English dailies, and even Bombay, where the European population numbers only a few thousands, has no less than three. Nor are these papers cheap, like those of America. Half a rupee, or about one shilling of our currency, is the usual price for a single number, and the annual subscription for a daily paper is about 6*l.* exclusive of postage. Advertisements are charged at a moderate rate, and the circulation of all the papers is very limited, so that it is necessary to charge the subscribers heavily. The *Friend of India*, a weekly paper published at Serampore near Calcutta, is thought to have the largest circulation of any Eastern journal, and a short time ago, at least, it only printed about two thousand copies. No Calcutta paper sells more than a thousand, while in Bombay six or seven hundred may be set down as the maximum; if we except the *Overland Summary* of the *Bombay Times*, which is sent to a large number of readers in England.

Few of the papers out of the presidencies have a good circulation, except the *Mofussilite* and the *Delhi Gazette*; but somehow they contrive, not only to prolong their own existence, but also to provoke the birth of opposition journals. The intelligent reader will believe us when we assert that half of the newspaper property, all over the world, does not pay. It is not for profit alone that the press is kept working. Moreover, nothing dies so hard as a newspaper: however low it may be sunk, there is always some infatuated person to be found who believes that he can make it pay, or that it is worth his while to keep it up to serve his own purposes.

Anglo-Indian society has a pleasant tone, and much ease about it. The constant changes, which are unfavourable to the formation of close friendships, have the effect of making mere acquaintanceship a much more cordial relation than it is in this country. There is, except in the very large towns, no class of Europeans except those who are admitted into society; and every man's income is pretty well known. Newspapers having such subscribers, and in such small communities, might naturally be expected to be of rather high character; but in India, unfortunately, such is not altogether the case. In certain respects the papers there are superior to those in England, and their tone is steadily improving; yet, still a large number of them indulge in the grossest personalities, and have little respect to truth in their attacks upon individuals. It might weary our readers to enter into the causes of this state of matters. They will readily understand that it arises in part from the gossiping tendencies of small communities, the necessity of strong excitement in that enfeebling climate, and the difficulty of obtaining editors other than men of adventurous and reckless spirit, who have small respect for either the moralities or the amenities of life. Moreover, when the press first obtained independent position in that portion of the globe, Indian officialdom was undoubtedly in a very corrupt state, and attacks upon it in general were quite thrown away. It was necessary, though a very disagreeable business, to single out individuals, to narrate their actions, expose their character, and, in a word, make an example of them for the benefit of others. Naturally, the persons so sacrificed did not undergo the process very quietly; and, being themselves trammelled by their official position, had recourse to the expedient of setting up, or at least employing other journals to blacken the characters of the more honest and independent of the editors. One unfortunate effort of this was to cast a certain discredit over all the statements of the press, and another was increased straightforward violence of speech. An independent honest editor had to put up with a great deal of abuse; and the hardest thing of all was the publication of entirely fabulous accounts of his character and history. "Our notorious rather than respectable contemporary," one opponent would write, "appears, from the character of his late articles, to have had recourse to even more than his ordinary use, or (shall we say?) *abuse* of the dram-bottle." "That infamous blackguard," another would break out, "who edits the *Bopaulgurh Gazette*, who has been repeatedly kicked out of decent society, and who, before his arrival in this country, was flogged out of two European armies,—he, we say, has had the unparalleled audacity to apply language to this paper of the most libellous kind. Of course it would be beneath us to dream of condescending to take him before the Supreme Court. Our subscribers, who comprise the respectability and intelligence of the entire presidency, know what value is to be attached to his statements, and will readily give credit to our assertion, that only a desire to maintain the purity and dignity of the press has influenced our remarks on this nauseous subject." As if such attacks were not enough, the unfortunate editor would find himself appearing in the local intelligence thus: "The dead body of the wife of a Hindu merchant was found a few days ago at the bottom of a well at Chinch-pooglia. On examination it was found that the woman had been stripped of her ornaments, and that her hands had been

secured behind her back; so that there could be no doubt that this was *not* one of those cases of suicide which are so lamentably common. Immediately on being informed of the circumstances by the police-peons, our active inspector began to institute a searching inquiry. Of the probable results of that inquiry it would be premature to speak; but we have been sorry to hear the name of Mr. A. B., editor of one of our local prints, mixed up with the affair; not exactly as principal in it, but still in a way certain to lower European character in the eyes of the natives, and to lessen the influence in India of Christian England." This style of controversy has not yet entirely passed away, and some of its most violent instances belong to late years. Less than three years ago, the editor of a Bombay paper printed and posted up bills, denouncing one of his contemporaries as an "infamous liar;" but the proceeding excited only disgust, and had a good influence in promoting a reaction against that style of controversy. Some papers still retain their bad pre-eminence, being unable to keep up even their small circulation by legitimate means; but they are rapidly going down, while their place is being supplied by more respectable and conscientious journals.

Let it not be imagined, however, that Indian newspapers are in all respects inferior to their contemporaries in England. On the contrary, their editorial columns display more variety, spirit, and originality than do the lucubrations of English editors. So far from being limited in the range of subjects, there is nothing in heaven or earth on which an Eastern editor would scruple to write an article. British politics do not excite much interest; local subjects of importance are rare; and so a large number of the articles must be devoted to subjects of intrinsic, and not of mere temporary or factitious interest. This want of a definite line of subject often results in amusing extravagancies, as dissertations on philosophical problems, or on Hindu mythology, and hot arguments in the China papers on the exact meaning of the Hebrew word *Jehovah*, as bearing on the translation of the Scriptures into Chinese; but, on the other hand, it allows the free use of interesting material taken from the literature, history, and statistics of all countries. Each editor, having chiefly himself to depend on for contributions, gives play to his own individuality; and so, if he has any strength of mind, geniality, or humour, forms, to a certain extent, the taste of his readers. The dullest writing in the world, is that written with a view to suit fancied opinions and feelings of the public. The merest dullard—Pepys, an English clown, or a Hindu coolie—becomes instructive and amusing when he really speaks out his own thoughts and feelings, giving us *his* view of the universe and of his relation to it; for when he does so, he keeps within the limits of his own judgment and experience. Very high qualities, possessed by few, being required to perceive the structural action of the mind of a mass of men, most deliberate attempts at suiting the public taste are just more or less successful failures; such success as they sometimes do obtain being in no way necessarily connected with their deliberate aim. Hardly one in a thousand of the articles which appear in English papers could find readers six weeks after its publication; while a considerable proportion of those which appear in the Indian journals could bear reading years after their first appearance. The one class of articles presents the latest items of interesting news as judged of by the floating sentiment of the day,—which sentiment is too often false,—and that with but little regard to those general principles into which knowledge must run for its own preservation, or to those deep feelings which give knowledge its chief interest; the other pay more regard to lasting interests, and are compelled to do so by the feebleness of the excitement caused by more transitory themes; not that many newspaper articles in any clime are of a superior class. All we remark is, that such frequently appear in the journals of India; while hardly by any chance do they ever do so in those of England, however superior the latter may be in collection of news and dead level of style.

After leaving Malta, the traveller will meet with no indigenous paper until he reaches Bombay; for though Mohammed Ali determined to start a newspaper as an instrument of civilisation, and actually docked the salaries of the officials in order to support it, the first number of that paper never appeared; and there is no prospect as yet either of its appearing or of the salaries being restored to their former integrity. Sailing down the Red Sea, past the shores of the Hejjaz, he may perhaps remember the name of the *Mecca Gazette*, a journal which is supposed to review the writings of Mr. Thomas Carlyle with great severity; but he will find to his astonishment that it is not published at the Holy City. As we have mentioned, he will meet in Bombay with three dailies, and the *Bombay Times* will be the only one of them not a stranger to him. This paper was started by some Bombay merchants in 1838, and in 1840 was committed to the editorship of Dr. Buist, who has acquired some celebrity as a scientific man. It gained considerable notoriety by its disapproval of the Afghan war, and by its attacks on the conduct of Sir Charles Napier in Sind. Up to 1847 its circulation and influence stood high; but from that year began to decline. It is one of the few Indian papers which are known in this country; but on its own peculiar territory it has been distanced by the *Bombay Gazette*, which, under the proprietorship and vigorous editorship of Mr. John Connor, gained a remarkable reputation. This gentleman had the boldness to take up an entirely independent position, to treat subjects on considerations of abstract right, and to assail and ridicule individuals of the highest position. Consequently he brought down upon himself, and upon his paper, an amount of abuse quite unparalleled, and more than sufficient to frighten timid respectability. Only the just penetration which his judgments usually evinced could have enabled him to struggle through, and finally obtain the reputation of being "an upright able public writer, and a large-hearted friend." To his efforts were owing the removal of two Sudder judges, who had obtained an evil notoriety, and also an increased feeling of honour and responsibility among all classes of Government officials. Of the other Bombay daily we need only say, that the editor is a man of the Bennett stamp, and makes the *New York Herald* his ignoble model.

Passing to Calcutta, we find in the *Englishman* a paper somewhat resembling the *Bombay Gazette*, but with rather less scrupulosity and a greater disposition to find fault with the Government of India. Its editor, Mr. Hurry, writes with great point and cleverness, and appears to command all intelligence in reference to the follies and slips of individuals. Many things which are done in secret find their way into the columns of his paper, and make it a great favourite at the messes of the Bengal presidency, and of the north-west provinces. The *Hurkaru* is the very opposite of the *Englishman*, being extremely decorous and inclined to support the Government. Its reputation as a Government organ, however, is not so great as that of the *Friend of India*, which is published weekly at Serampore. This paper was originally started as a missionary organ, from a press superintended by the celebrated Dr. Marshman; but under the management of his son, Mr. John Marshman, it became a secular journal devoted to the discussion of Indian politics and statistics. Rarely or never containing anything brilliant, and it commands a good position from the access which its editors have to the records of Government, and from the fact that the interesting material of many of its articles is contributed by members of the Civil Service, who have peculiar advantages for collecting valuable information. The other three Calcutta dailies are not very important, and the weeklies are for the most part issued from the same presses. Some of the papers, edited by natives, and specially addressed to natives, are published in English, of a peculiar kind, and convey the notion that Young India is a genial but rather foolish fellow.

In Madras, the *Athenaeum* has won its reputation by exposing the defects and errors of the rule of the East India

Company; but it pushes English theoretical notions of government to excess. Some of the papers published in the north-west provinces and the Punjab are of high character. At Agra, the *Mofussilite* was distinguished for more cleverness than character. Latterly it has obtained a higher standing under the editorship of Mr. Blanchard, a son of the late Laman Blanchard, who makes it very entertaining by his squibs and clever articles, but is more cautious and decent than his predecessor was. The *Delhi Gazette* is also largely circulated, chiefly on account of its abundance of news, having even correspondents in Afghanistan. We have before us a little lithographed sheet, with the figure of a Sindian on a camel, by way of heading, which was started in Sind shortly after Napier's conquest of that province, and was edited at one time by Captain Burton, who has since so greatly distinguished himself as a traveller in Arabia and Africa. This lithograph was supplanted a few years ago by two printed papers, the *Sindian* and the *Sinde Kossid*, which contrive to sustain their existence on the very outskirts of civilisation. There are many more journals scattered over India, and new ones are yearly springing up. The evident tendency of the newspaper press of India is to become more English in tone, to take a greater interest in English politics and literature; but still its general character remains very different from that of the English Press.

SINDBAD.

POLYGLOT READINGS IN PROVERBS.

MARRY IN HASTE AND REPENT AT LEISURE.—It happens too often that "Wedlock rides in the saddle, and repentance on the croupe" (French),—*Fiançailles vont en selle, et repentailles en croupe*. "Marriage is a desperate thing," says Selden: "the frogs in Æsop were extremely wise; they had a great mind to some water, but they would not leap into the well, because they could not get out again."

W. K. KELLY.

VENTILATION: ITS VITAL IMPORTANCE AND EFFICIENT APPLICATION.

[Completed from p. 272.]

But "since the ventilators were introduced, three years ago, not a single instance has occurred." In another weaving shed, "though various means of ventilation had been tried, there were fully five per cent on the sick-club list, in consequence of inhaling the hot and impure atmosphere; but since Mr. Watson's method has been adopted, there has not been a single case." One member of a firm that has extensively introduced the ventilators, remarks, "Were the question one only of expense, and not of humanity, I believe we shall soon be repaid in the improved health and strength of our work-people."

Domestic animals, like man himself, have profited by the introduction of this system of ventilation, in the recovery and improvement of health, and in the exemption from many diseases to which they are liable from close confinement. The premature blindness to which the horse is subject, and which is said to be occasioned by the ammoniacal gas that is always abundant in stables, may be greatly alleviated, or altogether prevented, by proper ventilation.

In stoves or rooms for the drying of cloth, white-lead, wool, paper, &c., and fancy leather dressing-stoves, &c., not

only is a saving of time and fuel effected, but a great improvement in the colour and softness of various kinds of goods. In warehouses, drapers' shops, &c., "the heavy smell of the goods has given place to bracing sweet air, while the moisture that used to collect on the glass, at the risk of damaging the goods, is entirely prevented."

When applied to gentlemen's residences, all smells of cooking, the effluvia from gas, water-closets, and bedrooms, are entirely removed, and the air throughout the whole house is sweet, pure, and bracing.

In hospitals it has been found to be invaluable, as experienced at Wakefield, and at Benrhydding, near Otley, Yorkshire, where perfect freedom from smells, without draught, attests the efficiency of the ventilation, and promotes the recovery of the afflicted.

At Westminster Chapel (the Rev. Samuel Martin's), and at the Royal Academy of Arts, Trafalgar Square, London, visitors may perceive that Watson's Ventilators keep these large and crowded buildings cool and sweet and refreshing during the hot days of summer, without any perceptible draught.

But perhaps the greatest feat yet accomplished by Mr. Watson's "spontaneous double currents" is that of the complete ventilation of emigrant-vessels, an object that has hitherto been attained but very imperfectly, and only by unremitting attention on the part of the commander and his officers.

The condition of our seamen in maritime expeditions undertaken about a century ago affords a striking illustration of the evils resulting from a protracted sojourn in ill-ventilated apartments, and shows also that these evils are the more aggravated when their origin is not rightly understood. Anson set sail from England on the 13th September 1740, in the *Centurion*, of 60 guns and 400 men; accompanied by the *Gloucester*, of 50 guns and 300 men; the *Pearl*, of 40 guns and 250 men; the *Wager*, of 28 guns and 160 men; the *Tryal* sloop, of 8 guns and 100 men; and two victuallers, one of 400 and the other of 200 tons. They had a long run to Madeira, and thence to the coast of Brazil, where they arrived on the 18th December; but by this time, though they had suffered no privations, or unusual hardships, except from contrary winds, the crew were remarkably sickly; so that many died, and great numbers were confined to their hammocks. The commodore now ordered six air-scuttles to be cut in each ship, to admit more air between decks; but such was the prevalence of disease, that on arriving at St. Catherine's, 80 patients were sent ashore from the *Centurion* alone, of whom 28 soon died; and the number of sick soon increased to 90. After a stormy and tedious navigation of three months round Cape Horn, scurvy carried off 43 more, in the month of April, and double that number in May, 1741. Those who remained alive now became more dispirited and melancholy than ever, and the mortality increased to a frightful extent. On 9th June, when in sight of Juan Fernandez, the debility of the people was so great, that 200 being already dead, the lieutenant could muster only two quartermasters and six foremast men able for duty in the middle watch, to such a condition was a crew of 400 men reduced in the course of a few months. The commodore's attention was now devoted to getting the sick on shore, as they were dying fast on board, "the distemper being doubtless considerably augmented by the stench and filthiness in which they lay; for few could be spared to look after them, which rendered the ship extremely loathsome between decks." Within a year, out of upwards of 1200 men, composing the crews of the squadron that had sailed from England, only 335 remained alive. The fate of the Spanish squadron which sailed nearly at the same time, was still more horrible. The *Esperanza*, of 50 guns, lost 392 out of 450 men, and the other ships almost as large a proportion.

That these sufferings were occasioned chiefly by deficient ventilation is clearly evinced by the improved condition of the seamen in the expeditions of Cook and other

commanders. By the admirable care and unwearied watchfulness on the part of this able navigator, the *Resolution* performed a voyage of three years and eighteen days, through all climates, from 52° N. to 71° S., with the loss of only one man by disease out of 112. This exemption from sickness is attributed by Dr. Kippis, in his *Life of Cook*, "to the salutary effects of certain articles of provision, and especially to the frequent airings and sweetenings of the ships."

The maladies to which the crews of Anson's squadron were subjected would seem to have drawn the attention of the scientific men of that period to ventilation as a means of preventing the recurrence of such calamities. Samuel Sutton, in 1749, proposed a plan for ventilating ships by leading tubes from the parts of the vessel requiring to be ventilated, to the ash-pit of the galley-fire, that the draught might carry off the foul air. This method, though it can scarcely be said to have ever been adopted on board ship, has occasionally, under favourable circumstances, been employed with considerable effect. Dr. Desaguliers proposed a modification of his fan-wheel. Dr. Hales invented a machine, which in its construction and action resembled a pair of bellows of a clumsy kind, and which he termed the "ship's lungs." This apparatus was at first extensively introduced in ships, public buildings, &c., but was soon abandoned, chiefly on account of the cost in labour to work it. Dr. Arnott has made several improvements on this pump, by which a great saving of labour has been effected. This mode of ventilation, however, has the great disadvantage of requiring constant attendance, and there is reason to fear that when the working of the machinery is left entirely to the judgment or the caprice of inexperienced persons, the duty will too often be imperfectly performed, and that, in some cases, during stormy weather, when ventilation is most required, it may be altogether neglected.

Windsails are often applied in fine weather, but they cause a very strong and injurious draught. To insure the greatest amount of benefit, it is obvious, that the ventilators must be *self-acting*, and capable of effecting the desired purpose with unerring certainty, in all states of the weather.

In these respects, the ventilators furnished to emigrant-vessels by Mr. Watson, have been found eminently serviceable; maintaining, in all latitudes, the purity and salubrity of the atmosphere, even though in some instances the passengers have been kept under close hatches for several days. The opinion of those, who, from their experience and scientific knowledge, are best qualified to judge, has uniformly been expressed in favour of this system of ventilation. The surgeon-superintendent of the ship *John and Lucy*, that on her last voyage to Geelong carried out 400 passengers, *eight of whom were born on the passage*, makes the following remarks in a report to the Land and Emigration Commissioners:

"The atmosphere in the 'tween-decks, whether in a breeze or in a calm, was perfectly pure; . . . the ventilated current was diffused throughout the different apartments of the ship. Whether the skylights, stern-ports, or scuttles were closed, the current of air was as pure as when open. The only perceptible difference in the range of the thermometer was in the immediate locality of the ventilator. The passengers berthed under the poop were ventilated by three air-holes, at the suggestion of Captain S. These, in fine weather, were found insufficient; and in consequence of complaints of the impure state of the air, I had affixed perpendicular pieces of wood to them, which was a modification of the patent ventilator. This gave immediate satisfaction, and the emigrants were most thankful. I would observe, that I had no sickness to contend with on board the *John and Lucy*, which I in a great measure attribute to Mr. Watson's admirable scheme of ventilation, by the adoption of which the comfort and health of the passengers had been in every way promoted."

If applied to ships freighted with coolie emigrants, the mortality so frequently brought under public notice would cease. If to ships freighted with sugar and fruit, the constant withdrawal of the heat and moisture would permit of the cargoes being discharged in a dry and more valuable condition. If to ships freighted with cargoes that cause

spontaneous combustion, the constant discharge of the dangerous gases would effect a great saving of property and life.

The steam navy of the world is rapidly increasing; and to the stokers and engineers of these vessels, Watson's Ventilators would be an invaluable boon. In warm latitudes the rains are very heavy and of long continuance; when the present openings are closed to keep out the rain, and in rough weather, the sea-water, the heat at the furnaces and in the engine-room is most debilitating; only a few years is sufficient to unfit the stoker for further service. In warm latitudes, and with little wind, the heat at the furnaces is almost unendurable, and then it is difficult, with extra fuel, to keep up the steam. With the patent Ventilators, the sickly, steamy, and oily smell that usually pervades steamships is now replaced by a pure, cool, and invigorating atmosphere; and this will be enjoyed in all latitudes, and in all states of the weather, without rain or sea-water being admitted by the ventilators or other openings. The steam also will be kept up with less fuel and greater ease.

The *Niagara* United States steam-frigate is so badly ventilated that the smell between decks in the morning is most offensive.

In the *Lancet* of May 30th last, it is reported that Watson's Ventilators were applied to the fever-hospitals at Sinope during the late war, and so successfully, that fever which was thought to be malignant soon disappeared with good ventilation and cleanliness. The most of the fever cases originated in ill-ventilated ships of the Turks.

As the introduction of great improvements almost invariably meets with opposition from an ignorant prejudice on the one hand, and from unscrupulous plagiarism on the other, Mr. Watson's invention has not been altogether exempted from such attacks. While some, discrediting even the testimony of their own senses, would not admit that any current was produced by the ventilators, because, as they alleged, the action could not be accounted for by any satisfactory theory; others, more clear sighted, perceived at once the marketable value of the invention, and by the exercise of a little ingenuity brought out modifications of this system, which they passed off as original. To the former of these, if still sceptical on the subject, we would recommend the perusal of a paper read before the Royal Society a few months ago by Dr. Chowne, in which he demonstrates from the results of a series of experiments, conducted with extraordinary care, that when a tube open at both ends is placed in a vertical position, every precaution being taken to exclude all extraneous causes of movement in the surrounding atmosphere, an upward current of air is almost immediately established, and continued so long as these conditions are maintained. As Dr. Chowne, however, "leaves the explanation of these phenomena to those who are more accustomed to deal with similar researches," the want of a *theory* may still, we are afraid, be urged as an insuperable objection. With regard to the latter class of opponents, we have no hesitation in stating our opinion, that their various modifications of Mr. Watson's system, so far from being improvements, only render the apparatus more complicated and expensive, without in any degree increasing its efficiency. All controversy with these parties, however, we leave to Mr. Watson himself, trusting that the specifications of his patent are sufficiently clear to protect him against any piratical encroachment on his invention.

SELF-ACTING INDICATOR BEE-STAND.

NUMEROUS as are the contrivances for facilitating the study of the honey-bee, we have not one which enables the bee-keeper to note the daily progress of a colony in the accumulation of a store. To know the weight of a hive, we must bring out a tripod and steelyard, and move the hive from its site; and even then we cannot judge accurately as to daily or weekly progress; in fact, we only learn the gross weight when we weigh it, and compare one weighing with another. In order to judge of what has been accomplished in the interim, I have lately thought of a plan by which the daily, even hourly progress of a hive may be known, by a self-acting

apparatus of most simple construction; and as this is the time to determine whether a new appliance shall be tried or not, I venture to submit my plan to your aparian readers. If I wait till I have put it into practice, the communication may appear too late to be of use to others during the present season.

Construct a pedestal for a hive on the plan represented in the diagram. Let it be formed telescope fashion: a turned pillar, A, working in the manner of a piston inside a brass or copper cylinder, B. Inside B, and beneath the pillar A, is a spiral spring of brass or steel; and on this spring the pillar A presses, more or less, according to the weight superincumbent upon it. In the front of the cylinder B are two open slits, and between them an index, marked in accordance with the strength of the spring. The right-hand slit is simply a groove, in which a finger, c, works freely up and down, when moved by the hand, and a screw fixes it wherever it may be required to remain. The finger d is attached to the base of the pillar A, and the slit in which it works is quite open; so that as A presses down the spiral spring the finger d marks the gross weight of hive, hive-board, sufers, bees, and honey. At e, a thumbscrew passes through the rim of the cylinder B, to press against the pillar A, and retain it in its position. This is to prevent any jerking upward of the hive on the removal of a cap or sufer.

The use of the contrivance can need but little explaining. The hive, with its swarm and floor-board, is placed on the pillar, and its gross weight is immediately marked by the finger d. Suppose the gross weight on the afternoon of the swarm being hived to be 10 lbs., fix the finger c at 10 lbs., and the finger d will the next evening show the actual amount of work accomplished in the formation of comb, &c. If a sufer is put on, let the additional weight noted by d be added to the former weight of the hive, as indicated by c; so that whenever you desire to know the total weight of the contents, you have but to deduct the weight registered by c from that indicated by d, and the product is the answer required.

By such a plan we might compare hives, swarms, and localities with each other, the index showing the daily, even hourly progress of each. The effect of a few fine days in May would be pleasingly evident; and it is likely enough that, with the help afforded by the thermometer, the time for putting on sufers, or opening the partitions in collateral boxes would be very definitely noted. But such, and other uses that may arise, I leave to the consideration of those who may care to adopt my invention.

SHIRLEY HIBBERD, Tottenham.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XVI.

PAINTED BY J. C. HORSLEY, A.R.A.

HIDE AND SEEK.

HIDE AND SEEK.

By J. C. HORSLEY, A.R.A.

THE gallant before us has come out in this summer's afternoon, ostensibly for musical recreation, but, as we may surmise, really in order to obtain a sight of the lady of his love; who herself, by that strange instinct, or rather fortune, which guides lovers to a meeting, also ventures on a promenade with a fair cousin, for such we surmise the second lady to be. Hearing footsteps, and dreading discovery, he hastily conceals himself behind one of the huge elms which form an avenue in her father's park, and lead down, through sunlight and shadow, directly to the ancient manorial house itself.

The impertinent little dog, detecting the stranger, and not daunted by his menaces, calls attention, with canine pertinacity, to the intruder. Some glimpses of his gay garments half solve the mystery to the damsels, who cautiously, and yet half-amusedly, approach the troubadour's hiding-place, evidently not without suspicion of the precise character of the individual.

Far down the varied avenue is the stately lady of the manor, attended by gorgeous footmen, whose yellow liveries glitter in the sun till one might almost take them for huge canary-birds. Grandly she has paced through the great hall, out by the great porch; servitors bowing before her, complacently she looks round upon the broad lands, the old manorial demesne, and with ancient dignity comes a few steps down the noble avenue, planted before *she* was a girl, now little dreaming who stands within its shade. (Something tells us that she would not be precisely pleased, if aware of the gay youth's presence, and its object.) The barking of the dog, borne to her by the lazy summer-breeze, gives notice of something unusual under the great boughs, so she peers out with the utmost power of her aged-eyes, shading them with the ring-laden and trembling hand from the glare of the sun, which, although the hour is late in the afternoon, has not sunk so low in this pride of summer as to disperse the shadows that cling about the tree-trunks, and check the sward with diamond spaces of dark and light.

Doubtless she is too far off to discern the true cause of the alarm; and by the time of her nearer approach, the involuntary game of "hide and seek" will have terminated by a meeting of the lovers. Short interview there will be; for, aged as the lady is, yet even her weak steps will traverse the avenue long before half the sweet things are said, which he has couched over hour by hour, or her delighted ear have drunk them in. The stately lady's near approach will necessitate the hasty exit of the gallant, and force the damsel to assume the most unconcerned appearance she can command. It is not impossible, however, that both the fair one and the lover may know where they may meet again at a more convenient opportunity.

L. L.

AN AMATEUR PLUM-PUDDING.

PART I.

AT about twelve o'clock one dark night in December,—this is not a ghost-story, my dear madam, as you might suppose from such an ominous commencement,—three persons were assembled in solemn conclave on the right bank of the Indus, about half-way between its junction with the Chanaub and the sea. I will not insult the reader's geographical knowledge by specifying more particularly the locality of this meeting; and I shall put him quite at his ease on the score of chronology if I say, without naming the exact year of the occurrence, that the Marquis of Dalhousie reigned over India at the time, and Lord Frederick Fitzclarence was satrap at Bombay.

The trio I have mentioned were sitting in a small tent that was pitched within a few yards of the river, whose muddy waters, resembling pea-soup, both in colour and con-

sistency, boiled and bubbled like that comfortable compound before its removal to the tureen. Opposite the tent, and close into the bank, was moored the gray and weather-beaten bark that carried them and their fortunes. It belonged to the flat-bottomed order of naval architecture,—genus, budgerow,—and had a pointed stem and stern like a cocked-hat. A little thatched house, that formed their temporary residence, was built in the centre, or, to speak nautically, "amidships;" and the whole structure was an exact resemblance, minus the animals, of those ingenious playthings called by the imaginative toy-manufacturers of Great Britain Noah's arks, and blindly believed by Young England to be correct models, zoologically and otherwise, of the great floating menagerie that formed that patriarch's first essay in ship-building. The ark in question, however, from constant collisions, moving accidents by flood and sand-bank, occasional collapse, and hair-breadth escapes of every description incidental to navigation on the Indus, had lost some portion of its original symmetry, and assumed more the form and lineaments of a crushed bonnet. A large fleet of tumble-down edifices, built on equally antediluvian lines, and bearing a strong family likeness to the leaky old rattle-trap I have described, extended along the shore for more than a mile. Each boat, or, more properly speaking, each tub, contained on an average some ten or a dozen sleeping soldiers, who, having lost their health and strength in the service of the Company, were on their way home to be discharged and spend the remainder of their days in ease and comfort on sixpence a-day. The three individuals I have mentioned were subalterns, doing duty with this detachment of broken-down warriors, technically termed "invalids."

As I said before, the scene of their conference was a small tent, and from the solemn silence that prevailed, and the clouds of smoke that enveloped each person, an acute observer would have concluded that a matter of no small importance occupied their attention. A solitary candle, stuck in a bottle, struggled feebly to illuminate the dense and fragrant atmosphere that filled their canvas apartment; but without its assistance, the deep red glow of three cheroots, brightening at intervals like revolving beacons, sufficiently indicated the respective whereabouts of their silent proprietors.

One of them, a lean and sallow individual in a drab great-coat and wide-awake hat, lolled comfortably back in a rickety arm-chair, with his long legs planted firmly against the pole of the tent, according to the American idea of sedentary comfort, and gazed sternly at his boots that loomed through the smoke, high up above his head, like a couple of crows in a fog. Another, who was plump and rosy, and wore a forage-cap, and a red padded garment called a "Męczy," rested his arms lazily on the table, and, with closed eyes, nodded gravely at the bottle that formed their imprudent candlestick; but whether this motion was the result of sleep or sagacity, or a union of both, the chronicler of this history is not in a position to determine. The third, an exceedingly good-looking well-proportioned person, dressed in a London-made shooting-jacket, and Cashmere smoking-cap, reclined gracefully on a couple of chairs, and assisted the approach of his thick-coming fancies by occasionally raising to his lips, in moments of abstraction, the tumbler of amber-coloured liquid that reposed on the table beside him. With a view of satisfying the pardonable curiosity of the reader, I may as well say that the prepossessing individual I have just described was no other than the present writer.

In the absence of a mess, and following the example of *Poz's* immortal hero, we had formed ourselves into a club, of which, in consideration of my age and spectacles, and an almost imperceptible deficiency of that said to exist on the top of my head, I had been elected president, and sur-named Pickwick. The lanky gentleman whom I have represented taking his ease in the form of the letter V, and drawing inspiration from his boots, had received the *sobriquet* of Winkle; while the "stout party" engaged in holding

an imaginary conversation with the candle, and nodding the while like a Chinese automaton, made a capital prototype of the corpulent Tupman. Mr. Snodgrass was not represented in our little coterie. His counterpart had originally joined us, but being somewhat of a melancholy temperament, and finding that an atmosphere consisting entirely of smoke did not altogether agree with him, he had the bad taste to prefer pure air and solitude to tobacco and conversation, and seceded from our society. Of the convivial qualities of the remaining members, I need only say that the mahogany-coloured one, whose real name was Cockle, was afflicted with a liver-complaint, which gave him a right that no one disputed, of being occasionally snappish and disagreeable. Lambert, the plump one, was, like the generality of plump people, good-humoured and apoplectic; while I, it was almost needless to say, was mild and gentlemanly. My name is Velvet.

I have already observed that we were all three buried in the densest smoke and the most profound reflection. The subject under consideration was one that has occupied at various times, and at one time in particular, the undivided attention of the most distinguished characters in English history. The time I allude to is dinner-time, and the subject of our meditation was plum-pudding. Our heads were full of it. We had formed ourselves into a committee of ways and means, with a view of ascertaining the possibility of organising a Christmas-dinner in the most desolate part of Scinde. The difficulties that lay in our road were enough to awe the strongest minds. We had expected to arrive at Hyderabad before Christmas-day, but had been delayed by a strong head-wind, against which our light and keelless vessels could make no way, and consequently found ourselves, within a few days of that festive anniversary, totally unprovided with the numerous groceries necessary for its suitable commemoration. We were a hundred miles from any town; and, with the exception of a few poverty-stricken villages, the country through which we were passing was totally uninhabited, except by buffaloes, tigers, and other uncivilised animals. As the Laureate would say, "there was jungle to the right of us, jungle to the left of us, jungle behind us," the river in front, and a desert all round. Boats containing flour, cattle, rum, and such-like raw material, accompanied the detachment; but how we were to procure the hundred-and-one delicious little condiments that constitute that perfect *tout ensemble*, a plum-pudding, was the gigantic difficulty that was sorely perplexing three anxious British subalterns at about twelve o'clock on the dark night in December with which my tale opens.

"You know," said I, in my position as chairman of the committee,—"you know—"

"Hear, hear!" cried Cockle encouragingly.

"A Christmas-day without plum-pudding," I continued, "is perfectly preposterous."

"It's worse," exclaimed Cockle, striking the table an emphatic blow, that made the candle jump clean out of the bottle, and hit Lambert on the nose. "It's heathenish, absolutely heathenish. Isn't it, Daniel?"

"What's heathenish?" asked Lambert, waking up, and trying to look as if he had never been to sleep,— "what's heathenish?"

"No plum-pudding on Christmas-day," returned his long friend.

"Wicked!" said Lambert, replacing the candle, and rubbing his nose; "downright wicked."

"It's as bad," I exclaimed, lighting another cheroot, "as a hot season without ice."

"Or an overland mail without a letter," added Cockle, who was one of those *rare aves*, good correspondents.

"Or no rupees on a pay-day," chimed in our corpulent member, who had often experienced the uncomfortable sensation of being on the wrong side of the paymaster's books on that eventful day.

After which burst of feeling we relapsed into silence, and smoked like so many chimneys for the space of ten minutes.

"How are we off for beef?" suddenly exclaimed Lambert, who looked as if he had been fed exclusively upon that commodity from his youth up, and had thrived upon it.

"Ay," said Cockle, looking anxiously at me. "Is the butcher propitious? Let the chairman report progress."

"The beef's all right," I answered complacently. "I was orderly-officer this morning, and intercepted a lovely bit of the sirloin on its way to the commanding-officer's boat. I told the butcher I thought the colonel rather preferred the ribs."

"Making away with the commanding-officer's beef," said Cockle gravely, "is a breach of the articles of war."

"The articles of war be hanged!" valiantly exclaimed Lambert.

"We must only make the *amende honorable*," I said, "by asking the colonel to dinner."

"O, I hope it's a primo piece," said Lambert, rubbing his hands in high glee. "Let's send for it, and see if there's a nice under-cut."

"I second the proposition of the stout gentleman opposite," said Cockle, "and move that the joint be laid upon the table."

"No, no," I cried authoritatively, "that would never do; it would soon be smoked beef if it was brought here. It is as good as we can get in this famishing country; and it's safe under lock and key."

"Then," said Cockle solemnly, dropping his legs and drawing his chair up to the table, "let us concentrate our energies solely on the pudding. In the first place, what's it made of?"

"Plums, of course," exclaimed Lambert promptly.

"Yes, we know that, Daniel," said I, laughing; "but what else?"

"I haven't an idea," replied the other.

"We know that too," said Cockle, who made rather a butt of his fat friend; "you never had."

"But I've got a cookery-book," continued Daniel, not heeding the insinuation. "My mother gave it me as a parting present when I was leaving England."

"Your mother's a sensible woman," said Cockle. "Produce the volume."

"Modern Cookery, in all its branches," I read, when Lambert had fetched the well-thumbed copy from the boat. "'Dedicated to the Young Housekeepers of England.'"

"And India," added Cockle parenthetically.

"Now then," said Lambert, throwing away his cheroot in the intensity of his interest.

"Hush, Daniel!" cried Cockle, putting his tumbler on one side, and assuming an attitude of the closest attention.

"Here we are," I said, turning over the pages—"the Ingoldsby Christmas Pudding."

"If his pudding is only as good as his poetry," said Cockle, "we can't have a better."

"Who was he?" asked Lambert innocently.

"A cook, of course," replied Cockle gravely. "Go on, Pickwick. Read out the items, and let's see what we've got. Make yourself useful, Daniel, and take them down on a piece of paper."

"Mix very thoroughly one pound of finely-grated bread with the same quantity of flour," I read.

"That's easily done," said Cockle cheerfully. "Put it down, Daniel."

"Two pounds of raisins."

"Have we any raisins?" asked the long subaltern.

"I'm afraid not," I said, shaking my head. "I've tried the whole fleet, and could only get a few figs."

"O, they're better than nothing," replied he hopefully. "Put the figs down, Daniel; we're getting on famously."

"Two of currants."

"I'm afraid that's a poser," said Cockle, looking ruefully at me.

"I don't believe," I replied, "there's a single currant in the whole of Scinde."

"There are plenty in the Indus," said Lambert, with a

fat chuckle, alluding to the under-currents for which that river is famous.

"If you do that again, Daniel," said Cockle sternly, "I'll send for a file of the guard, and have you marched off a prisoner. Go on, Pickwick," he added in disgust; "we must only leave out the currants."

"Two of suet, minced small." We shall have to mince it uncommonly small, I expect," said I. "These wretched little country bullocks haven't got such an article about them."

"Very well; we must do without suet," said Cockle, with an air of resignation. "Go on."

"One of sugar."

"That we have, at all events," he exclaimed joyfully.

"No we haven't," I replied; "we finished the last this morning. Lambert empties a sugar-basin every day. I dare say he has got half-a-dozen lumps in his pocket now."

"We'll, search him," cried Cockle, starting up, and collaring the delinquent on the spot.

"I haven't, upon my honour," screamed the culprit, struggling with his tormentor. "I haven't touched any for the last three days."

"Daniel," said Cockle reproachfully, as he extracted a large lump of sugar-candy from the stout gentleman's pocket, "what's this?"

"My servant bought it at Ferozepore," cried Lambert appealingly.

"Has he got any more?" the inquisitor sternly demanded.

"Yes, lots," answered his victim eagerly.

"Then," said Cockle, releasing his hold, "put it down as one of the items of our pudding. The sugar's all right, Pickwick. What's the next article?"

"Half-a-pound of candied peel," I answered.

"The plot thickens," said Cockle. "Candied-peel I look upon as an impossibility. I don't suppose there's any nearer than Gunter's."

"Or, at all events, Bombay," I added.

"Wouldn't a pot of marmalade do as well?" cautiously suggested Lambert. "The label says it's an excellent substitute for butter at breakfast."

"And if for butter," joyfully exclaimed Cockle, slapping the corpulent individual on the back, and nearly knocking him off his chair, "why not for candied peel? Of course. Daniel, you're an honour to human nature. A second Daniel. Score it down. O, what a pudding we'll have!" exclaimed our lanky friend, quite elated. "Fire away, Pickwick."

"Half-an-ounce of mixed spice."

"We've got some cloves, I know," said Cockle.

"And some curry-powder," added Lambert.

"Put it down, Daniel," cried the former gentleman.

"Why we've got every thing."

"Not quite," I answered. "Now comes the tug of war. Mix the whole with sixteen eggs, well beaten, and strained."

"Ha, ha!" laughed Cockle hysterically. "The Scinde fowls don't lay 'em. Are there many more things wanted?" he asked in despair.

"Only four glasses of brandy," I replied.

"I wish it had been four eggs and sixteen glasses of brandy," said Lambert.

"Is that all?" asked Cockle.

"Boil six hours," I returned; "and even that we can't do, as we don't halt till four, and musn't cook on board the boat." "We must only boil by instalments," said Cockle. "Two hours a-day for three days will just do it."

"Nonsense," said I; "boiling's a secondary consideration. First make your pudding. Read out your list, Lambert, and see what we have to work upon."

"Bread," said Daniel reading, while Cockle checked each item on his fingers, "flour, figs, sugar-candy, marmalade, cloves, curry-powder, brandy."

"All very good things in their way," I said; "but I'm afraid they won't make a pudding."

"Then what are we to do?" moaned Lambert, who seemed half inclined to cry.

"Do?" replied Cockle, shrugging his shoulders, "we must only do without one, I suppose."

"I vote we go to bed," said I, rising and leaving the chair.

"Well, as Daniel has finished the bottle and emptied the cheroot-box," said Cockle mournfully, "I think it's the best thing we can do."

This motion was carried unanimously, and to bed we went.

PART II.

A Briton's attachment to the plum-pudding of his ancestors is, I think, one of the most pleasing traits in his character. He looks upon it as one of the bulwarks of the constitution, and would as soon think of doing away with it as with the House of Commons, or trial by jury. On Christmas-day especially, it is an article of his national faith to have it smoking on his table. Wherever he may be on the 25th of December,—and Englishmen, like sparrows, are found in all parts of the globe,—whether he be travelling for pleasure or profit; exploring the interior of Africa, or toiling across the steppes of Russia; a digger in the gold-fields of New South Wales, or a squatter in the backwoods of America; becalmed on the line, laying-to in a gale, scudding before a hurricane, or frozen-up in the Arctic regions,—the true Briton will suffer any privation, and brave any danger, to procure on that day the time-honoured pudding of old England, and drink a loving cup in the best liquor at his command to the health of the friends he has left behind him.

Animated by patriotic sentiments of a similar description, and nothing daunted by the unfavourable report of our committee, the 23d of December found us busily engaged in the manufacture of our pudding. We had discovered, on a further consultation of Lambert's *vade mecum*, that half the quantity of each ingredient would be sufficient for a small party, and had amassed a considerable amount of *matériel* for our praiseworthy purpose. During one of our numerous foraging excursions into the interior, we had made a seizure, in a small village, of some half-dried Cabool raisins, which, when extricated from the thick coating of bazaar-dirt that enveloped them, looked tolerably plump and juicy. Currants we had conveniently voted a ridiculous superfluity, and the butcher had accumulated for us a large heap of skin, from which we had succeeded in scraping a pretty good imitation of suet. These, with bread, sugar-candy, cloves, marmalade, and cognac, formed a very good foundation to work upon; but, alas, one element in the composition was wanting, without which all the rest would be flat, stale, and unprofitable. What is a ship without a rudder? What is a lawyer without his wig? What is a beadle without his staff? What is a pudding without eggs? Here lay our great difficulty. We had scoured the country in every direction; but not an egg was to be obtained for love or money. Either the Scindian peasantry despised wealth, or the Scindian fowls had retired from business. As a last resource, we determined on a grand military demonstration. The detachment being without arms, we were accompanied by a party of sepoys, who acted as our guard. Directly we halted, two of these black warriors were despatched to a distant village, with instructions to beg, borrow, or steal every egg they could lay their hands on. They were fully armed and equipped, with a view of striking terror into the hearts of the natives, and were ordered to secure their booty, if necessary, at the point of the bayonet. In case of failure, they were threatened with a court-martial for disobedience of orders.

Having thus done all that human sagacity and foresight could, we tucked up our sleeves, and manfully set to work. We determined that our servants should have nothing to do with so noble an undertaking. It was not to be expected that an uneducated Mussulman could enter into the beauties of such a magnificent composition; so we "concluded," as the Yankees say, both to make it and eat it ourselves. I chopped the suet, Cockle crumbled the bread, and Lambert

undertook to prepare the raisins. From this office, however, he was soon ignominiously expelled. We noticed that the heap of stoned and unstoned ones did not by any means increase and decrease in equal proportions. The paradox was soon explained. Our stout friend was detected stealthily cramming a large bunch into his mouth. As a punishment for his offence, he was immediately sentenced to sit in a corner and pound spice. In vain he entreated to be allowed to mince the marmalade, or reduce the sugar-candy to powder. We were inflexible; and the sweet-toothed malefactor was set to work to pulverise cloves, with a pestle and mortar borrowed from the hospital-boat, and sternly forbidden to approach the table under any pretence whatever.

In about two hours every thing was ready. The marmalade formed capital candied peel, a double allowance of raisins made up for the absence of currants, and we flattered ourselves that the mixture looked, smelt, and tasted exactly as a plum-pudding in an abnormal state should. But still it was only as the block of marble before the sculptor's chisel has given it form and beauty. It wanted the vivifying principle, without which the unleavened mass before us would be a

"Monstrum horrendum informe ingens, cui lumen ademptum;"

which, being interpreted, means "a great, ugly, horrid thing, as heavy as lead."* On what trifles does human happiness depend—we only required eight eggs to lighten both our hearts and our pudding!

I will not pain the reader by dwelling on the agony of suspense we endured for four mortal hours. The torture was becoming insupportable, and we were on the point of going to bed in despair, when a breathless post arrived with the joyful intelligence that our hunters were on the track of a poultry-fancier. Presently a frantic jemadar rushed in to say that they were approaching, and could be seen in the moonlight gesticulating furiously, from which he imagined—Allah be praised!—that they had been successful. Next it was announced that one of them carried a light-coloured object at the end of his musket; and then the dusky heroes themselves made their appearance, grinning with delight, and bearing a basket, in which reposed—O, joy beyond expression!—twelve fine eggs.

The sepoy declared that they had given prices that were purely fabulous, but we paid without a murmur. Lambert, in a transport of gratitude, presented each of them with a rupee, as "bucksheesh," and the delighted darkies retired to their boat invoking blessings on his lordship's head for his liberality. With a large washing-basin before us, we joyfully proceeded to put the finishing stroke to our work. Each member seized an egg. The impetuous Lambert led the attack. Carefully cracking the shell, he poured the contents into the basin. "O, by Jove!" he suddenly exclaimed, beating a rapid retreat from the table.

"What's the matter?" we both cried, alarmed at his horror-stricken countenance.

"Matter?" he screamed, pointing to the basin with one hand, and holding his nose with the other—"it's a BAD one!"

I draw a veil over the scene that ensued. It is not in the power of words to picture our disgust and indignation. Our feelings may be imagined, but *not* described. My pen falters as I proceed. One by one the whole dozen were tried, and—horrible, most horrible!—with the same result. All, all had gone the way eggs occasionally go. We stared at each other in blank dismay. Lambert burst into tears.

"Those rascally sepoyas," growled Cockle, grinding his teeth; "I wish we could flog them."

"Q, it wasn't their faults," I said. "Their caste won't allow them to touch eggs; so they were obliged to take the villager's word."

"Then," replied Cockle viciously, "I should like to set fire to the village."

* "Cui lumen ademptum," from which the Night has been taken away, i. e. wanting lightness.

"What's to be done now?" asked Lambert through his tears.

"I vote we pitch it into the river," cried Cockle in disgust, taking up the dish to suit the action to the word.

"No, no," said Lambert, "wait a bit; I've read somewhere or other of a substitute for eggs."

"Marmalade, perhaps," sneered Cockle.

"No," replied the other, searching through the cookery-book—"Snow."

"Well, you great owl," returned the bilious gentleman, whose temper was a good deal ruffled by our misfortune, "where are we to find snow in Scinde?"

"Ah, I forgot that," said Lambert. "If we had been in the Himalayas now—Stop—here's something else; 'where eggs cannot be procured, beer may be used.'"

"Does it say that?" asked Cockle quickly.

Lambert nodded.

"Here, Nubby Bux," shouted Cockle to his servant, "a bottle of beer and a corkscrew,—sharp!"

The beer was brought, the cork was drawn, the preliminary gurgle had commenced; in another moment our unfortunate pudding would have been drenched with a flood of Allsop's bitter ale, when a stout non-commissioned officer, carrying a parcel tied up in a red cotton pocket-hankerchief, made his appearance at the door of the tent.

"I beg your pardon, gentlemen," said he, saluting.

"Now what on earth do you want here at this time of night, Sergeant Rumble?" snarled Cockle, angry at having been discovered in the middle of such an undignified operation as deluging a pudding with malt-liquor.

"I am sorry to disturb you, sir," answered the sergeant, gazing with astonishment at our culinary display, "but my missis,—that is, Mrs. Rumble, gentlemen,—hearing that you wanted some eggs, sent me to beg your acceptance of half-a-dozen."

"Six eggs!" exclaimed Cockle incredulously.

"You don't mean to say, Sergeant Rumble," I asked, in the kind of tone that a barrister reminds a witness that he is on oath,—“you don't mean to say that you possess six eggs?"

"Yes, sir, I do," he answered, without the slightest variation.

"Ah, but not fresh?" said Cockle, whose faith on the subject of eggs had been a good deal shaken.

"New-laid, sir," replied Rumble, untying his pocket-hankerchief, and disclosing a forage-cap that formed a kind of nest for six snowy eggs. "There they are, gentlemen, and if they will be of any service to you—"

"Service!" cried Cockle tragically; "they'll save our pudding."

"You're a regular trump, Sergeant Rumble," said Lambert, heedless of military propriety.

"It's very good of you to say so, sir," returned the gratified sergeant.

"But," I asked, "where did you find such a treasure, Rumble? We've been scouring the country for eggs."

"Why, sir, my wife brought some pet fowls all the way from Peshawur; and lately they've taken to laying. I don't believe there is another egg in the whole fleet."

"Your wife's an angel," cried the enthusiastic Lambert.

"Well, I don't know about that, sir," said the sergeant doubtfully, not liking to differ in opinion with an officer. "You see, Mrs. Rumble's figure's not what it was."

"But," said I, "you'll want these eggs for your own pudding."

"Not a bit, sir," answered the sergeant. "You'll oblige my wife by accepting them. She'd be angry with me, gentlemen," he added, rather nervously, "if I were to take them back."

"Well, then," I said, "I tell you what we'll do; we'll send you a slice of ours."

"And a bottle of wine," added Lambert.

"And a bundle of cheroots," said Cockle graciously.

"I know you like a good cheroot, Rumble."

"I'm very much obliged to you, gentlemen," said the sergeant, quite overpowered, and backing out of the tent; "and so will Mrs. Rumble be, I'm sure."

"Bless her!" ejaculated Lambert.

"And," added Cockle, recorking the bottle of beer, "as we've no occasion for this now, you'd better take it with you."

And the worthy non-commissioned officer departed, carrying with him our substitute for eggs; while we relieved our pent-up feelings by giving three loud hurrahs for no one in particular, with one cheer more for Mrs. Rumble.

Here my narrative should end. All the *dramatis personæ* are pleased and happy; and the curtain should fall on the above affecting *tableau*, with Cockle on the right, myself on the left, and Lambert executing a clumsy *pas de joie* in the centre; but as there is one character in whose fate the fair reader may still feel some interest, I shall briefly complete the veracious history of the real hero of my tale, viz. our pudding. After Sergeant Rumble's departure, it was soon finished. Although two eggs short of the number enjoined by Mr. Ingoldsby, we managed, by reducing the other proportions a little, to preserve that "balance of power" on which the excellence of a pudding, as well as the peace of Europe, so essentially depends. After cautiously securing our treasure in the camel-trunk that formed our temporary larder, we went to bed; and though our bilious friend was busily engaged in inflicting imaginary vengeance on the dishonest villagers for their shameful conduct in the matter of the eggs, there were not three happier subalterns in the Company's dominions that night than the president and members of our little club on the Indus.

The next day, after dinner, our culinary *chef-d'œuvre*, tied up in a new towel of Lambert's, properly floured, was deposited with much ceremony in our only saucepan, and "advanced a stage" on the road to perfection, while we sat round the fire, on the bank of the river, enjoying our cheroots, and watching the operation. This was on Christmas-eve. At the expiration of three hours, and when our bantling had arrived at a semi-boiled condition, it was taken out, and locked up again as carefully as a Derby favourite the night before the great Epsom field-day. On the morrow, directly we halted, the object of our solicitude was taken for the last time from its nocturnal resting-place, and subjected to a like mollifying process for the remainder of the time prescribed by the cookery-book.

My story draws to a close. The colonel dined with us, and pronounced the sirloin excellent. As for the pudding—the pudding that had caused us so much anxiety, the pudding of our hopes and fears, the pudding we had created, the pudding—I could linger on the subject for ever, but printers have no sentiment, and I must conclude,—the pudding was *delicious*! What more need be said? Except that we sent a large slice to Mrs. Rumble, and that poor Lambert was exceedingly unwell the next day.

J. H. L.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

In treating of modern preachers, we deplored the separation which they too often make of religious influence from man's daily affairs, and the disunion which thence ensues between the ideas of Worship and the interests of Life. The complaint, if just, applies, not only to many Christian teachers, but to society in general, and especially to the more intellectual portion of it.

If it must be admitted, on the one hand, that the preacher's message is often so phrased as to exclude from

its bearings the pursuits which engage men of thought, taste, and science, it must also be granted that intellectual workers, in their turn, are frequently content to accept the distinction which the pulpit suggests, and to regard their labours as matters apart from religious uses and responsibilities. The poet or the novelist, who pens his tale of human emotion; the artist, who depicts human life, or that of nature; the philosopher, who interprets the laws of mind; the man of science, who garners material facts—are no less apt to consider their callings beyond the pale of religion, than the preacher is reluctant to bring them within its range.

Yet, is it possible that religion,—a central life informing the whole being,—can be cut off from any of its manifestations? Can the heart beat only for itself, instead of quickening every member and nerve of the system? Can any intellectual force be exerted bearing no relation to the conscience which links us to that Personal Deity in whom and by whom we are? To come to details, can the man of imagination compose his poem or romance, utter his experience of human life and feeling, and omit all reference to those spiritual truths which, whether obeyed or resisted, preside over our nature?

The attempt, if made, would be futile. The writer gives the record of human struggles. How are they passed through? meekly, courageously, with pious faith and submission, or with rebellious complaint, or cowardly bewailing? He inscribes on his page the tale of human wrong. Is the Divine pattern kept in view? Is the wrong conquered by the nobleness and forgiven by the magnanimity of the sufferer; or does it embitter the heart, and issue in revenge? In the latter case, which it is of course quite legitimate to paint, is internal retribution—the self-torture and remorse of the avenger—shown as the natural product of his sin? Love, too, has its chronicle. Is it that love, hallowed by religion, which, receiving the highest human bliss, looks upward in grateful aspiration, and deems the best bond between itself and its object is that of ennobling faith and duty? Or is it the mere reckless passion born of hot blood, or the caprice of a pleased eye; or, worse than all, is it the base contract which springs from interest, and which should mumble its sordid vows over the settlement rather than the Prayer-Book? Again, we have the story of death and bereavement. Do we rise from it with the sense expressed or implied of dull and hopeless pain, or with the instinct of an immortal future, and with affections attracted thither by the very blessings that take flight before us?

Art, in another way, and under different limitations, presents and solves the same problems. All glimpses of our human story, whether reflected on the page or the canvas, tend either to raise and purify the heart or to degrade it. The delineation even of unconscious nature has a similar, though less direct influence. The sunset and the mountain-pass speak of Him whose words are in His works, and solemnise our feelings in the precise degree that they are reverently and conscientiously portrayed.

Systems of mental philosophy, again, deal with questions of vital moment to our spiritual being. They represent man either as the creature of chance and circumstance; show him "cabined, cribbed, confined" in the gross walls of matter; or exhibit him as the victor over circumstance, leaving on every obstacle the impress of his ascendancy, shaping, as it were, from the very granite of fortune a monument to his immortality.

Finally, the scientific man finds in his facts new illustrations of material laws, and either derives from them fresh proofs of a Divine Lawgiver, or with strange fatuity wrests the very testimony of orderly effects into a denial of an intelligent cause.

Now if imagination, thought, and knowledge thus influence the very essentials of our nature, how incomplete must be the theology which, instead of using these powers as religious instruments, neglects or decries them; which despises imagination because, forsooth, it deals in fiction,

and does not perceive that such fictions touch upon the realities of our inner life, and can never go home to the heart of man unless they utter some truth from it; which holds it of little moment whether philosophy represent the mind as "a blank sheet of paper," or as endowed with innate faculties of moral judgment, although the whole doctrine of man's responsibility be involved in the issue of the question!

It may be said, perhaps, that even the noblest imagination and philosophy bear only upon morals, not upon religion. We do not overlook the distinction between them. Religion is the aspiration of the whole being towards a personal God; morals may be simply the expression of our natural and acquired sense of right towards man. Still such must always be the inter-dependence between the two sentiments, that the best affections of the soul can scarcely be fostered without conducting it to worship; nor can any genuine and enlightened worship exist which does not tend to exalt and purify every faculty of the heart and the mind. Granting that there are specialities in the Christian plan which belong exclusively to the pulpit, we cannot think its mission accomplished until it seeks to inform, with the Christian spirit, the whole sphere of man's capacities and interests. Let the Christian minister regard thought and imagination as powers to be consecrated, not to be proscribed or neglected. Let religion flow into the teachings of art, poetry, philosophy, and science, and let the workers in these departments recognise in Christianity an ideal to be expressed and illustrated. To some extent this is already done; but often accidentally and vaguely, rather than with distinct purpose and apprehension. The union of intellectual forces with religious truth is perhaps the great reconciliation needed by the age. The noblest ideals of pagan thought embodied the highest views of religion then current. Why should Christianity alone be regarded as distinct from, or opposed to, the inspirations of genius? May we not look for a time when belief shall no longer ignore the intellectual faculties, as if they had been given in vain, and when those faculties shall find their best claim to man's homage in that which they pay to the Creator?

GREENHILL HALL.

BY MRS. C. CROWE, AUTHOR OF "SUSAN HOPLEY," ETC.
IN SIX CHAPTERS.—CHAP. V.

THE marriage had taken place on Tuesday, the 3d of April. The following day, Wednesday, passed without any intelligence; but the interest and curiosity remaining in full force, it would be difficult to say how many times in the course of it the exclamation of "I wonder how they are getting on" was repeated by men and women, young and old, in the good town of Doncaster.

Towards noon on Thursday, a baker who lived opposite to Mr. Larpent, but did not enjoy the advantage of his custom, observed to his wife that Mr. Larpent's blinds were all down, and that he had not seen that great man since the wedding; adding, that, "now he was allied to nobility, and his daughter 'my lady,' he supposed he meant to shut up shop." But his wife answered, that she thought he was gone somewhere into the country, as she had yesterday seen Bob, the ostler at the Bull, standing at the door with a saddle-horse, and Mr. Larpent presently came out and mounted it.

"What o'clock was that?" asked the baker.

"Well, I suppose it might be one, nearly; it was while you were out about that flour."

Here a lad they had in the shop spoke up, and said that he had seen Mr. Larpent come home last night about ten o'clock; and that young Mr. Lupton came out to the door to meet him, and they went in together, while the maid led the horse to the Bull.

All the day the blinds remained down; and as nobody was seen, and the maid answered to all inquirers that her master was out of town, and there was no business doing, many were the conjectures formed to account for so unusual a circumstance. But on Friday, a report spread through Doncaster that Mr. Simmons, the undertaker, was sent for to the Grange, and that young Lady Maxwell was dead. How she had died no one could tell; there was a murmur of many things, a *sough*, as the Scotch call it, but nothing known. The less was known, however, the more was suspected. All sorts of rumours prevailed; and, with ominous faces and significant shakes of the head, the words, "murder, poison, suicide," were whispered and passed from mouth to mouth.

The undertaker's people knew nothing, or would tell nothing; even the fact of Mr. Simmons being summoned to the Grange they refused to confirm, and how the report got wind nobody could find out. Mrs. Simmons received numerous visits that morning from friends anxious to ascertain the state of her health; but where her husband was gone she did not know, as she never liked to hear about "them things, and therefore never asked no questions." She thought, indeed, if she had known Mr. S. meant to take to the black business, she would never have married him, as it was not pleasant for a person with her delicate health, &c. When Mrs. Simmons got upon that subject, the case was hopeless, and her visitors took their leaves.

One or two people got hold of a story about a pedlar, who was said to have seen something, but what, nobody knew; nor could they get at any particulars, or find the pedlar. Arthur Lupton had utterly disappeared; and what was stranger, the postboy who had driven the bride and bridegroom on their wedding-day from Doncaster to the Grange had disappeared also.

One thing, however, was certain, and it was impossible longer to conceal it; Emmeline Larpent was dead; for, on the eighth day after the wedding, the great gates at the Grange were thrown open; the last time was to admit the carriage that brought her to her temporary home, now it was to admit the hearse that was to bear her to her long one. Presently the hearse reappeared, followed by a single mourning coach; they took the way to the nearest churchyard, where a coffin was lifted out, and deposited in the grave of the late Lady Maxwell.

In the coach sat Sir Theobald, Mr. Larpent, and Mr. Money Penny; and behind it followed the old chariot, with its faded linings, scratched panels, and ominous device of, *Dirina waken sleeping dogs*.

The churchyard-gate was closed when the funeral entered; but outside were a few stragglers, as also along the road the procession passed, who were evidently brought there by a curiosity which they were afraid openly to manifest. There was also a young man, with his hat over his eyes and his chin muffled, as if he did not wish to be recognised, who had apparently concealed himself in the churchyard before the arrival of the parties concerned. He kept his handkerchief to his eyes all the time the clergyman was reading the service, and stood in the rear behind Sir Theobald. When the coffin was lowered into the grave, he suddenly, as by an irrepressible impulse, darted forward to snatch a last glance at it; when he could see it no more, he retreated and disappeared behind an angle of the church. During the ceremony Mr. Larpent appeared absorbed in grief; Mr. Money Penny looked very grave, and as sorrowful as his dour features would permit; Sir Theobald looked, as those who caught a sight of his face said, awful! His complexion, which was naturally of a rusty red, was now streaked with white, as if the pallor of death was struggling to overcome the ruddy hue of life; and the hard features, that could not fashion themselves into an expression of human sorrow, seemed crushed and distorted by the effort into a wild portrait of horror. His stalwart figure was bent, and he seemed suddenly shrunk from a height of six feet three to less than an ordinary-sized man. He appeared

LANDSCAPE. BY S. P. JACKSON.

almost insensible to every thing that was passing, and stood motionless, with his two hands crossed on the knob of a heavy stick, which alone seemed to prevent his falling forwards into the grave, on which he vacantly glared.

When the ceremony was concluded, they departed as they came. The stragglers got into the churchyard, together with several spectators who had been concealed behind trees and hedges, and advanced towards the grave, where, with expressive gestures and bated breaths, they whispered their comments on what they had seen, and what they suspected.

The young man also reappeared, but kept himself apart till the others dispersed; and then he came forward and spoke to the sexton, who thereupon closed the gate, and left him alone with the grave-digger and the dead.

From that day forth the mourners that attended young Lady Maxwell's funeral were no more seen. Mr. Larpent's house was shut up; his head-clerk, an elderly man, in whom he had great confidence, wound up his affairs; and after a short interval a distant relative arrived, and succeeded to his business. Mr. and Mrs. Moneypenny returned to their native land. Arthur wholly disappeared; and for some weeks Mr. and Mrs. Lupton also; and it was understood that they were gone to London to place him in an attorney's office there. The Grange was shut up; the servants dispersed; and Sir Theobald gone, no one knew whither.

In those days, coroners, registrars, and newspapers were not what they are now. There were no paragraphs headed "Extraordinary Story," "Suspected Murder," "Mysterious Death of a Lady," &c. Rumours were not conveyed, as by magic, from one end of the island to the other; and every body did not know what every body did. Within an area of a certain number of miles, the report of these strange events spread, and created considerable comment and discussion; but beyond that circle little or nothing was known; indeed, it can scarcely be said that, within it, any thing

was known. There were only vague suspicions; and nobody chose to risk bringing themselves into trouble by seeking to penetrate the mystery, or by meddling with matters with which they had no concern; so, gradually, the impression faded. Other wonders succeeded to occupy men's thoughts; the busy world worked on; and in a few years the lamentable fate of young Lady Maxwell of the Grange was well-nigh forgotten.

CHAPTER VI.

But there is often a germ of life in things that seem dead; and suddenly, after a lapse of six years, the memory of this mournful tragedy was revived, by a report that the Grange, which had been shut up from the period of Sir Theobald's disappearance, was about to be occupied by a stranger. The tenant was a Scotsman; the place had been let to him at a very low rent by Mr. Moneypenny; and after the necessary airing and repairing, he was conducted into it by Mr. Larpent's successor. The new-comer was judged to be in narrow circumstances; and nobody saw much of him or his family. But, shortly after their arrival, a report spread abroad that the house was haunted. The servants said they could not live in it; and a girl, who had been engaged as housemaid, actually relinquished her place on account of the noises she heard, especially the sound of a woman weeping. Probably, however, the principals did not care for ghosts; and the subordinates, if ghost there was, became accustomed to it; for though the house retained an ill reputation, the stir died away, and things went on there in the ordinary fashion.

Not long after this, a woman who had formerly been laundress at the Bull Inn, but had left it for some years, reappeared at Doncaster. Of course she had her old acquaintance, her cronies, and her gossips; and when it was found that the cause of her leaving was, that she had been secretly married to a postboy, and that that postboy was

the very same who had driven Sir Theobald and Lady Maxwell from Doncaster to the Grange on their wedding-day, that he had good reason given him for relinquishing his situation, and that she had followed his fortunes,—she, as may be well imagined, became an object of extraordinary interest; and the little she had to tell,—for it was not much,—was eagerly listened to, and speedily conveyed from the kitchens to the drawing-rooms, and disseminated from mouth to mouth through the town and neighbourhood.

She had now returned to her native place, because her husband was dead; but she said he had often and often talked to her about that poor young thing Miss Emmy Larpent, and that awful man Sir Theobald. It was not, however, till some time after they had quitted Doncaster that she was made aware of the cause of their removal. All she knew was, that two days after the wedding, her husband suddenly told her they were to leave; that they went off that night by the mail; and she saw that Jem had plenty of money to pay their way. He got a place as coachman in a gentleman's family in Edinburgh, through a letter he brought with him to a lawyer there; and they had done very well ever since. Jem said, that once, when he was going through a large city called Glasgow, he was certain that he had seen Mr. Larpent, Miss Emmy's father, in the street.

But what of the wedding-drive?

"Well, Jem said, that as they drove from Mr. Larpent's house he heard the blinds drawn down with a whack; and as the young lady had looked very sorrowful when she got into the carriage, he supposed she was crying, and Sir Theobald did not like her to be seen. As it was a very long stage, of course he stopped to give his horses a feed, and Sir Theobald put out his head, and asked for a glass of water; but the blinds were not drawn up, and he saw nothing of them till they arrived at the end of their journey. The moment the carriage stopped, the servants, who were expecting them, opened the door, and handed out Miss Emmy, who was sitting on that side. He did not see how she looked, for she had her veil down; besides, she went straight in at the door, without turning her head. Sir Theobald paid him, and went in also, leaving him and the servants to unload the carriage. While he was doing so, happening to look up to the first-floor windows, he saw Miss Emmy standing there, looking dreadful-like; that she observed he was looking at her, and he thought she wanted to say something to him; but perhaps," as Mrs. Jem suggested, "she was only taking a last look at the chaise that was going back to her home, where she was never to go more. Presently, Sir Theobald came out to fetch a paper that he had left in one of the pockets of the chaise; after which Jem mounted his horse, and drove to the village, where he put up at the Admiral Keppel to feed and rest his cattle. As he drove away he looked up at the windows, but he saw nothing of Miss Emmy.

"He remained at the Admiral till near eleven o'clock, and then set off on his journey home; but he had not gone far, before what should he see but Miss Emmy walking along the path by the roadside. It was a bright night; and at first, seeing a figure all in white, he could not think what it was, and felt queer-like; but when he got a little nearer, he saw that it was Miss Emmy. She had no bonnet or cloak on; but her veil was thrown over head and shoulders, and she was walking very fast. As he came up to her, she held up her hand to him to stop.

"Get off your horse, and open the door," says she. 'Quick, quick!' And Jem said she spoke fierce-like, and desperate.

"By the time he was off his horse she had opened the door herself, and was letting down the steps; Jem helped her in, thinking that she wanted to go back to her papa, poor lamb. But instead of that, she told him to drive to Greenhill Hall; 'Mrs. Lupton's,' she said,—'Mrs. Lupton, at Greenhill Hall.'

"Well, Jem said he felt quite taken aback-like, and he

could not tell whether he ought to do it or no; for it was his opinion she was out of her mind; but while he was holding the door open, considering about it, she put her two hands together, and said, 'O, take me to Mrs. Lupton! Do, do take me to Mrs. Lupton!'—And then she put her hand in her pocket and drew out her purse, and gave him two golden guineas; and Jem said, 'Well, I will, miss.' And then he bethought himself, and called her 'my lady,' as, indeed, he was bound to do; but little she cared about her title then.

"So Jem got on his horse, and away they drove, as fast as they could go, to the Hall.

"It's an old place, you know, and there's a long avenue leads up to it; and when they got nearly to the top, she let down the front glass, and before Jem could get to the door of the chaise, she had opened it herself, and jumped out.

"Shall I wait, miss?" said Jem.

"No," says she, 'and never say a word of this to any body.' And with that she gave him another golden guinea that she'd got ready in her hand, and walked away straight up to the door. So Jem mounted his horse, and away he drove; but before he'd got three hundred yards, who should he see galloping up the avenue but Sir Theobald on horseback. Jem did not know who it was till he was quite close, and then you may be sure he whipped up his horses to get past him, for he was afraid he'd have him up for taking away Miss Emmy. So away went Sir Theobald, and away went Jem the contrary way; and when he got home that night his beasts were ready to drop; and as for himself, he wasn't his own man again till we left Doncaster, especially after he heard that Miss Emmy was dead.

"For my part," continued Mrs. Jem, "I couldn't think what had come over the lad, for he never said a word to me of what had happened; but the next afternoon he says to me, 'Molly, old woman, you must pack up your duds; I'm a-going to cut, and we must be off to-night.' God forgive me, but my mind misgived me that he had done something wrong; but he laughed, and told me I was a fool, and that he had promise of a good place, and that we should be better off than ever we'd been before; and so we was, sure enough, as long as Jem lived, poor fellow! But he was always of opinion that Miss Emmy had gone out of her mind that night."

Shortly after this, a woman, who had been in Mr. Larpent's service at the period of that ill-starred wedding, and had since filled other situations, happened to be engaged by a family at Wakefield; and, in a letter she shortly afterwards wrote to her friends, she mentioned that on going into a little haberdasher's shop to buy some ribbons, she had recognised the man as an old acquaintance. He was the pedlar, or travelling merchant—at that time a more respectable and profitable trade than now—of whom she used to purchase her gowns and ribbons when he came to Doncaster. Naturally they fell into conversation; and on her relating how she came to leave the situation she had occupied when they had dealings together, and how her young mistress, Miss Emmy, had died directly after her marriage, and was supposed to have come to a lamentable end, the man seemed very much struck, and asked the day of the month, and a great many other questions. But when she told him that Sir Theobald had never been seen in that part of the country since, and was supposed to be gone to a far foreign land, he opened out, and told her what he declared he had never mentioned to any one but his wife, fearing to bring himself into trouble, or at the least to be had up as a witness, which might have interfered seriously with his business.

He said that on the day in question, having made his usual tour in the north, he was travelling southwards, and was making for the Admiral Benbow, where he meant to put up for the night. He was later than usual on the road, and every thing was still, when he heard a horse's foot galloping, and in a minute more it passed him, with the bridle trailing and nobody on his back. The animal had evidently taken fright, and was running away; and he expected to

find his rider, dead or alive, on the road. But he saw nothing of him; and walked on till he came within half-a-mile of the avenue that leads to Greenhill Hall; and then he was startled by seeing a large object coming towards him on the footpath that at first he could not make out, although there was a bright moonlight. It was partly white and partly black, and he could not distinguish whether it was an animal or a man; so, as there was a gate leading into a field hard by, he jumped over it, and watched it over the hedge. When it came nearer he saw it was an exceedingly tall man, carrying a lady on his back. The lady, who was very small, was all in white, and appeared to be either dead or in a faint; for her two arms hung over his shoulders instead of clasping his neck, and he supported the body by holding one in each hand. He could not see the man's face from where he stood, for the head of the lady rested on his shoulder and hid it; but he saw hers, and he was almost sure it was a corpse. He was very much astonished and alarmed; and his surprise was the greater, because he felt convinced, from the height, that the man was Sir Theobald Maxwell, whom he had caught a glimpse of when he was in that part of the country the year before. Whether the baronet had observed him he could not tell; he strode on wonderfully fast, considering the burden he carried, and never looked to the right or the left.

"I waited till he was out of sight," said the pedlar, "and then, instead of going to the Admiral Benbow, where my wife was waiting for me, I took another road; and when she joined me the next day, we went off to another part of the country; for if there was any thing ugly, I thought it safer to know naught about it; and afore next year I'd taken this here business, and have never been in that neighbourhood since."

This was the substance of what Sir Thomas Maxwell had to tell, with the addition, that when Sir Theobald reached the Grange with his awful burden, the door was wide open, and his bride stood in the doorway. He was so struck with horror at the sight, that he dropped the corpse from his shoulders; but with desperate resolution, he lifted it from the ground, and carried it upstairs, where he laid it on a bed. He then called up one of the maids, and desired her to bring some cold water and burnt feathers, as my lady had fainted. She did so; after which he told her she might go to bed, and he would attend to her ladyship himself. The next morning he was found sitting by the bedside watching her. He said he thought she was asleep; but she proved to be dead. Mr. and Mrs. Money Penny were immediately sent for, and remained in the house till after the funeral, when they all departed together. Mrs. Money Penny performed all the needful ministrations about the body with her own hands, and nobody was allowed to enter the room till the undertakers placed it in the coffin and screwed it down.

She was dead; her body was in the coffin; but when he woke from his disturbed sleep in the morning, her head lay on the pillow beside him; and when he sat at meat, she confronted him; he met her on the stairs; in the drawing-room young Lady Maxwell kept her state. She was the real mistress of the house, for he cowered and fled before her; and the power she never would have had alive, now she was dead was hers. She drove him from the country, and he took refuge in India with his sons, whom he had sent there before him. New ideas took possession of him; and, with the natural instinct and thrift of a Scotsman, he made a large fortune, which he entailed on his sons and their heirs, upon the condition that they did not return to the Grange before a certain period, which period had now expired.

When Sir Thomas had finished his narrative, Mr. Lupton related the circumstances of the strange visit which had caused him and his wife so much perplexity several years earlier; and then, and often afterwards, they discussed the question, which the reader will perhaps have asked himself before this, whether it was possible that the latter event

could have any connection with the mysterious death of young Lady Maxwell, which had taken place a hundred years before; and whether her presence at the Grange, during the awful week that preceded the funeral, had been a real spiritual appearance, or the mere phantom of Sir Theobald's reproving conscience and excited brain.

Be it which it might, from that day to this no other explanation has ever presented itself of the appearance of the White Lady at Greenhill Hall, which appearance, I beg to assure my readers, is a perfectly authenticated fact that occurred in the present century.

NEW BOOKS.

WITH what feelings would that poor shoemaker, who, with an infirm frame, worked away at his craft in a garret some sixty years ago, have looked upon the edition of his poem—actually his—that now lies before us? Is it possible that all this luxury of binding, with thick and bevelled boards, rich cream-tinted and hot-pressed paper, with its gilt edges,—and, far more important, with all this artistic decoration, which has been brought into use solely for the loving adornment of his chief poem,—is it possible, he would ask, scarcely trusting the evidence of his own senses, this is in honour of *my* work? Yet so it is; and while no one professes to believe the *Farmer's Boy* a poem of a high order, or as marked by the exhibition of that almost divine insight into the grand and beautiful mysteries of nature which is the poet's gift, it is still a work the world will not willingly let die; and we think the world quite right in so feeling. It is truthful, and it deals with that subject which ever lies near to the heart, as well as to the necessities and interest of man,—country life and the culture of the soil.

No less than thirty exquisite engravings are found in these pages, from designs by Birket Foster, who is fast taking rank as the most poetical of English landscape illustrators; Harrison Weir, who has the animal subjects under his charge, and does them thorough justice; and G. E. Hicks, who contributes the figure-pieces,—some of them charming and graceful, others not quite so successful.

In looking over such a book as this, while engaged perhaps in uncongenial places and pursuits, one feels the longing for natural sights and sounds grow strongly over us. Mr. Dendy's work† will suggest pleasantly to us the question, Why not pack up our baggage and decamp in quest of some of those "beautiful islets of Britain" of which the author speaks? This is the kind of medicine we like to be told of by such men. Mr. Dendy, who adds the artist's eye to the author's pen, takes us in his work through the Isles of Wight, Scilly, Lundy, Caldy, Ramsay, &c.; Bardsey, Holy Isle, Coquet, Anglesey, Man, Ailsa, Bass, Arran, and Bute. How many of our readers knew that the one great isle—world-famous—was so rich in lesser isles, lying like satellites about it? Some of them are certainly less known to our countrymen than places in foreign parts, scarcely, if at all, more interesting. As the author observes,

"The islets may not challenge the loftier magnificence of Continental scenery, but the green and golden foliage of their woods, and their rich variety of rock, are as perfect of their kind as the cinnamon-groves of Ceylon or the peaks of the Himalayas. In one element of the beautiful England is almost pre-eminent; the pure rich green of its blossomed meadows, and its leaf-loaded forests, and the changeable tints that cloud and sunbeam fling over the island atmosphere, may well compensate for the silvery gleam that floats over Switzerland, or the flood of rosy light that, while it illuminates, is burning the flower and the leaf in Spain and Italy."

What could be more delightful than, with the aid of such a guide, to determine to see with our own eyes, and know

all about, these beautiful islets of Britaine, and the peculiarly interesting science they illustrate—geology?

And if, as we travel, we would have that other enjoyment, which to the poet Gray was the summit of earthly happiness—to lie on a sofa and read novels—and which, at all events, to the tired wanderer's life, forms a very capital episode now and then,—what can be more considerate than the policy of our nineteenth-century publishers, who not only succeed in giving us, amid much trash, many capital fictions, but give them almost on our own terms. Miss Pardoe's *Popular Tales Abroad and at Home*,* and Miss Sedgwick's *Married and Single*,† represent fairly enough the flood of popular literature that must be now pouring into every nook and corner of the land, and leaving rich material of thought, knowledge, and aspiration behind. We have read Miss Pardoe's tales through, and with interest; one of them—"The Father and Son," for instance—contains powerful dramatic elements, which the authoress has known how to use.

Miss Sedgwick's book suggests many serious and hopeful speculations. It belongs to that class of books which Miss Bremer, Miss Martineau (in *Deerbrook*), and the author of the *Head of the Family*, Lord Erlistoun, &c., have made so popular; books in which there are no melo-dramatic mysteries, and little physical excitement, but which trust to faithful portraiture of the hearts and minds of men and women as their chief attraction, and which, above all, make *Home* their great theme. It is not too much to say, that family-life, in the more civilised parts of the world, must have been raised bodily, as it were, at once some stages higher in moral and spiritual experience by the admirable lessons of these books. In them duty is the first law; and the yielding to erring or selfish impulse, the first step in the downward path. In them marriage assumes its true position as a holy ordinance, for the holiest of purposes; and is not treated as a lottery, where every one hopes to be lucky enough to catch a prize, and need then care naught for the blanks, or those who are to receive them. In these books the *beauty* of family-life comes like a revelation before the eyes of the many who, alas, have never tasted and never conceived what home may be when guided by duty, filled with love, earned by self-sacrifice, and graced by the thousand nameless social habits and courtesies which our civilisation—poor enough in many respects—has taught. Can we overrate the importance of the diffusion of such books by countless thousands yearly? can we be too grateful to the authors who have with such materials—of old thought to be good only for sermons, bad for novels and romances—beaten the writers of the excitement school upon their own ground, by positively making their books more interesting? *Married and Single* is a book of this class; one that after a few pages are read, which are not particularly interesting, becomes engrossing, irresistible in its interest, not to be laid down till at least we know what will be the result of that long problem which Grace Herbert has had to solve—whether her better or her worse qualities would finally fix her destiny.

While the spirit that should rule over our domestic relations is thus nurtured, it is worthy of note how all the appliances are becoming more and more familiar to us. Foremost among these is Art; we do not here refer to it in its higher manifestations, but in its loving condescension to the wishes and wants and necessities of daily life. We have been lately reading Mr. Redgrave's *Report on the Present State of Design as applied to Manufactures*,‡ and have been struck with the evidences it affords, directly or indirectly, of the progress we are making in this direction. The *thoroughness*, to put in one word all we would say of this Report, is not merely an evidence of the profound knowledge of or love for the subject evinced by Mr. Red-

grave, or of the importance attached to it by the government which commissioned him to visit and study the late Paris Universal Exhibition, but of the persistent, however gradual, growth of tastes and habits in the people of France and England, which must, under intelligent guidance and efficient organisation—such, for instance, as the Schools of Design afford—lead sooner or later to a state of things when even the poor workman in his humble cottage shall have his eyes refreshed and instructed wherever they turn by graceful forms, harmonious colours, suggestions of fair scenes, noble men who have lived and struggled and borne, glorious actions which have illumined the path of history. These are the things that, habitually around us, must tend to mould our own, and still more our children's, characters, and that help to equalise, as regards some of the most precious of God's gifts, the otherwise unequal condition of men.

In this Report Mr. Redgrave, taking France mainly as the fittest country to illustrate his theme, shows how national tastes arise out of national habits, the advantages France gives to her people, by making its chief public buildings and its art-collections so universally accessible, and how and why national tastes are most likely to go astray. He also deals with the very first principles of the matter, in discussing the sources of style as developed in Greece and Rome, in mediæval art, and in the Renaissance; suggests what are the elements of style, and shows the influence upon it of scientific discoveries. The remarks on an ideal or realistic rendering of nature—on the difference between pictorial and ornamental art—the relations of use, utility, structure, material, to artistic adornment, are among the most interesting and valuable parts of the publication.

The aids to art-instruction in France and in England lead to a noticeable comparison, not very flattering to our self-love, and will, we trust, quicken the many influences at work to remove this scandal from us. These, and a great number of kindred topics, are illustrated by examples drawn from the manufactures of both countries. We cannot perhaps better illustrate Mr. Redgrave's general tone and particular treatment of this interesting subject than by a passage from his paper on "Carpets."

"It has been held, by those who have best considered the subject, that a flat treatment should be observed for that which covers the ground we tread on; and that the imitation of mouldings in relief, or even the pictorial imitation of flowers, is improper in decorating such fabrics; while the representation of landscapes, sky, and water must be monstrous and out of place. Violent contrasts of form and colour have also been objected to as attracting the eye to the carpet, which should be entirely subordinate to the other furniture of the apartment. Therefore colour in rich low-toned masses, enlivened by abstract ornamental forms, or natural forms distributed equally over the surface, and subdued as to contrast, would appear to be the true law for the designer.

This is entirely in accordance with the decorative principles observed in those beautiful fabrics from India, which in the present, as well as in the former Exhibition, were the object of such universal admiration for the richness and propriety they displayed. But in France, it is quite evident that any principles are wholly disregarded, and that, in spite of difficulties of manufacture, and of inappropriateness when manufactured—regardless of the intrusive and showy character which is sure to result from the neglect of the law of subordination,—there is, on the contrary, in nine-tenths of the works exhibited, an effort to force the carpet into more than usual prominence, and to attract the eye to it by every possible strength of colour, boldness of relief, force of contrast, and extravagance in scale. In one work, a carpet woven in breadth, roses and poppies were measured two feet across the flower, which will serve to give some idea of the bold pretentiousness of such designs.

It must not be inferred that, when the imitative treatment of flowers is objected to, the objection is intended in any degree to extend to the use of the forms and colours of flowers in the decoration of these or other fabrics, but simply to the pictorial rendering instead of the ornamental treatment which is required. In a late discussion on this subject at the Society of Arts, an eloquent speaker advocated the natural and 'complete imitation of flowers,' and, in objecting to their conventional treatment as ornament, said, 'He knew a most respectable and long-established firm engaged in carpet manufacture on an extensive scale, which conducted its business on the opposite prin-

* *Abroad and at Home: Tales here and there.* By Miss PARDOE. London: Lambert and Co. 1857.

ciple. He referred to the firm whose head partners—the months of April and May—supplied a large part of the world with green carpets, in which floral design was largely introduced, and he believed generally to the satisfaction of the public.*

It might, however, be urged in reply, that the meadow-carpet of April and May would be but a dark and tangled maze for any but the rough foot of the labourer to tread did not art step in to render it truly a greensward carpet, to mow down its redundancy into the true velvet-pile of our shaven lawns, from out of which the buttercups and the daisies, as they spring up to spangle it with fair and goodly ornament, are as much displayed as the most rigid conventionalist would require; for the ornamental law goes no farther than to desire that the mode of representing the flower should be that which gives its truest form, its fairest colours unblotted by shade, and its most characteristic appearance,—that, indeed, which it ever turns to the warm sun and the spectator's eye as he looks down upon it. A treatment the more to be observed, that it permits of the easiest reproduction by the weaver's shuttle or the printer's block, while at the same time it also agrees with nature's great laws of growth and development."

We shall only add to this batch of new books a word or two on the new *Handbook for the Oratorios*,* which is indeed a miracle of cheapness. There is in No. I. the *Messiah* complete, arranged from Mozart's score by John Bishop of Cheltenham, beautifully printed in large octavo, containing two hundred pages, for two shillings. No. II. gives us Haydn's *Creation*, in the same style and price, and under the same direction.

THE FIRST ARTICLE OF A POPULAR AUTHOR.

By DR. DORAN.

In the middle of the month of July 1757, and consequently just a hundred years ago, old Morgan, the oldest actor then alive in England, walked slowly into the Dunciad's Head, a dull-looking house in Paternoster Row. It was the residence of Griffiths the publisher; and that celebrated personage might be then seen in the parlour behind the shop, seated without his wig, while his wife wiped his head with a cotton handkerchief. In a closet beyond the parlour was visible a young man at a desk, busily engaged in writing. He was ill-dressed, awkwardly made, and coarse of feature. He had even a heavy stupid look, as he sat intent on his labour. It was only his side-face that could be seen; but as he now and then had occasion to turn full round to Mr. Griffiths in the parlour, or as he did so, from time to time, when some remark attracted his attention, there was an expression on his features and a light in his eye which seemed to give promise of no common man. Still, his slovenly, wearied, and plodding appearance was, decidedly against him. As Morgan entered the parlour, the literary drudge,—for that was evidently his office,—blushed slightly; for Mrs. Griffiths, ceasing to polish the skull of her husband, looked sharply round, and with a voice sharper than her look, bade him "get on with the article in hand, and let her have it for approval and correction when finished." The young man did not answer, although he was evidently irritated. Around his mouth there was an expression as if he had swallowed vinegar. He sat for a moment biting the end of his pen as vigorously as the great Coligny, when in deep wrath or reflection, used to champ his toothpick. He smiled at last with mournful resignation; and then passing the not-very-clean sleeve of his poor coat over a rather begrimed face, he addressed himself to his toil, with a remark which sounded as if it had reference to the intense heat.

"Why don't you take off your coat," said Griffiths, "as I do?" But this suggestion only made the scribe button that vestment more closely round his throat. The vulgar wife of the bibliopole laughed vulgarly, and made an allusion to the person's linen, or the lack of it. The writer did not look up; but the very tips of his ears were scarlet, and he could be heard, lowly but distinctly, as though he were reading to himself rather than addressing others, uttering these words: "Ego cultu non proinde speciosus, ut facile

* London: Robert Cocks and Co.

appararet me, hæc notâ litteratum esse, quos odisse divites solent."

"My stars!" said Mrs. Griffiths; "is that a part of your review of Mr. Mallet's *Northern Antiquities*?"

"No, madam," answered the young man, with a slight Irish accent; "it is a passage in Petronius Arbiter, a gentleman who was consul in Bithynia, and who also was an officer in the house of Nero, where he lived luxuriously, and died laughing." And the speaker sighed, as if he envied the destiny of the finest gentleman and the greatest scamp of those gay yet dangerous times.

"I dare say he was a lazy fellow," said Griffiths, at the same time signing to the young writer to go on with his vocation. "And now, Mr. Morgan," added he, turning to the old actor, "what news with you?"

"Well enough with me," said the hearty old man, whose memory went back to the days of Mrs. Aphra Behn, "but ill with Garrick, ill with Barry, ill with that exquisite hussey Bellamy, and worst of all with Mrs. Woffington."

"I hate both the women," exclaimed Mrs. Griffiths, sinking into a low chair the while, and putting on an expression of very pretty horror. "But what ails them all?"

The young writer in the inner room looked round, for he was possessed with a taste for theatricals, and had at that moment in his pocket the draft of a tragedy, with fragments of scenes, the whole wrapped up in several sheets of Dublin ballads, of which he was also the author, and which, could they be recovered now, would probably prove to be as well worth reading as half the palimpsests found or forged by the clever Simonides.

"Why you see," said Morgan, "David is annoyed because he turned away Mr. Home's *Douglas*. Barry is annoyed because all the tavern-critics continue to laugh at him for dressing young Norval in a suit of white satin. Mrs. Bellamy is in distress because she could only play Almeria once throughout the whole of last season. And finally, poor Peg is ill for a score of reasons, some of which make Bellamy glad: she is ill because she produced so small an effect in *Lady Randolph*; because she produced even less in *Lothario* (at which two circumstances her rival dances with delight); and is dying at the thought that the shriek with which she finished *Rosalind last May*, when seized with her fit, is the last sound which the public will ever hear from her on the stage."

"All these susceptible ladies and gentlemen," remarked the bookseller, "may recover their healths and their tempers before next season begins. And that reminds me," he rejoined, looking into the inner room. "Pray, sir, where is your promised article on the Scotch parson's play?"

"Sir," said the pale writer, rising, and advancing to the door, "it is nearly finished. But it is not so easy to review a play as it is to read, digest, and judge a few quarto volumes of travels or biography. To enjoy and to judge poetry demands a mind akin to the poet's. Genius lights its flambeau at the skies; and mere men of earth must not be over-hasty in pronouncing upon the purity of the fire."

"O, stuff! exclaimed Mrs. Griffiths, turning her fat back on the last speaker, and showing above her low dress, worn in summer-weather, a series of cupping-marks, that seemed to designate a patient with a tendency to the head of more blood than judgment. "You might as well say that it is more difficult to make a cribbage-peg than a walking-stick."

"Not so, madam," civilly rejoined the young man, standing in the doorway; "and yet you would find it more difficult to make a watch than a warming-pan."

"I never found it difficult to do any thing," said the lady, whose conceit was notorious.

"Except to write poetry, Polly," observed her husband.

"And why should I not write verses, if I tried?" asked the lady, rather more shrilly than usual. Her husband shook his head, smiled, and was silent. "I ask," she said, "why a woman, why I, should not write verses as well as any other rhymers?"

Her flashing eye rested on the shabby young man in the doorway. And he, fancying himself peremptorily addressed, looked slightly embarrassed for an instant, and then replied:

"Indeed, madam, I believe only for this reason. Poetesses are generally indifferent housewives. *Rhyme does not, in their case, always accord with reason." Having said which, he slowly returned to his work; while the lady looked at him with a puzzled expression, as if she could not very well make out whether he had intended to be caustic or complimentary.

"You doubtless fancy yourself," she said tartly, "as famous as the authors we have hired you to review."

He looked round, with a flush on his face made up of hope and conviction of present power to be worked to further ends. "Who knows?" he asked, not of them, but of himself. "Who knows?" he repeated; and old Morgan, looking in, and gazing at that strange face with interest, saw the tears in his eyes. "Who knows?" he asked for a third time. "There is something *there*," he added, placing his podgy finger on his pallid brow. "Patience. God does not let the tide run up to high-water in an instant. I can wait." And he resumed his task, with this final remark, murmured low to himself, "I can wait. The spring will yet bloom for me. I know that he who cuts the balsam in the winter gets no juice. I can wait; I can wait."

Morgan resumed his seat; and talking in a subdued voice to Griffiths, said: "That young fellow puzzles me. I could almost swear that he was an actor in Tinseltown and Whytch's itinerant company, with whom I was starring last year. Did you pick him up at Dunstable?"

"The gentleman is a physician," said Griffiths, with mock dignity; "a physician in reduced circumstances; that is, he was so when I found him. He is now a literary man, and has just finished his first article. Poor devil! he fancies he may purchase fame by his pen; but who will know any thing of him a hundred years to come, in 1857? He will no more be known then than he is now. And the droll creature is a physician too! Not many months since he was practising in Southwark. That patch which you see on his elbow was then a hole in his sleeve, which he dexterously hid from his patients by covering it with his hat. Things have improved with him since he has been in my service; for, as you see, his coat is mended. Where did I pick him up? O, at Dr. Milner's, at Peckham. I have a nephew at school there, where my reviewer was usher. He dined at table with us. Just fancy, an usher! But Milner declares his father was a gentleman; and that we should not demean ourselves by allowing him to eat with us. And I am not sorry for it, seeing that it was a remark of his which first induced me to believe that I should find in him a capital reviewer, at a very small cost."

"What was the remark?" asked the old player.

"Why, I and Milner had been talking of our mutual regard, when the usher said, 'Modern attachments are often maintained by the same bond which united the first twin-brothers, Jacob and Esau, of whom the one loved the other because he did eat of his venison.' Pretty, wasn't it?"

"Sharp, certainly," answered the actor; "but I should not have thought that you would altogether have admired it." He looked towards the room where sat the poor hireling, and saw very well that though he was not listening, he could hear perfectly all that was passing. There was a smile on his face that made it look beaming with intellect. Morgan was benevolently determined to sustain that smile; and he did so by asking the publisher if the usher had made any other remark that was 'pretty'?"

"O, ay," replied Griffiths. "His master and I were discussing the difference between ancient banquets with their guests, and modern feasts and those who are invited to them. Well, what do you think that dog said? 'Sir,' said he, 'it is the remark of Pliny, that the dinner-givers of his day always served up poppy-seed at dessert. So do many of the hosts of our own time, and long before dessert,—to

say nothing of the quantity taken to table by the diners-out.' Now, sir," added Griffiths, "that observation was made in the spirit of a reviewer not unworthy to be of the brotherhood of the *Whig-Monthly*. All that is wanted by him we supply. I make suggestions, and Mrs. Griffiths corrects his articles. She will add some beauties to his first article on Mallet."

"Does he like that?" whispered Morgan.

"O, bless you," exclaimed the publisher, "if the fellow were to grow obstinate against it, Polly would keep him to cold meat and potatoes four times a-week, and not much of either. If that were to fail, he may pack off to beggary again."

Morgan looked towards the worker, from whose face a smile was just fading. "Mr. What's-your-name," said he, with an impudent familiarity characteristic of the times, "allow me to congratulate you upon the auspices under which you have commenced your literary life. You are in this much like Midas, gifted, no doubt, in being able to turn all you touch into gold."

"I believe," said the poor scribe, "that I am much more like that royal personage in this respect, that touch what I may, I starve."

"Starve!" said Mrs. Griffiths, who piqued herself on her liberality; "starve, with above a pound a-week, bed and board!"

"Starve!" echoed her husband. "Sir, you lack truth, and want a contented mind. Sir, I fear you did not hear the last discourse of the Rev. Eli Synnamist, at St. Benet Fink. Sir, he told us that content is such a duty, that were a man to be cast into the bottomless pit, his first word on coming to himself should be, 'I am satisfied.'"

"Mr. Griffiths," said that gentleman's retainer, respectfully but firmly, "the Rev. Eli Synnamist is no guide for me to follow. You call him a shining light. Yes; he is like one of our roadside lights, which makes a little shining on earth, but leaves heaven all the darker. I am sorry to say it, but Mr. Synnamist is a hypocrite."

"A hypocrite!" shouted Griffiths, and screamed his wife; "he is white as driven snow."

"My dear madam," said the undaunted reviewer to the lady, who snorted off the compliment as if there was something nasty in it, "he reminds me of those sheep at the altars of the ancients, which were whitened with chalk, in order to imitate the purity of the beloved lambs of the gods, which were only to be found on the banks of the Clitumnus. Do you know, sir," he asked, turning to Griffiths, "that Mr. Synnamist edits a review which professes to be independent by purchasing every book it notices, and which condemns every work which is not supplied to it *gratis*?"

Griffiths was a knave; but his dirty ideas never reached to this heroic height of soaring rascality. He fairly screamed with indignation; and his wife heightened the din by a few notes peculiar to herself. Morgan added to the tumult; and it was at its very height, when a lady appeared at the door, whose coming appeased the uproar in an instant.

She was one of those bright creatures who can scarcely be described, and who defy criticism, except, of course, from a sister. If it be true that Lyeurgus set up a graceful statue representing Laughter, and that he bade his Spartans worship the new goddess, this was the deity herself. Eye, lip, cheek, nay, as the poet says, her foot smiled. Praxiteles might have thought himself happy to have had her for a model. Had she been by when Paris had to give away the apple, it would not have fallen into the bosom of Helen. Semele was only a dairymaid in comparison with her; and then, she wore a saucy look,—inexpressible, seductive, subduing, inimitable,—such as the son of Semele might have worn before he took to ferment his grapes and drink deeply of the liquor. The voice sounded sweet, silvery, and saucy too, as she said:

"Good folks, when your breath comes back, be kind enough to inform me if you have in the house a gentleman of the name of Mr. Oliver Goldsmith?" Before reply was

given, she had shaken hands with Morgan, tapped Mrs. Griffiths on the cheek, and after kissing her husband, clapped his wig on him wrong side before, and broke into melodious peals of laughter, in which every one present would have joined, had they not of one accord kept silent to listen to the silvery intonations of her own mirth.

"My dear Mrs. Bellamy," said Griffiths, "I am glad to find you well enough to be out. As to Mr. Oliver Goldsmith, there he stands; but may I be bold enough to ask what you want with my servant?"

"Don't be impertinent, Griffiths, nor use false terms. Mrs. Griffiths, you should teach your husband better manners. You can't? Don't I know it, my dear? Mr. Goldsmith, I have read the specimens you have sent me of your intended tragedy, and they will not do. Now don't look downhearted. I commend to you the maxim of our German trumpeter in the orchestra—"Time brings roses."

"Alas, madam," said Goldsmith timidly, "even if it be so, shall I ever reach them without picking my fingers with the thorns?"

"Of course not! Why should you? Who does? As long as we can pluck the roses, never mind a scratch or two. Every body has a thorn. Even wealthy Griffiths here feels the smart of it. Who is Griffiths' thorn, eh, Mrs. Griffiths?"

"Madam," said that lady, who hated Mrs. Bellamy, "I hope she is not."

"I hope so, too, my dear," answered the actress; "and I did not say she was. I only asked a question. And, then, we have all got our pleasant little faults, which we must strive to amend—some day." (This was said with a saucy look.) "Have we any thing else that is objectionable, Mr. Goldsmith?"

"Well, madam," said Oliver, "I dare say we all have,—our vices, which we surrender, as Laïs the courtesan did her mirror, when she grew old, and found no more pleasure in employing it. Our hopes, I trust, we may always retain. Do you bid me keep mine?"

"Bid you! Young man, there is stuff in you that shall make people talk of you centuries to come."

"And love me?"

"And love you. Some of us will be despised, and some forgotten, when you, sir, will be honoured; but you must not write tragedies. You have the most charming style possible, but no more suited to tragedy than my muslin slip to—to Titus Andronicus. What have you done besides making these attempts on stilts?"

"I have only written a trifle," said the author modestly. "It's my first article,—a review of Mr. Mallet's *Northern Antiquities*."

Mrs. Bellamy made a comically wry face, shook her head, and then remarked, "I dare say it is as bad as your tragedy."

"Probably," replied the perplexed author.

"And perhaps not," good-naturedly exclaimed the actress. "Will you come and take a dish of tea with a queen, and read this article to her majesty?"

"Queen!" cried the two Griffithses. "What queen? We have no queen since the demise of her most gracious majesty Queen Caroline. He take tea with a queen?"

"Ah, dear stupid old folks, Mr. Goldsmith has more wit than both of you; and old Morgan here, I see, knows of a queen in England not yet defunct. Now, sir," she added, "put your manuscript in your pocket, and come along." She glanced rapidly at his coat, slightly curled her charming and ineffably impertinent nose; and then, with a "pshaw," and a stamp of her little foot, as if annoyed with herself, she exclaimed, "My chariot waits; let us go."

She swept through the shop like a graceful vision; and as Goldsmith, his hour for labour having expired, prepared to follow her, Griffiths put his hand on his sleeve, and asked with great simplicity, "Mr. Goldsmith, who is the queen you are going to take tea with, and to read to her your first article?"

"Queen Roxalana," said Goldsmith, with a smile.

"O," exclaimed the publisher and his wife, "the cha-

racter she plays in *Alexander the Great*! It is only herself."

"Only herself!" returned Goldsmith. "She, herself, is worth to me a throne-room full of queens. She has encouraged me with a hope of fame and the love of a generation to come. The promise is an inducement to labour, and I will endure much for the great recompense."

"Ah, sir, I see, from the company you keep, you will be a miserable writer of comedies, or some such trash. Sir, you will die in the Mint, and be forgotten a fortnight afterwards."

"I have faith in her promise, and in my own perseverance to make reality of it. This is 1757, and I have written nothing but an article for a review. Perhaps, in 1857, sovereigns may have my collected works in their libraries, and I may be affectionately known beyond the ocean. Perhaps—"

"Now, Mr. Goldsmith," called the sweet voice from the coach at the door.

"You are stark staring mad," said Griffiths; but remember, sir, I expect you here early to-night, and at work by nine to-morrow. There is the article on *Douglas* to be concluded, and a second is to follow on Mr. Jonas Hanway's book; and I fear that this rantipole company will unfit you for steady labour."

"Cease to fear it, sir. What I have undertaken to perform shall be accomplished," and he hurried off to the impatient sovereign lady in the glittering vehicle at the door. She kissed the tips of her rosy fingers to the trio who had followed Goldsmith to the threshold; and many a queen would have given her ears—or, at least, her earrings—to have looked half so imperiously and saucily handsome.

"Humph," said Griffiths, as the carriage drove off with its well-contrasted freight, "Beauty and the Beast."

"Beauty!" cried his lady; "why she's crooked! They look like what they are—an impudent hussey and a mastiff puppy. What do you say, Mr. Morgan?"

"Well, I was going to say, Hebe and Hercules; but I would rather call them Intellectual and Material Beauty."

"Good gracious," cried Mrs. Griffiths, "what nonsense! Mrs. Bellamy, I tell you, is crooked; and Goldsmith is ninny enough to think people will talk of him in 1857. I really shall die of laughing. Dr. Hawksworth may be the darling of ages to come; but a half-starved drudge like Oliver Goldsmith—Pshaw!"

POLYGLOT READINGS IN PROVERBS.

AT ROME DO AS ROME DOES. "Wherever you are, do as you see done" (Spanish).—*Por donde fueres, haz como vieres*.—A very terse German proverb, *Ländlich, settlich*, which can only be paraphrased in English, means that what is customary in any country is proper there; or, as we might say, "After the land's manner is mannerly." The Livonians say, "In the land of the naked, people are ashamed of clothes." "So many countries, so many customs" (French).—*Tant de gens, tant de guises*. In a Palais-Royal farce, a captain's wife is deploring her husband, who has been eaten by the Caffres. Her servant consoles her with *Mais, madame, que voulez-vous? Chaque peuple a ses usages*.—"Well, well, madam, after all, you know every people has its own manners and customs."

SMOOTH WATERS RUN DEEP, or "Still waters are deep" (Dutch).—*Stille waters hebben diepe gronden*.—As still waters are not running waters, the title of a favourite play at the Olympic, *Still Waters run deep*, is a little absurd. "There is no worse water than that which sleeps" (French).—*Il n'y a pire eau que l'eau qui dort; i. e. there is none more dangerous*. These proverbs have descended to us from the ancients. We read in Quintus Curtius (lib. vii.) that it was a saying among the Bactrians, "The deepest rivers flow with the least sound,"—*Altissima flumina minimo sono labuntur*.

W. K. KELLY.

FAMILY COIN-CABINET.

SIEGE-PIECES.

So great is the increase of popular taste for matters of antiquity since the formation of our various archaeological institutes and associations, both local and metropolitan, that few houses are without some collection or other connected with antiquarian pursuits. My appearance among my friends, even for a short morning-visit, is generally the signal for the production of the box of old coins,—the hobby of some member of the family,—and in my character of numismatist, to which I have but slight title, I am called upon to name and "tell all about" certain acquisitions added to the store since my last visit.

On a recent occasion, a silver-piece, of rude workmanship, was shown to me by an enthusiastic young tyro, who hoped that its rudeness, and apparently unintelligible inscription, might prove to be indications of high antiquity and great rarity. He fancied that it might belong even to a period near that of those first specimens of coined money which I had recently described to him.

The form of the piece was that of an irregular circle, and a line of raised pearing, intended to extend all round the coin, was only successfully placed on the face of the metal on one side. On the reverse were the letters O·B·S· C·A·R·L· and the numerals 1645, with a small star above and below the inscription. On the obverse, the principal device was a rudely executed crown, under which were the letters C·R· placed between three dots, and separated by two; while beneath were the Roman numerals XII. (See figs. 1, 2.)

My young friend thought these cabalistic signs mysterious enough, and was at first incredulous when I pointed out that the 1645 on the obverse was evidently enough the date, and wondered at his not perceiving it, young numismatist as he was. Its vast antiquity was thus very obviously reduced to the comparatively short space of two hundred years. But, then, it was asked, how account for the rudeness of workmanship? That too was easily accounted for. It was a siege-piece; a specimen of that "money of necessity," as it has been termed, which princes and their deputies have occasionally struck in times of difficulty, during the vicissitudes of war, or when besieged for a lengthened period in some beleaguered town.

The piece in question was one of those struck by the unfortunate Charles I. during the civil war. The O·B·S on the reverse, to any one but slightly acquainted with the curiosities of the British coinage, is merely an abbreviation of the Latin word *obsessa*, that is, "besieged;" and the mysterious C·A·R·L· resolves itself into a similar curtailment of the name of the city of Carlisle, which was besieged by the republican forces, as the date records, in the year 1645. Beneath the crown on the obverse, are the initials of the name and title of the king; and the seemingly unintelligible numeral XII simply and plainly denotes the value of the piece, that is, twelve-pence, or one shilling.

A great variety of pieces of a similar character were struck by this unfortunate prince or his adherents; many of them much more rude than the present, as the proper means of even decent mintage were seldom available on

such occasions. The money struck in the king's name, about the same time, by the Lords of the Council in Dublin Castle consisted of rough pieces of metal, stamped with numerals denoting their weight, those of 8 dwt. 21 grs. being the most common; and they had no other device or legend. Others, however, struck after the king's consent had been obtained, bore a roughly executed device of the crown, and C·R·.

The best known siege-pieces of this reign are those of Newark. They are lozenge-shaped, and, comparatively speaking, well-finished, bearing the inscription OBS· NEWARK· 1645 on the reverse; and for the obverse, the same device as that on fig. 2. There are many interesting anecdotes connected with the siege-pieces struck by Charles or his adherents during the sieges of castles, and even private

mansions; but space will not allow me to dilate upon them at present. It will be more profitable to describe briefly a few specimens of the siege-money of other countries.

At a time when a new interest has been added to the great struggle which preceded the foundation of the Dutch republic by Prescott's brilliant *Life of Philip II.*, and Mr. Motley's remarkable history of the gallant struggle for independence, headed by William the Silent, specimens of some of the money of necessity, then issued in various parts of that country, would be very interesting. I have, however, only room for one,—that of the coinage issued by the people of Campen, under pressure from the Spanish troops that held the place against the Dutch commander, Count Nunenberg. The wealth of the inhabitants had been entirely exhausted in forced subsidies, when a further supply was demanded, which the oppressed burghers furnished by coining their jewels and other articles of gold and silver. The rude pieces then produced bear the date 1578, and the name of the place, CAMPEN, with a legend expressing the extremity to which they were reduced, EXTREMVM SVBSIDIVM. (See fig. 3.)

The next engraving, fig. 4, is a copy of one of the pieces of hastily-struck money issued during the famous siege of Vienna by the Turks. It bears on the obverse the portrait of the Emperor Ferdinand, and on the reverse the arms of Austria. The piece under description is gold; but others of silver, and also of lead, were issued at the same time. Some of the leaden ones bear the German inscription, TVHK BELEGERT WIEN, in allusion to the siege of the city by the Turks.

Among pieces of obsessional, or siege, money issued by private individuals, that coined from the private plate of Marshal Turenne is remarkable. One of these pieces will be found engraved above, fig. 5. It is stamped with the royal *fleur-de-lis* of France, and bears the legend, POVR· 30· SOLS· DE· LA· VAISSELLE· DV· MAR· DE· TVRENNE· ASSIEGEANT· ST· VENANT· 1667; in allusion to the patriotic devotion of the renowned soldier, who coined his own private plate to pay the ill-supplied troops, rather than abandon the siege of St. Venant just as it was about to fall into his power. These pieces are much sought after by French collectors.

SPECIMENS OF THE ENGLISH SCHOOL. NO. XV.

PAINTED BY JOHN GILBERT.

SHAKSPERE.

SHAKSPERE.

By JOHN GILBERT.

Does it not seem, if we pause a moment to consider it freshly, a wondrous thing,—this incessant reproduction of new editions of Shakspeare that the papers tell us of,—this continual enlistment of mind after mind, eager to throw new light on all that is doubtful in his meaning, or to make us feel more vividly the genius which we already so deeply venerate in his works?

Within the last few years we have had (to enumerate expensive publications only) Mr. Payne Collier's handsome and scholarly edition, the one illustrated by Mr. Kenny Meadows, Mr. C. Knight's Pictorial, branching out into we know not how many other forms, Mr. Singer's, and lastly, Mr. Halliwell has one now in course of issue at an almost fabulous price, and of which only some one hundred and fifty copies, we think, are printed. Of all these, we hold Mr. Knight's as beyond comparison the best. To labour sufficient to exhaust the learning of the subject he adds the poetical feeling and insight that can alone guide Shaksperian commentators through the difficulties and responsibilities of the task. Even Mr. Knight's complete edition of the poet might, we think, be improved by a freer use of the corrections of the folio discovered a few years since by Mr. Collier, and which is now so widely known. In the text itself, or in notes, an immense number of these corrections appear to us to be worthy of embodiment.

Messrs. Routledge's new edition has the advantage of coming into the field after all these numerous, and for the most part able, labourers have increased, by their independent activities, the common wealth of Shaksperian knowledge and speculation. It is edited by Mr. Howard Staunton, who has won his spurs in a very different field,—that of the chess-board,—but who has long been known as an earnest and accomplished student of the poet. To collect and compare other men's views, rather than to aim at putting forth original ones of his own, and to publish a text corrected by all existing knowledge, rather than one lighted up by brilliant flashes of adventurous supposition, appear to be Mr. Staunton's views; probably all that the nature of the case admits of. We may note, in passing, that Mr. Staunton adheres to the old form of spelling the name *Shakespeare*. We prefer *Shakspeare*, believing it—with Mr. Knight—to be the correct one.

It will be seen from the preceding observations that the publishers' desire is to produce, not so much a literary as a pictorial edition of the poet; we may say, therefore, in few words, Mr. Gilbert is the tutelary genius of the work, and he is its sole artistic illustrator. When a man is really able to grapple with his author—to sympathise with him in all his moods—there can be no doubt the result is infinitely better, because more harmonious, than when various minds contribute to the same end. Mr. Harvey's illustrated *Arabian Nights* was a case in point. Never, perhaps, was there a book issued from the press so full of all that can realise to the eye the romance of Eastern life. We can as yet only judge Mr. Gilbert's *Shakspeare* by a few parts; and subsequent issues may modify our impressions. But we incline to think he will give us an edition of the poet where any one may look from the text to the illustrations with a fair chance of being delighted with the embodiment of the poet, and of whom we can say, This is Shaksperian. No higher praise can be desired. Of course we do not intend to say this of all the designs; some are better than others; doubtless we could even point out some we do not like at all; but on the whole, we think Mr. Gilbert may be congratulated on the achievement of a new success, where each fresh attempt becomes more and more difficult.

In all labours of love it will be found that men improve as they advance. Other incentives soon die under the inevitable wear and tear of production; but this naturally increases by what it feeds on. Tested by this standard,

Mr. Gilbert's work clearly springs from the right motive. In the three parts last published the eye pauses more frequently than in any of the preceding ones to dwell on noble groupings, delicious effects of light and shade, rich traits of humour, and vigorous revelations of character. Mr. Gilbert's poetical genius, for instance, nowhere shines out more strongly than in his designs for the *Midsummer Night's Dream*, where the elves are full of fun, frolic, and ugliness,—not unpleasant, because not vulgar or commonplace,—and where Bottom rules in all his asinine glory. One gem we must individually refer to,—the moonlight meeting in the fields, under the shade of a wood, of Bottom and his fellow-actors to rehearse their play.

The picture from which our engraving is taken was painted some years ago; and we are not aware that it is intended to reproduce it in the new edition. But it is, we think, the very noblest production of the artist. He has here combined in one grand tableau the whole of the more important characters of the plays. In these few square inches of space he has managed to individualise all those wondrous creations who are ever moving about before the intellectual eye, no matter what may be its other occupations: a word—a phrase—will spring up even in the driest business haunts and hours that belong to him, and revive his spells over us. We shall not be guilty of the importuness of offering help to our readers in following out the artist's thoughts, and identifying the characters represented: there can be no mistaking either. But we should like to draw attention to the consummate art with which the whole is reduced into pictorial order, beauty, and grandeur, leaving behind not a trace of incongruity, such as must have appeared from such material in any less skilful hands.

A DAY'S SALMON-FISHING ON THE TAY.

It was a clear bracing morning, in the latter end of February, about seven o'clock, when my good friend Mr. H—, as previously arranged, drove up to the front door of my quiet and rural manse, that he might take me with him to enjoy a day's fishing on the Tay. Hastily finishing the toilet in which I was engaged, and seizing my rods and other equipments, I descended to the dining-room, and attacked with vigour the breakfast which had been prepared for me, while my friend, as he warmed himself before the fire, discussed the promising nature of the morning, and the probabilities of success in our sport.

In a few minutes our rods, landing-nets, clips, and all other requisite tackle, were safely packed on the dog-cart, and we started for the scene of operations.

We had a drive of ten or twelve miles through a rich and varied country. As we ascended the Sidlaw hills, which separate the fertile Carse of Gowrie from Strathmore, the view which opened upon us was beautiful in the extreme. The sun, surrounded with glorious cumuli of crimson-coloured clouds, had just risen over the hills of Fife, the ruby and golden-coloured light of which reflected from the broad estuary of the Tay made that noble river seem one living mass of molten gold. The craft upon its surface assumed a deep purple hue, and were seen even at the distance of three or four miles with the utmost sharpness and clearness. The splendid champaign country which constitutes the Carse of Gowrie, and which stretches from the vicinity of Dundee to the gates of Perth,—a distance of twenty miles,—lay beneath us in all its tranquil loveliness, its level surface finely variegated and broken by the castles and richly wooded parks of the nobility and gentry. As we continued to ascend we began to enter the mist, which in the early morning still enveloped the upper country. Wrapping our plaids around us to defend ourselves from the close, cold, and foggy atmosphere, we whirled rapidly onward; nothing being seen but an occasional cottage by the wayside, or a labourer plodding along to his daily toil. Having driven three or four miles, the mist began to clear in grand and curling masses,

and speedily the last wreath of it took its departure from the lofty peak of the King's Seat, leaving us an uninterrupted view of the wild country, into which we had now penetrated.

We were in the bottom of a valley, with a lofty and precipitous range of hills on the right, and undulating and wooded hills on the left. We had reached a well-known point on the road called "The Long Man's Grave." It consists of a huge boulder of trap-rock, about ten feet in length by three feet in breadth, and eighteen inches in thickness, and bears a rude resemblance to the flat gravestones common in Scottish churchyards. It lies at right angles to the road, with a dry stone dike or wall built across it. Popular tradition has made it the burial-place of the odious usurper Macbeth, simply in consequence of its vicinity to his castle. Veracious history, however, declares it the last resting-place of a tall highlander, who fell in a clan-fight in the great annual fair which used to be held at this place, but which has been for nearly a century removed to Falkirk. As we ascended a gentle eminence on the road, the far-famed hill of Dunsinane came in sight. Apart from the associations with which the genius of Shakspeare has surrounded it, by his inimitable tragedy of *Macbeth*, it is a hill which would at once attract the traveller's notice. It is entirely detached from the range of hills in which it stands by a deep gorge, or gully, on either side, and is of the form of a nearly regular cone. The hills on either side are superior in height, and their summits are covered with heather and furze; while Dunsinane is clad almost to the base with a smooth and thick sward of beautiful grass. In the gorge, which separates it from the hill to the east, in the precipitous face of the cliff, there is a striking profile of the late Duke of Wellington, formed by the different masses of trap,—a suitable monument of nature's own rearing to that illustrious man. On the summit of the hill the remains of "Great Dunsinane" have been recently excavated by the spirited proprietor. The walls laid bare showed that the fortifications, though of considerable extent, could only have been of the rudest and most primitive kind. They were composed of undressed blocks, which had been formed, without cement or mortar, into a curtain, which entirely surrounded the elliptical platform which constitutes the apex of the hill. From the quantity of charcoal found among the ruins, the fortification, or castle, seems to have been chiefly composed of wood. No remains of any special interest were found during the excavations. The view from the summit of the hill is exceedingly fine. Birnam Hill, from which the invading army marched bearing the prophetic branches, is seen distinctly at the distance of ten or twelve miles. It is a spur of the great Grampian range, which, like a gigantic wall, intersects the island. Strathmore, or the great Strath, is seen stretching from Sheriff-Muir, where

"A chieft lost his faither and his mither,
And a gude braid bannet worth them baith,"

onward to the eastern coast, a distance of at least sixty miles. We drove onward through the battle-ground on which the youthful Malcolm, by the help of the English prince, and that of his faithful nobles, regained his kingdom, and the vengeful sword of Macduff made the odious usurper bite the dust; and, after half-an-hour's drive through a beautiful and highly cultivated country, reached the portion of the Tay where our piscatory operations were to be undertaken.

As we drove down the approach to the quaint old mansion-house, under the battlements of which our boatmen were appointed to meet us, we caught a glimpse of a reach in the noble river, and, to our delight, saw that it was in capital condition for our sport.

How picturesque and beautiful the old castle, into the courtyard of which we now rattled! How trim and neat its quaint old garden, with its tall cypresses and yews! What a fine aristocratic air in the old house, with its high stepped gables, and its little turrets, and its old-fashioned

windows! Its little chapel in the inner court, and the grand old trees around, impressed one with a feeling of solemnity, and made the echoing footsteps of my companion and myself sound harsh and dissonant. The site of the mansion has been chosen by the ancient architect with consummate skill. It is perched on the top of a precipitous bank, by the side of a deep gorge, through which runs a little brawling stream, and at a bend in the river; so that from its windows the broad and sweeping Tay, with its finely wooded banks, can be seen for more than a couple of miles.

Issuing from the castle by a small postern gate, we descended by a winding path to the brink of the river, and found our boatmen awaiting us. A council of war against the salmon having been held, it was determined to begin about a mile above the point where we now were, in order that we might fish downward. Depositing our heavier traps in the boat, and each taking a rod in our hand, my companion and myself walked by a beautiful path among trees and shrubs to our station, in order that we might have a few casts while the men were towing the boat up the rapid stream. The rods were speedily mounted, the lines quickly run through the ample rings, or *mylies*, the cast-lines affixed, and the most tempting hooks attached. A few initiatory swirls and casts to see that all was right gone through, when the hooks were delicately deposited on different parts of the deep and eddying pool before us; but, notwithstanding the delicacy of the casts, and the fact that the one hook was a "black dog" of Mrs. Hogg's own manufacture, and the other a "wasp" of the right mottling and colour, nothing arose. Again and again the supple rods bent, and the whizzing line was stretched far across the stream, depositing the hooks over the spots where the lordly fish were lying; but "the monarch of the tide," as Smollet designates the noble fish, as yet, would not be enticed. Stepping upon a ledge of rocks which projected a little way into the river, my companion, by a dexterous cast, made his hook alight on the farthest edge of the broken water. In an instant whirr went his line, and up went his rod; with one dash the hooked fish ran completely across the river, and leaped a couple of feet from its surface, discovering his clear and silvery side to our enraptured gaze. From the run and the glance we were persuaded it was a clean fish, and therefore prepared ourselves for a protracted contest. The salmon rapidly recrossed the river, and my companion as quickly as possible regained his line. Feeling himself encumbered, the fish appeared to lie sullenly at the bottom, till another twitch made him take another dash up the stream. The distance run was, however, much shorter, and again he sullenly laid himself upon the ground, resisting the steady strain which was kept upon him. Again a sudden twitch from the line set him in motion; but now he seemed to feel it necessary to husband his strength. Still the remorseless hook continued to goad; and the now wearied fish began to sink and rise alternately, without moving much from the spot where he had lain down, seeming to hold his ground chiefly by presenting his side to the action of the stream. The struggle lasted for a few minutes; but the steady strain from the elastic rod at length overcame the exhausted muscular energy of the sickening fish, and he was gradually drawn towards the shore. As we were without a clip (which is a large steel hook fastened to the end of a stout handle about three feet long, for striking the fish) or landing-net, I prepared myself to get, so soon as it should touch the beach, between the fish and the river, and pitch it high and dry. As it neared the shore, we saw it was a beautiful fish of twenty pounds weight. In my eagerness I moved too soon; when the salmon, catching a sight of his enemy, suddenly turned, and made a last despairing rush into the river for life and liberty. But it was all in vain; the steady strain again brought him rolling and twisting feebly to the same spot, and he was at length pitched a couple of yards from the river upon the grassy bank. And so we killed our first fish.

On the arrival of the boatmen with the boat, we rigged out

another couple of rods, having resolved to "harl" the water. It may be necessary to explain to those not initiated into the mysteries of angling, that "harling" is a peculiar method of fishing a large stream. It is thus accomplished: three or four rods are projected over the stern of the boat, at an angle of about forty-five degrees. About fifteen or twenty yards of line are allowed to depend from the points of the rods, with the hooks or minnows attached. The boat is then rowed from side to side of the stream, allowing it at each crossing to drop a little with the current. Great skill and judgment are necessary in working the boat, so as to make the hooks play properly as they cross the best parts of the stream. The anglers sit with the butts of the rods at their feet, and their faces to the hooks, ready, on the striking of a fish, to seize the rod and work it. Our boatmen were thoroughly acquainted with their work, one of them having fished the river almost daily for upwards of half a century. Old Willie knew well every pool and eddy and head where there was the slightest prospect of a fish. The day was beautiful, the river in splendid condition; so we began with every prospect of success. It is necessary, however, to remark, that in the month of February, although there is plenty of fish in the rivers frequented by the salmon, comparatively few are clean; the great majority are what are called in this district *kelt*s or kippers, the former being the female fish, which, having spawned in the upper part of the river, are on their return to the sea. From having been so long in the river, they are generally in a lean and miserable condition, their flesh being white and unpalatable, while their gills are filled with worms. The latter are the male fish, which, having shed their milt, are also on their way to the ocean. Their condition is generally a little better than that of the female fish.

Having fished a considerable time without any success, we approached a head, on which the water was somewhat troubled, when the point of one of my rods was suddenly bent, and the line dragged outward with considerable velocity. A fish had struck, and I was in great excitement; but Old Willie's practised eye at once detected his genus, and his judgment considerably damped my expectations. "Only a yellow trout, sir," exclaimed he. The slowness of the strain upon my tackle convinced me that Old Willie was correct; so the trout, struggling and spluttering, was hauled in by main force. It was a trout, in tolerable condition, of a couple of pounds weight.

The tackle being again put right, we zigzagged down the noble stream, admiring its steep and beautifully wooded banks, amid the tall deciduous trees of which the wood-pigeons were cooing and fluttering from tree to tree, scarcely disturbed by our proximity. Whirr went the reels of a couple of rods almost at the same instant, and we sprang to our feet, elevating at the same time our rods, which were bending as if they would snap with the strain. After the first run, my companion and myself were put on shore, that we might work our fish from the bank, the only alternative in such a case, as the one fish might seek up the river, while the other might make downward, when of course the boat could be of use to neither fisher. A certain tugging of the line made me suspicious of the character of my fish; and in a little time his large fins and dun and yellow back, as he rose lazily above the surface, made the matter certain. It was a *kelt*, beyond all doubt; so putting on as heavy a strain as my tackle would endure, he was dragged to the edge and netted. As Old Willie extricated the hook, and denuded him of his dorsal fin, he pronounced him "the poorest brute" he had seen. Being thrown into the river, he glided lazily into his native depths, to find his way to the great feeding-ground in the German Ocean, and to return in prime condition in a few months, and show better fight the next time he encounters a hook. My companion was obliged to follow his fish a considerable way down the river, but at length secured him, and found to his chagrin he also was a *kelt*. Again we were afloat, and speedily had fish attached. But it would

far exceed our limits to relate all our adventures and misadventures during that long and pleasant day. We had abundance of exciting sport; and when, in the dusk of the evening, we landed under the battlements of the old place, we found we had taken eighteen *kelt*s, which of course were turned into the river, besides having a run with six or eight which had broken away from us, carrying with them some excellent cast-lines, and sundry precious hooks; but what was best of all, we had each secured a clean fish, the one weighing twenty and the other twelve pounds.

Thanking our men for their excellent conduct of affairs, and handing over to them the residue of the flask, we ascended with our spoil and apparatus to the old castle, found the horse quite fresh after his long rest and his corn, and drove home by the gentle light of the lady-moon.

THE WICKED OLD WOMAN IN THE WOOD.

A CHILD'S STORY.

A FROWNING fortress, and two or three narrow streets gathered into its shadow; a moated castle, cold and cruel, and a few miserable huts clustered around it,—these were the towns and villages of England in the days we tell of. Many people went into the woods. They were not more comfortless there than in their wretched dwellings; and if the rain dripped on them from the green boughs, it was at least bright and clean as it fell from heaven, and they had there the soft sunshine and the pure light that never entered their dark homes.

Some went into the woods from love to God, and some from hate to man. These last, perhaps, were men who found themselves grasped in the coils of some strong injustice, from which there was no other escape save this. It was hard to lose an eye or a hand because a cruel lord was angry, or a sour priest offended; better be in the woods a sound man, than rest in the town a maimed one.

So in the forest lived these two, the outlaw and the hermit; but the wicked old woman was neither of these. The hermit crossed himself when he met her, and the outlaws cursed her as she passed.

There was a beautiful wood in Devonshire, far enough from the sea to be sheltered from its gales, and near enough to give glimpses of its blue waters between the leafy glades and green arches of the forest. It was here the wicked old woman lived, in a little natural grotto formed by an overhanging rock of dusky Devonshire marble. A stream, like a silver thread, ran along at its base; glancing and leaping from rock to rock, it seemed to play and sing as it went on its way to the blue sea.

The little wicked old woman never looked at it, save when she wanted water for her breakfast or her supper. And though the rock, her dwelling, was clustered with wild roses, and the tendrils of the honeysuckle hung down before the entrance, she never heeded them, save to thrust them aside with a curse for strewing her path or obstructing her way.

She had long hands, bony and unearthly to look at. They never did any gentle or kind office for human being, those hands. She dug up roots with them out of the earth. Every day, with her long nails and a rusty bit of iron, she might be seen digging wearily into the hard ground, searching for roots.

There were thousands of violets in the wood, and she often knelt on them, or trampled rudely on the delicate white and purple flowers in her weary diggings into the stony ground; but she never gathered one, nor felt her heart grow tender at the sight of them.

The birds sang in vain for her. She snared them when she could; and when she could not, she cursed them. In the spring, when the soft green leaves came out on the trees, she only thought of the time when they would be lying dead and withered on the ground, and she could gather them up to make a dry bed for herself.

It was beautiful in the summer-time to wander in that wood, when the air was filled with summer whisperings, and every leaf was fluttering with life, and between the tall trees came glimpses of the still sea, glittering in the sunshine or calmly blue in the shadow of the sky.

In the winter-time,—when the slender grass was bent by the hoar-frost, or the boughs laden with white snow were glistening and sparkling in the faint sun, and the sullen dash of the angry sea as it lashed the distant shore mingled with the wistful sound of the dead leaves as the wind scattered them in the path,—the wood was beautiful still.

But it was all nothing to the wicked-old woman. With her long bony hands she clutched at the winter-berries, or dug after roots, and gathered up broken sticks for her fire. She snared the little singing-birds, and the timid hare and rabbit. She took all the blessings the wood gave, and never rendered it back a thankful word or a happy look.

There is a *why* for every wickedness; but it would be too long to tell the story of her outraged life. The sorrow God sends softens, but the misery man makes hardens the heart. The mother from whom God has taken little children cannot be wicked, for she knows there are angels in heaven waiting for her. The daughter who has knelt by her mother's deathbed, and heard her last prayer, and received her last blessing, cannot be wicked; for she would not grieve the spirit of the blessed.

The wicked old woman had never known her mother, nor nursed a child on her knee. Throughout her long life there was no happiness to look back upon the memory of which might soften her; no love, no tenderness, she had clung to whose remembrance now could bring tears into her withered eyes. All was injustice, wrong, and misery. God had pity on her, man had none.

One day she sat rocking herself to and fro at the entrance of her cave, her long black hair streaming over her face, and her dark eyes looking fierce and glaring, as she sat there in the deep shadow of the overhanging rock. The little stream rippled calmly at her feet, trickling over the pebbles with a gentle sound, that seemed to tell of summer gladness, and the long tendrils of the woodbine waved above her, mingled with the clustering June roses.

She rocked herself to and fro, her withered eyes watching the motions of a dead leaf—dead even in summer—that the idle wind was whirling over the quiet brook.

Suddenly a shadow fell into the clear water, just where the leaf was about to drop. It was a little child, with white robe torn with thorns, and feet bare and bleeding from his weary wanderings.

Standing by the brook-side, he bathed one tired foot in the stream, and watched smilingly the pure water rippling over it.

The old woman started up, and with fierce and angry gesture heaped curses on the child, whose blue eyes gazed on her wonderingly and full of pity.

"You shall not bathe your feet in that stream," she screamed. "It is mine."

"It is God's," said the little one.

The answer angered her into madness. Darting back into her cave, she seized a burning brand from the fire, and rushed upon the child with murder in her words and looks. With one bony wicked hand she clutched him by his golden curls, and with the other raised the brand high in the air to strike; but at that instant the sun parted the clouds in the sky, beams of glory came down from heaven, and formed a halo round the golden head, soft wings rustled over him, his white robe descended to his feet in glittering brightness,—an angel stood before her.

The old woman fell on her face, expecting instant death; but, instead of that, a gentle hand was laid upon her head, and a voice like the sound of lingering distant music said, "Fear not."

She knew the angel was gone, because the shadow of his glory had faded away from the brook, and the waters mirrored now only the gray flocks and clouds of the summer sky.

Still she lay there on the earth till the night breeze blew chilly over her, and the stars came out one by one; then she rose slowly, and went into her cave.

No one saw her for a fortnight, and then the hermit met her. She had a bunch of roses in her hand, and her face was very pale. He asked her if she had been ill.

She answered, "No;" but she had been wrestling with an evil spirit.

To the outlaws she gave the same reply, and they believed her literally; but the hermit knew she meant herself.

It was only a short time after this she saw the child again.

He bathed his bleeding foot in the stream, and watched it smilingly, as she had seen him do before. Trembling and wondering, she looked on, till his blue eyes turned on her inquiringly, and his little hand raised in the air beckoned, "Come hither."

With faltering step she came, and, falling on her knees, whispered:

"Are you an angel?"

"I do not understand you, good woman," replied the child.

She started up, and burst into tears. He had answered her in the language of her childhood, the language she had not heard for fifty weary years, since she was a girl of twelve, and was stolen away from her French home by English pirates.

Yes, it was the old French tongue, forgotten now in France itself.

But it was not forgotten then by her. In the deep recesses of her heart it lay like a shrouded treasure, the sole thing till now she had worshipped.

She flung her arms around the child, for she saw he was no angel, and in his own tongue implored him to speak again.

It was nearly her own story he told. A French and English ship had met, and fought fiercely. The French ship was taken, and the innocent child was the only creature allowed to live. The sailors had landed that day for water, and he, wandering away from them, had lost himself in the wood.

The ship was his home, and, in artless words, he asked her to take him back to it.

He was from her own country, he spoke her own tongue, and she had seen him come before to her dwelling as an angel; no wonder she was unwilling to let him go, and gazed wistfully at the sea, as, carrying him in her arms, she journeyed towards it.

The beach lay five weary miles off; but she said nothing, though the child was heavy and the way was long. And it was with a joyful heart she pointed to the white sail far out at sea, and thanked the Providence that made the child her own.

She comforted him as he wept for the loss of his rough home; and, with his little arms around her neck, and his soft face pressed against her withered cheek, she turned back to the wood. But not to go straight home; many a mile she went out of her way to beg for milk and bread for her new charge.

The rough peasants gave it willingly, with wondering eyes gazing at the child's beauty and the changed look in the old woman's face.

The sun was sinking when she laid him on the bed of leaves in her cave, and busied herself to make a fire to warm his bread-and-milk. She sat rocking herself to and fro, watching him as he ate, while he prattled to her in her own tongue, till the tears swelled into her eyes, and trickling one by one over the withered cheeks, fell slowly into the fire.

The child seeing that, put down his porringer, and asked, softly:

"Was your father killed at sea, granny?"

"No, my child."

"Did the sailors take you away?"

"Yes, my child," said the old woman, her lip shaking.

"Were you a little child like me?"

"I was a bigger child than you, woe is me," said the old woman. There was agony in her voice.

The child looked at her with earnest eyes, and then slid his little hand softly into hers.

"Granny," said he, "we will forget it together."

When she felt the clasp of those tiny fingers, soft and warm, holding her bony wicked hand, she trembled, and cried, that "God was too good to her, wicked as she had been all her life."

Then the child, to comfort her, smoothed her cheek with his hand, and whispered:

"You'll be good now, granny, and God will forgive you."

He knew not what wickedness was, and he had no loathing for her sin, her age, or her withered ugliness; tender and caressing, and forgiving to all, like the angel by the stream who had laid his hand upon her head.

Whispering to her that he would have her for a mother, because his own mother was now so far away, he climbed on her knee, showing her his swelled foot, and asking her to "make it well."

Carefully she bathed and bandaged it; and then taking him in her arms again, he talked of the sea-fight and his dead father in a sad tone; but then, remembering his little sister at home, and the rabbit she had promised to tend in his absence, he laughed again, and said, "He would soon go back to France to see her, and take old granny with him."

Thus talking, he fell asleep; and she laid him gently on the bed of leaves, and watched him as he slept.

The moonlight, as it glanced in between the honeysuckle branches, made the child look pale, and then she gazed at him, sighing; but the red fire, as it rose and fell on the rude hearth, lent a ruddy glow to his fair cheek, and then she smiled.

* * * * *

All that summer-time the child and the old woman went hand in hand through the wood. He soon got to know where the birds sang the merriest, where the flowers grew the brightest; and he laughed joyfully as he made the old woman reach him the highest branches of honeysuckle and the wild clematis that hung from the trees. They took home such bunches of flowers every night that the cavern was strewn with them. And in remembrance of the French rabbit, he soon had a little English one, for whom the old woman never forgot to gather the fresh leaves it liked.

By her own labour, too, in collecting wood for the peasants and herbs for the sick, she earned enough to buy a goat; and all the milk was for the child. The coarsest food had served for her; but now she made a rude oven in the rock to bake him better bread than the peasants could give. And she spun and knitted for him for hours, as he played on the sands, and she sat on the rocks near him. The beach was his favourite spot, and the five miles were nothing to her when she carried him.

And so the summer passed away, and the autumn, with its rich berries, its wild fruits, and showers of hazel-nuts, and then the winter came.

The child was still the little bird of her dwelling, singing in the snow as he had sung in the sunshine. He went every where with her in her long walks to fetch meal to bake, and wool to spin, sometimes sitting on her shoulder, or lying in her arms, and sometimes running by her side, and always bright with happiness.

He saw a thousand things the old woman had never seen before. Sometimes it was a new flower, a curiously twisted leaf, a shining pebble, or a broken shell; but whatever it was his earnest eyes had fastened on, he would have it, whether it were high up on a thorny bank, or deep below on the rocks and shingles. Those little nimble feet surmounted all difficulties, and the eager hands, that made the old woman laugh—they were so small—seized the treasure, and held it fast, examining it curiously.

How she watched him with glistening eyes! And in places he could not reach, she put down her basket and went for

him, often over the sharp jutting rocks, where some white pebble glistened in the sun, while his little hand outstretched pointed anxiously to it, and the childish voice, in eager accents, cried, "There, there, dear granny, that's it."

Alas, she could not bring the sunshine with her; and when it lay dull and dark in the tiny palm, his blue eyes fell on it wistfully, and he would ask, "Where all the sheen was gone?"

Pointing upwards to the sun, she would tell how he had lent some of his glory to it for a time, making a worthless pebble seem a gem; and he, holding it in his rosy fingers, turning and twisting it about with curious inquisitive eye, would gaze upwards at the dazzling beams, and again at the dull stone, with looks of wonder and of love.

The summer came again; and the child, the old woman thought, must be five years old, and should be stronger now than last year; but it was not so. He no longer laughed so merrily when she shook down the June roses on him, or threw the honeysuckles into his lap. And on the sea-shore, instead of building his mimic castles and forts, he would come and rest his head on her knee, and gaze with fixed eyes over the blue waters.

"Why look over the sea so earnestly, my child?" asked the old woman one day.

"France is there, and my little sister," said he, shading his eyes with his hand to gaze out further still.

She caught him up in her arms, and hurried away; but glancing at his blue eyes, she saw they looked stedfastly at the sea, till the tall hedges hid it from his sight; then, with a deep sigh, he laid his head on her shoulder, and fell asleep.

He did not ask to go to the shore again for a long time.

When the autumn came he was very pale. "It was the heat," she said; and she carried him oftener than before. When the winter came he was paler still, and then she said "it was the cold." And she heaped wood on the red fire, and made his bed at the back of the cave, far away from the frosty air.

At last the time came when she could deceive herself no more. The child lay on the yellow leaves, white and wasted, fast dying.

It was an agony to her to be obliged to leave him while she went to fetch the needful food and other things; but, coming home, she never forgot to gather the flowers he loved; and bringing them to his bed, she would put them into the little wasted hand held out for them.

One day in February she was on her knees in the wood, searching anxiously, and two of the outlaws passed.

"Are you grubbing up roots there, Mother Beelzebub?" asked one.

How she would have cursed him once! Now she answered mildly, "No, she was looking for violets."

"Violets!" cried the robber, with a loud laugh.

"Hush!" whispered the other, "'tis for the sick child. I saw some in bloom yesterday," said he. "Yonder, mother; round the old ash-root."

He pointed to the place; and thanking him, she went to gather them.

When she put them into the child's hand he was so pale, that she fell by his side in terror and anguish, thinking he was dying.

Raising himself in the bed, she felt his arms twined around her neck, and she heard him say, "Granny, I think Jesus is come for me."

"Not yet, my child, not yet; I cannot bear it," she cried.

"Granny, I have told Him I cannot die here; and He says the angels shall come for me when I am in France."

Lying down again, he remained silent and thoughtful; while she stood over him, with such a look on her face as he had never seen there before.

All that night, whenever the child opened his weary eyes, he saw her sitting by the fire, rocking herself to and fro. When he moaned and asked for drink, she was kneeling

by his side; but when he was silent or seemed to sleep, she went back by the fire, and rocked herself to and fro.

The next day it was the hermit who watched by his bedside, and the next day too; but in the evening she came back, footsore and weary, and falling on his bed, clasped him tightly in her arms, crying out,

"O, my child, you will get well now, for you will see France."

With flushed cheek and eyes bewildered, he started up; while she told him she had found a ship to take them, going to sail in April; and she would go with him, and give him safely to his mother.

She did not tell him that in giving him up she yielded her life, and that she had spent for the passage all the money she had saved through long years of sin to pay for masses for her soul.

No need to tell him to get well. Day by day he grew better. She brought him home news of the first bird's-nest she had found, and he went himself to see it, and made her lift him up twenty times to look at the shining eggs. The cave grew bright again with spring-flowers, snowdrops, wood-anemones, and lilies.

He was too weak to go far; so he played by the brook-side, where she had seen his angel, and she sat under the rock spinning. But she often let her wheel rest while she watched him with wistful eyes that were ever saying, "Farewell."

All his talk was of home, and his sister, and his dear mother. Then April came, and she carried him to the seaport, and sheltered him in her arms through the voyage.

They did not land in the town whence his father's ship had sailed. He had remembered the name when he first came to the cave, and she had treasured it in her memory; so now they had many weary leagues to traverse, and it was bright June before they neared his home. She begged her way on, and they wanted for nothing on the road; for his beauty and the story of his orphanage moved all hearts.

When they got close, quite close to the town, she walked very fast and eagerly, as if there were some fierce struggle in her heart, and she feared the evil would conquer.

Once in the town, the little Gabriel's house was soon found. It was the best there, with a bright garden, and windows covered with twining flowers. Every one knew the story of his father's ship being taken by the English; and one sailor, who had escaped, recognised the child with a shout of joy. A crowd of wild, excited, happy people brought them to the door, while others ran to the church to ring the bells for his return.

And now his little sister ran out, crying, "Gabriel, Gabriel!" and fell on his neck with many tears; and his mother stood fainting by, kneeling to thank God, and then kneeling to thank the old woman; and then, clasping her child in her arms, speechless and sobbing, she went into her house, followed by her weeping friends. All was passionate exclamation, wonder, and joy. But in a few minutes they missed the woman who had brought them all this happiness.

She was gone; she was already a weary mile on her way. How could she stay there to see him taken by another?

She never knew how pale his little face was as he clasped his hands and implored her to come back; she never knew how he cried for her that night, till his own weary sobbings sent him to sleep.

She was lying then in the shadow of a great elm, looking up at the silent stars, and murmuring, "It is enough now, O Lord."

I cannot tell you of her weary journey home, because I should weep. She had not the heart to beg now, so she was in want often; and every spot reminded her of him. Here he was tired, and she had put him to sleep on the soft grass, and had sat, like Hagar, over against him, watching him. There he had played, binding up the flowers she had gathered, and laughing as he put them against her withered cheek, "to make his ~~face~~ pretty."

Here was the bank where he had sat eating his dinner so merrily, while she fetched him fresh water from the brook.

O, how cold and dark the road was without him! Every thing was dead.

She never looked up now; she knew when she was in a wood by the fluttering shadows of leaves that fell over her or flickered on her path. They made her shiver, those shadows, and so did the bright sunshine when it poured over her in the open meadow or on the broad road.

She got home at last, she knew not how, to the old cave, and began her old life again. But often when she went out for roots, she forgot them, and gathered flowers instead, and brought them home, and laid them on the dead leaves where the child had slept.

In her wanderings, too, she would stop to pick up a shining pebble, or crimson leaf glittering with dew, or many a feather dropped from bird's wings, lying in the wood, forgetting she could not give them to him now.

She laid them all on the little bed till he should come back. The brown rug the kind nuns gave him was there still. She would not take it, even when the weather was at the coldest. At night, as she sat by her fire, she watched for his laughing face to peep from under it, and to hear his rosy lips cry, "Granny, granny."

Of an evening, in the old days, he would do this twenty times; and she heard the childish voice still crying, "Granny, granny."

But sometimes the little couch of yellow leaves looked dead, and she would fancy he was there covered up, but cold; and then she would tremble very much, and cry a little.

And thus the autumn and the winter glided away. She was a worn woman now, minding herself so little, that I think she must have starved if the good hermit had not helped her.

She never forgot to lay flowers on the child's couch, though she so often forgot her own roots and berries. Every night she knelt by the withered leaves to pray; and when she rose from her prayer, she always said, "God will let me see him again."

One day in the early spring, just as the snowdrops were peeping from the earth, a rough sailor came to the cave. He had spoken a French ship, and had promised the captain he would find her.

Little Gabriel was dead; and he had sent a message to her to say he should see her again.

"Well, she had known it long ago; she had always known he would die. Had she not seen his angel?"

That night, when she hid her face in the withered leaves to pray, she said as usual, "God will let me see him again."

A few days after this, the hermit coming to the cave, found her on her knees by the child's couch, a little bunch of white violets in her hand. He touched her. She was quite dead.

The priests said no masses for her soul, because the money was spent in the voyage to France; but I think she saw little Gabriel again in heaven.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

Is there any reason in the world why the etiquette and practice of the bar should be at variance with the common rules of morality and good breeding which regulate society? Does a barrister, the moment that he puts off the habiliments of private life and dons the gown and wig, enter at the same time into a new nature, and become invested with

BÉRANGER.*

privileges peculiar to the character which he then assumes? In fact, can a few pounds of horse-hair and a few yards of stuff, by any known law or admitted necessity, place a person above the ordinary duties and responsibilities of a man, a neighbour, and a Christian? We never read the records of any important criminal trial without being assailed by these inquiries. Take the last great trial on record as an instance; and be it understood that we do not point particularly to this trial, or to the able and distinguished lawyers who were engaged in it, but to the general practice, of which the Edinburgh case affords the latest example. Now, bearing this trial in mind, what is the impression derived from the speeches of the counsel on both sides, as regards their own personal and individual conduct with respect to the guilt or innocence of the accused? The counsel for the prosecution sets out with a firm but assumed conviction that the prisoner whom he has been instructed to prosecute is guilty of the deed, of which she is accused. His settled purpose is avowedly to procure a verdict against the prisoner, come what may. Of that purpose he never once loses sight. He has his game to make, and brings all the skill of which he is capable into play to make it. He takes the evidence which has been adduced before the court, and twists and turns it to his advantage, sparing neither eloquence nor sophistry in the effort. Where a link of the chain is weak, he endeavours to strengthen it by welding an inference into it; where a link is wanting, he does not scruple to fill the gap with the assertion of a personal conviction. We should say it was rarely indeed that an able advocate does not succeed, while he is yet unanswered, in proving his case to the satisfaction of the general auditory

* A Memoir of Béranger will appear in our next Number.

of a court-house. Now comes the counsel for the defence. Like his learned brother, he too sets out with an assumed and settled conviction,—that conviction being, that the prisoner at the bar is “not guilty.” He has also his settled purpose,—that purpose being to “get the prisoner off” at all hazards. To this end, throwing aside all reasonable judgment, all regard for what is true and what is false in evidence, shutting his eyes to the ends of justice and the interests of society, he proceeds to meet argument with argument, sophistry with sophistry, and to oppose his own assumed personal convictions to those of his adversary. This is no doubt following up what has been laid down by eminent authorities as the whole duty of an advocate. Lord Brougham, who may be considered one of the very highest authorities in these matters, lays it down that an advocate is bound to do every thing that can be done for his client,—to smother all feeling with regard to others, to spare neither age nor sex, feeling nor character; in fact, to use every effort, and to employ all and any means within his reach for his client’s good. But is this dictum to be accepted as an unalterable and unerring law? It was delivered by Lord Brougham at a time when he himself was working his way up to the high position which he has since attained by the exercise of the advocate’s art and profession, and when he may have had his own conduct to excuse and defend. But we opine times have changed since then. Morals, politics, the principles of government, and the social duties, have all undergone a marked alteration—an alteration which has been brought about by an access of enlightened ideas. Is the practice of the bar alone to withstand the influence of progress? Are the principles of advocacy enunciated thirty years ago alone to defy the light of improved intelligence?

What is the result of the undeviating adherence by the legal profession to the dictum referred to? Simply this: an advocate claims the license of his wig and gown to do and say things which as a private gentleman he would shrink from. Put the advocate in the position of an unconcerned spectator, and you at once reduce him to the level of common feelings and honest judgment. If he be a just man, his anxiety will be, that justice may be done, spite of argument and forensic skill. If he be naturally a merciful and tender-hearted person, he will probably give way to sympathy and pity. Such a person is swayed by his reason, his instincts, and his love of truth. But the advocate throws all these sentiments and emotions behind him: he encases his breast in triple steel, and fights, not for the vindication of truth or the triumph of justice, but for the vindication of his own skill and the advancement of his own reputation.

Will any one, having a sense of justice and the feelings of a man, say that this should be the undivided aim of an advocate? Is it necessary for the ends of justice that the counsel who prosecutes an accused person should strive without evidence to obtain a conviction? and, on the other hand, that the counsel for the defence should insist against evidence for an acquittal? We think not. It may be argued that there are the judge and jury to weigh the evidence and arguments for themselves. True. We do not say that trial by jury is a failure. On the contrary, we believe that instances of the miscarriage of justice are exceedingly rare. But this does not exonerate the advocate from the charge of exceeding the bounds of propriety and fair play. It is not the advocate's fault that there is not a miscarriage of justice every day in the week.

The trial of Courvoisier for the murder of Lord William Russell affords a memorable instance of the excess into which counsel are led by an adherence to the duty of an advocate as laid down by the oracles of the profession. Mr. Phillips, Courvoisier's counsel, solemnly declared his belief in the prisoner's innocence, after he had heard from the prisoner's own lips a confession of the crime. In Palmer's case, again, it will be remembered that Serjeant Shee attempted to influence the jury by a similar declaration. The trial of Miss Madeline Smith affords the latest example. Here the Lord Advocate insisted that it was clearly proved that Miss Smith had poisoned Mr. L'Angelier on a certain day, though he had failed to adduce evidence to prove that they had met on that day. His efforts in this way only excited the Dean of Faculty to a similar stretch of the proper functions of the advocate. "I cannot help seeing," he said, "that if there be a failure of justice here" (that was to say, if the prisoner be found guilty) "it can be attributable to nothing but my own incapacity to conduct the defence; and I protest to you, that if it were so, the recollection of this day and this prisoner will haunt me as a dismal spectre to the end of my life."

The judge very properly condemned the expression of personal opinion on both sides as so much "trash," which the jury were implored to dismiss from their minds.

Now we would simply ask upon this, if the ends of justice would not in every case be attained with more decency, and with less offence to a sense of right and fair dealing, if advocates would look more to the elucidation of the truth than to the enhancement of their own fame? "See what is the effect of the forensic principles of which we complain in actions for libel, breach of promise, and *criminal conversation*. The great object of the advocate is to shake adverse evidence by assailing the character of the witnesses. And how often does the advocate, in pursuing his ends in such cases, condescend to the abuse and ruffianism of the bully! He does not even spare his own cloth; his maxim being, when he finds he has no case, to abuse his learned brother. But we do not make a point of such instances. There are black sheep in every profession, in the church as well as in the law; and the person who is not a gentleman in his private relations cannot be expected to be a gentleman in his public capacity. We do hold, however, that the highest

and most honourable members of the profession have become accustomed, by use and example, to practices which cannot be reconciled with the motives and feelings of a true man of this age. Mr. Commissioner Phillips seems to have learned this lesson. A remark which he made the other day in the Court of Insolvency will serve very well as the moral of the views we have here expressed: "When I came to the bar," observed the learned commissioner, "I was told that special pleading was the perfection of reason; I have found it to be the perfection of nonsense."

TWO SONNETS.

BY THE AUTHOR OF "ARNOLD, A DRAMATIC HISTORY."

I. SUNSET FROM THE COTSWOLDS.

TURNING, I gazed o'er the hill's sudden crest,
The whole expanse of western sky to see,
Flooded with molten flame tumultuously
By the dissolving orb, whose like bequest
Gave hill and valley each some varying hue—
The fore hills purple, and the far hills blue:
Nor vainly rose the faith from thought deprest;
These shows of mortal air, too transient far,
Fate to fulfil themselves in heaven, and are
Its antitypes of splendour and of rest.
Else were those amphitheatred heights more blest
That, native to the sight, serenely saw—
Though not without a hush of possible awe—
That glory of God descending down the west.

II. MUSIC FROM THE VALLEY.

Rising in pensive softness, seem'd the strain—
Time, with a trick of sadness on his tongue,
Mourning the lost world, beautiful and young;—
Then burst into a lengthen'd wail; again
With passionate and strong desire was thrill'd,—
Yearnings impossible to be fulfill'd,
Immortal language given to mortal pain,—
As though a wand'ring angel, exiled long,
Had learned earth's sorrow yet not lost heaven's song;
Till, changing to a clear and jubilant blast,
The strength of triumph gained from suffering past;—
While that full-clarion'd song swell'd far and wide,
Surely some conquering soul stood satisfied
With, and before, the Infinite at last.

THE ENGLISH IMPROVISATORE.

By STEPHEN HUNT.

"His muse made increment of any thing,
From the high lyric down to the low rational;
If Pindar sang homo-races, what should hinder
Himself from being as pliable as Pindar?" DON JUAN.

THERE is perhaps no talent more rare in this country than that of impromptu composition, either in prose or verse, the climate of England, and the diet, education, and pursuits of the people being palpably opposed, not merely to the growth, but to the existence of it. Heavy animal food and strong drink are far better adapted to the nurture of soldiers than of extempore poets, whose talent ought at least to answer the description Dryden gives of his friend Davenant, of whom he says: "He was of so quick a fancy, that nothing was proposed to him in which he could not suddenly produce a thought extremely pleasant and surprising; and those first thoughts of his, contrary to the Latin proverb, were not always the least happy; and as his fancy was quick, so likewise were the products of it remote and new."

We know of no one now-a-days upon whom we can pass

such an encomium, and seldom hear of the existence of such a talent, unless it happens to make an evanescent display under peculiar circumstances, such, for instance, as the dilemmas in which negligent actors and dilatory authors are especially prone to involve themselves.

It is related of the veteran dramatist Moncrieff, that having, after repeated appointments, at last made his appearance in the green-room of one of the London theatres, with a manuscript drama which had been "underlined" in the bills for weeks previously, he made ample amends to the manager and company by the universal gratification which his reading of it afforded them. From the leading tragedian to the deliverer of messages, all the actors were satisfied with the parts; and therefore, when the meeting was breaking up, the copyist of the theatre expected to receive from the author the entire three acts, that he might lose no time in getting the usual copies made for the licenser and prompter, &c. Moncrieff replied by handing him only the two first acts.

"Why keep back the third?" Inquired the scribe.

The author replied with a promise that it should be forthcoming on the following day.

"But it read so beautifully, Mr. Moncrieff, you cannot possibly want to alter it," said the copyist. "Pray leave it me."

"It will be of no use to you if I do," answered the author; and, opening the first page of what every body had believed to be the third act of the new drama, he exhibited to the gaze of the astonished scribe the manuscript of one of his oldest pieces of a totally different character.

"You don't mean to say that—"

"Tush! I have not yet written a line of the third act; but you shall be sure to have it in the morning," whispered Moncrieff; and, for a wonder, he kept his word.

Still more remarkable instances of such talent have been given by actors at a country theatre, in the compulsory improvisation of an entire play, where it has been quite a fresh study, and, owing to the interruption of some town or village festival, the players have all been so imperfect when the night of performance arrived, that an attempt to follow the text could have proved only a dead failure. In this emergency, and not being able to change the performances, because they were for the benefit of one of the actors, and the first piece was a new drama that had made a great sensation in London, they have agreed, at the last moment, to discard the author's text altogether, and attend to nothing but the plot and incidents, each actor improvising his own part. Strange to say, the performance has gone off quite as successfully as if every body had been "letter-perfect."

Ben Jonson remarks, that "many foolish things fall even from wise men, if they be in haste or extempore;" and, admitting this, the utmost indulgence is due to those who, possibly without the least pretensions to wisdom,—aspire to a display of talent that depends greatly upon vigour of fancy and vivacity of imagination, prompting to extraordinary readiness of wit and smartness of repartee. When such qualifications are required, it is not surprising that an English Improvisatore should be rarely heard of; his merits being too humble to admit of his becoming even one of the most ephemeral stars that attract public attention. Inasmuch as his profession is not recognised as conventionally respectable, it is necessary that he should possess brilliancy sufficient to dispel this objection; but it is most probable that his power of shining is deficient in the strength and versatility which would have been imparted to it by a classical education, otherwise he might have been led to seek a more recognised, if not more reliable, source of subsistence. He knows nothing of the art of poesy, and begins his career as a mere rhymers, prompted, perhaps, by some vivacious acquaintance who has a brazen propensity for what he calls "capping verses," on the springs, summers, fields, flowers, hills, lakes, rivers, and pools, in addition to the innumerable eccentricities of nomenclature that meet his eye every where on door-plates and over shop-fronts. Endowed with consi-

derable facetiousness, and finding that he has an off-hand ability for more than mere rhyming, he takes every opportunity of cultivating it. Encouraged by the injudicious applause of friends, he is next tempted to extemporise a song on the names of the visitors at some private party; and being very successful, becomes imbued with an idea that he possesses a genius for poetry, and devotes all his leisure time to the study of versification; samples of which, in the shape of poetic epistles, he is continually inflicting upon his acquaintances. At last he ventures to attempt an appearance in print; and having hit upon what he conceives to be a very bright idea, sends his effusion to the editor of some minor periodical, who rejects it, with an admonitory exposition of its defects so mortifying to his vanity, that he determines to confine himself to impromptu composition. Still, however, dissatisfied with the display of his talent in private, he is induced to seek for applause in public; which he readily gains by an introduction to one of those convivial assemblies termed respectively "free-and-easies" and "mononic meetings." Here he is received with such *éclat*, and becomes so completely intoxicated with applause, that he never omits his attendance a single night, and thus he unconsciously adopts habits that render him totally unfit for any business occupation. The talent that was cultivated as an amusement is now exercised as a source of subsistence. Without the least difficulty, an engagement is obtained to take the chair at some kind of convivial meeting every night, and thus the Improvisatore realises about thirty shillings per week. For this remuneration he is expected to extemporise upon any subject that may be given him; though if, as is most probable, he is friendly with his vice-president, the latter takes upon himself to suggest a theme that has been privately agreed upon, or proposes that the matter should be left to his friend's choice; an alternative which is understood to mean one of his old songs. Sometimes, however, he is subjected uneasily to the call of a stranger; and should his response prove very successful, it forms an addition to his stock that well repays him for the effort. When free from this restriction, and presiding over an audience who exhibit peculiarities affording opportunity for humorous sketch or smart remark, he will select his characters, and improvise a song, rather personal, but very pleasant, and full of effective points. Upon these occasions he is extremely apt to use the word "sirs" as a sort of stereotype substitute for varied and legitimate rhyme, due attention to which would not only be difficult, but might injure the characteristic merit of his display. At other times he is very ready to prove his skill in the jingle of versification, especially when he happens to be acquainted with the names of his audience, and finds amongst them some favourable patronymics,—such, for instance, as Peel, Gold, or Bell,—which also afford him full scope for creating laughter and applause, by the facility practice has given him of playing upon words, though in a style which partakes rather strongly, yet perhaps unavoidably, of the *ad captandum*.

In this way he gains a reputation that not only procures him engagements at private parties and public dinners,—where he will probably astonish his audience with a parody on a new song, which, although studied at home, has all the effect of an impromptu composition,—but enables him to make lucrative benefits by his numerous chairmanships when the season for harmonic meetings is drawing to a close. Thus provided with the means of making an appearance so immaculate as to bear the ordeal of the summer sunshine, he endeavours to obtain a situation as "puff" and poet—comprising the improvisatorial responses from the "Wizard's Cave," or the "Temple of Cupid"—at some such place of public amusement as Cremorne Gardens. If he finds that the arrangements at these establishments admit of no vacancy for his services, he assumes the pen of the poet on his own account, and courts the inspiration of his muse for effusions of every description, from birthday-odes to epitaphs and epithalamiums, with an occasional descent to floral alphabets, nursery rhymes, and tradesmen's adver-

tisements. The columns of a provincial paper afford him ample scope for speculation; and having sent off a sample of verses to one or two advertisers, he most probably finds his remuneration in an order from some bazaar-keeper, proprietor of an exhibition, or perhaps a house-decorator; in whose behalf he will take the seasonable opportunity of assuring the public that they may obtain the enjoyment of the most romantic scenery, brilliant sunshine, umbrageous trees, pellucid streams, and delightful flowers, entirely free from fog, and unexposed to skyey influences, without the trouble and expence of removing into the country. As an atonement to his conscience for passing this slight upon nature, he will, most probably, expend the money so earned in a trip to Richmond or Gravesend; where, the exuberance of his felicity depriving him of the means of returning to London, he is compelled to replenish his purse by some such expedient as that of inditing a poetical bill-of-fare for the proprietor of a coffee-shop, eating-house, or tea-gardens.

If he is very adventurous, he will spend the summer in a tour through the provinces, improvising songs, &c. at taverns, and poetising a few advertisements for tradesmen in large towns. At the end of autumn, he returns to the metropolis to resume his old career; and in this manner—should he have the good fortune to be unopposed by any one of more novel abilities—he passes year after year, until late hours and long libations consign him to a hospital or workhouse, where he dies, aggrieved by having been prevented from leaving to posterity the slightest memorial of his talent—not even the usual churchyard-card, “In memory of,” to say nothing of the epitaph with which he intended to have adorned it.

A CONSIDERATE UNCLE.

A young City gent, whom his familiar friends call Jemmy Smart, and whose ease of manner behind the counter, and whose skill in deciding troublesome customers to make their choice, have long been the admiration of the feminine world, lately received a letter from a Yorkshire attorney, informing him that something to his advantage had occurred, and enclosing a five-pound note as a foretaste. It stated that his maternal relative, Robert Brown, whom he had never seen, but whom he had heard spoken of in the family as Uncle Bob, an old bachelor, much addicted to the grazing of cattle and the fattening of pigs, was lately deceased, and that the will divided the old gentleman's landed and personal property between himself and another nephew, a vigorous biped of lofty stature, belonging to the class of native domestic agricultural animals. Mr. James Smart was further counselled to ask his employer to grant him a temporary (so underlined) leave of absence, and to proceed forthwith by rail to York, previously announcing the hour of his proposed arrival to one Josiah Nixon, his late uncle's bailiff, now holding possession at The Thickets, till the rightful heir should come to claim his own. Josiah would meet him at the station with the gig.

Jemmy lost no time in obtaining the required permission; and in packing up his Sunday finery,—his shirt-fronts of finest calico, his unimpeachable false collars, his jewel-box resplendent with mosaic gold and brilliant paste of purest ray serene. He was off, with the pole-star for his guide.

At the York station, he looked out in vain for Josiah Nixon, whom he pictured to himself as a tall funkey, with cane in hand, powdered hair, and long great coat with livery-buttons. Nothing of the sort was there. He waited about impatiently for a quarter of an hour, till every one was gone, when he began to suspect himself the victim of a hoax; but after a few minutes' further suspense, there entered an aged and dusty countryman, disguised, as it were, in a linen smock-frock, such as north-country graziers wear, and looking as if he also were in quest of somebody or something.

“Pray, sir, may I ask whether your name is Mr. James Smart?” he respectfully inquired of our hero, with a certain formal politeness.

“Yes, sir, it is; and I suppose I may ask *you* whether your name isn't Mr. Josiah Nixon?” retorted Jemmy sharply.

The old man bowed assent.

“Then, sir, I must tell you,” continued James, “that it is a very bad beginning of our acquaintance that you presume to keep me waiting in this way. I have been kicking my heels here nearly half an hour.”

The veteran bailiff looked vexed and puzzled, and an expression of deep disappointment came over his weather-beaten countenance. “I am very sorry, sir, that it has so happened; but it is a long drive from The Thickets to York. The weather is very sultry and close to-day, and poor old Neddy has had a hard job of it. As soon as he has finished his corn, we are at your service, sir.”

“Very well, sir; say no more about it. I only just wish to give you a hint, that if you intend to remain in my service, you must be more punctual for the future.”

During their drive to The Thickets, old Nixon was taciturn—sulky, perhaps—leaving Mr. Smart to indulge in monologues by the way.

“What horrid dusty roads! I wonder they don't water them. But that can hardly be expected in an out-of-the-way place like this. And this is Neddy? I'm not surprised now at your being behindhand, with a great, fat, ugly, lazy beast like that.”

“But, sir,” interposed Josiah, with some little warmth, “he was a great favourite with my poor dear master, who drove him for more than a dozen years. He said he hoped you would never part with Neddy.”

“No; not part with him,” replied James, with a cunning grin, “if that's a condition in the will; but I can lend him, you know, to a friend of mine who drives a London cab, and that will put a little life into him, if whipcord will do it.”

Nixon winced as if a lash had struck his own shoulders. “There's The Thickets, sir, at last; and I hope you'll like it.”

“That old, dismal, tumble-down place! Why it's smothered up with trees; you can't look out of the windows for evergreens; and I'd bet a sovereign there's an owl in every chimney. But I'll soon alter that. I'll cut down three-fourths of those nasty trees.”

“But, sir, master planted every one of those trees himself. He would have been sadly grieved had he known that was what they were to come to.”

“Well, what business is that of yours? He's dead and gone; and it's my turn now. But tell them to let me have some dinner as soon as possible; I'm dying with hunger, and all because Neddy crawls at the rate of five miles an hour.”

Mr. Smart was received by his uncle's housekeeper, an old-fashioned dame, in deep mourning, with snow-white hair, and an antiquity of a cap. Nixon explained the urgency of the young gentleman's appetite. He was accordingly shown into a spacious wainscoted dining-room, where a circular table was neatly laid for three. In a few minutes Josiah entered, immediately followed by a ruddy servant-girl, bearing a substantial joint and smoking vegetables.

“All is ready, sir,” said Nixon. “We had better not let the gravy get cold.” And he and the housekeeper took their places before two of the vacant knives and forks, remaining standing till the heir should seat himself.

“Are you going to dine here without being asked?” inquired James. “It's an extraordinary liberty for servants to take.”

“We always dined with master in the parlour,” said the housekeeper demurely, but bridling up, “except on the days when he gave his grand dinners to the county-gentry. We thought you would like to have things go on exactly as they did in the old gentleman's time. However, sir, if we are intruding, we'll retire.”

"No, no," said James condescendingly. "Never mind for this once. You may stop to-day. Besides, you may be able to give a little information about the place, and what it is worth. "Yes; you can carve, Nixon. What a clumsy fellow! Not so thick as that, and not quite so much fat. I wonder whether the governor had any decent wine."

"This is a bottle of his very best port, which I brought up from the cellar on purpose to—to welcome you with." And Nixon made a grimace which speedily passed away, and shot a rapid glance at the housekeeper opposite.

"Hem, ha!" said James, superciliously tasting it; "rather thin, I think. I could get better than this in town at half-a-crown a bottle."

"Would you like to look at the stock, sir, after dinner?" asked Josiah, evidently uncomfortable.

"What stock?" retorted James. "I never knew that Uncle Bob kept a fancy warehouse."

"Our cows, sir, and our pigs. We have some of the most beautiful Durhams that all Yorkshire can show; and our pigs take prizes every year at the Midland Counties Exhibition."

"Nasty creatures!" was James's reply. "If I sell the place, the live creatures can go with it."

"Sell the place!" exclaimed the bailiff, turning red as scarlet. "Your poor uncle, sir, thought you might like to marry, and settle comfortably here. And what is to become of us, sir, if we are to be turned out of house and home, where we have both of us lived more than forty years, sir?"

"O, that's your look out," said James. "I had no idea of finding such a dull hole as this. And as to marrying, I'm not going to throw myself away just yet. If I swap this musty old farmhouse for a neat bachelor's villa-residence in St. John's Wood, where I can keep my cab, my tiger, and something else, perhaps, that will be a little like life, old boy." Uncle Bob's wine was stronger than Jimmy suspected. "Hang it," he continued, "if I don't go to York to-morrow morning, and ask the attorney if he can't manage it for me."

"Suppose you go this evening," blandly insinuated Josiah. "I think Neddy could do it, now he has had his corn, with a little extra whip;" and the old gentleman cunningly arched his eyebrows.

"By jingo, so we will!" cried James, greedily catching at the idea. "It will be capital fun to take down a little of that lazy brute's proud flesh. Let us be off at once."

So said, so done. Foolish Neddy neighed at starting, as if he were bound for a party of pleasure. The drive back to York much resembled the drive from it, except that Nixon seemed in better humour; the effect doubtless of the dinner and the wine. At last they reached the City of the Seven Sisters.

"Hallo! what are you about?" said James. "Where are you driving to? I'm going to the attorney, man, and not to the railway-station."

"I beg your pardon, sir," said Josiah; "but you are going to the railway-station, and back to London as quick as possible. I'm Yorkshire, you know. You'll excuse my having played you a little trick. I'm Uncle Bob, and not Josiah Nixon; and as I'm not yet quite dead, I intend making a trifling alteration in my will, which will relieve you of the trouble of disposing of The Thickets. There's a ten-pound note, sir, to pay your expenses to town and your loss of time; and I wish you every possible enjoyment of your bachelor-residence in St. John's Wood, with your tiger and cab, and whatever other additions you may think fit to make to your establishment."

E. S. D.

A MORNING WALK IN ALGIERS.

By BESSIE R. PARKES.

WE started one morning (January 27th) with our sketch-books, having at last the promise of a fine day; for the

weather during the last three weeks had been, though not cold, atrociously wet; shower succeeding shower in heavy succession, and the apparent prospect of the same to the end of time, but for the perpetual apparition of a segment of a rainbow over the Mediterranean, as if to say, "Wait a bit, and I'll clear up." This wet weather, in the midst of roses and violets and orange-flowers, seems to a European very unseasonable, especially to artists, for whom the exceeding loveliness of the land is a constant temptation and provocation. We are a mile out of town, just beyond the magnificent French fortifications which encircle the ancient precincts of Algiers. The road, though very amusing, is too dirty and too muddy to be agreeable; one meets representatives of every nation of the Mediterranean, and that list includes a pretty considerable proportion of the races of mankind. Arabs nearly run over you, driving or riding on donkeys, the long white robes dignifying the ass himself; making him, in fact, an ass of poetical and scriptural reputation, and not a mere low donkey. Sometimes it is a long-necked shambling camel, instead of our long-eared friends. No uglier animal than a camel walks upon four legs; even the hippopotamus has the sublimity of size; but these rough and lengthy individuals, however useful and harmonious in the wide sandy desert, are singularly out of place when trudging along a French road among carts and omnibuses. This again reminds me of the public conveyances of Algiers,—ancient yellow vehicles, mud-bespattered, and drawn by three ill-conditioned horses, yoked abreast. These omnibuses are lined with yellow curtains, and bear the most romantic names outside, upon their panels, such as *La belle Andalouse*, *La belle Espagnolle*. I hope that no *belle Anglaise* stood godmother to such a crazy old carriage! You can be conveyed into town from the suburbs for the very moderate price of three sous,—equivalent to a penny-halfpenny,—and may have as your companions a couple of French *militaires*, with very tight waists and moustaches; a *bonne* in a white cap, with a couple of children,—one *un petit bonhomme*, dressed like a miniature Zouave, cloth jacket, loose breeches, and tiny red fez complete; the other a small woman, aged six years, with a silk bonnet perched on the back of her erect little head, a silk mantilla frilled all round in ascending tiers, and a parasol tipped with ivory and fringe. These young people are swung across the mud and into the omnibus by their energetic nurse, she talking all the time in a shrill key to the *militaires*, and finally subsiding into a shower of observations addressed to herself, and finished off with an *Ah, mon Dieu! Ugh!* The party is made up by a *religieuse*, in ample black and white head-gear; for the Catholic Church is a living fact in Algeria, and has many establishments for purposes of worship and of charity. Among others is the Convent du Sacre Cœur, a lovely old Moorish house, surrounded by olives and cypresses. Its domed roof is surmounted by the Christian Cross, in token of consecration. But the nuns are not the only long-robed women to be met in omnibuses; I once saw one entirely filled by a party of Moresques, going out to the cemetery; acts of reverence to the dead being among the few avocations which ever take respectable Moresques from the cloistral seclusion of their homes. To which may be added, going to the bath, and a visit three or four times a-year to the mosque, which is thought enough for a woman. From those few notes and memoranda upon Algerine omnibuses, inside and out, the reader will perceive that the species is one of the most whimsical conveyances going upon wheels.

The stationary objects of interest on the eastern road into Algiers consist in a number of low shops or open stalls, kept by Arabs, for fruit, &c.; a caravanserai, where the camels put up and unload; and a huge *théâtre impériale*, of the ugliest construction, and so large that it dwarfs the low though massive Moorish houses to a lamentable degree. Presently the town begins in a street of tall French houses, shabby, muddy, and faced with poor shops for old iron articles, such as bits and stirrups, sabots, &c., for *vin et liqueurs*. Here the foot-road is being mended, and you have

to diverge into the middle of the street, where, as you are painfully picking your steps, you probably hear an Arab at your back shriek, *Balek, balek!* and are only just in time to save your bones and your dignity. I was seated sketching on a stone-post in a country road some days since, when an Arab actually drove his panniered donkey right at me from carelessness, which caused, as you may well believe, a great concussion; a most gratuitous accident, as there was ample space and verge enough for sketched and Neddy too.

On the lower road into Algiers, for there are two, you pass under a noble palm-tree, one of the few left in the neighbourhood; it shakes out its long feathers to the wind like a true child of the desert. A few steps farther bring one to the arcades, which traverse the town from east to west, running parallel to the sea. They are built under French houses, and fall back at the Place du Gouvernement, leaving a wide square space, adorned with an equestrian statue of the Duke of Orleans, and thronged, like the arcades, with a most amusing crowd, vociferating in all the tongues born of Babel, Jew, Greek, and Gentile. Here may be seen particoloured coats, such as Joseph may have worn in times of old, and *gamins* of all religions, or no religion at all. But we were bound to the old town; so we crossed the Place and bent our steps towards the Catholic cathedral. All that strip of flat land which borders upon the sea, and once formed the Roman port of Icosium, is now covered with French houses and hotels, to the great detriment of the picturesque beauty of Algiers; but above this strip, the town rises in a steep pyramid, built chiefly of Moorish houses, closely wedged together, terrace above terrace, and of dazzling whiteness.

The Catholic cathedral stands immediately behind the Place, upon the first slope of the hill; a large ugly building, once a mosque, but now faced and defaced by stone blocks, and two clumsy towers. Inside, the walls and ceiling are covered with Moorish tracings, in white plaster, which have a singular association in a church devoted to the ceremonies of the Christian religion. It seemed this morning that a funeral had just been performed; for the trestles, painted with skulls and crossbones, yet stood in the centre of the building, with rows of tall tapers round about; while from the centre door emerged a procession of priests and little choristers, who slowly wended their way down the broad flight of steps leading to the street. We passed by the governor's town-house, which is fronted like the Venetian palaces (the only specimen of that kind of architecture which I have seen here), and went up a narrow street at the side of the French baths. These are in a fine old Moorish house, with an open court and bananas, where we sat to rest some time upon a red divan, lazily perusing our letters from Europe. From these we strolled up to the Rue de Salluste, called after the Roman governor of old times who commanded in Africa. The streets of Algiers are all named and numbered now, and a difficult task it must have been to accomplish this; for such a tortuous labyrinth no European could figure to himself: the oldest part of old Paris or Edinburgh is palatial in width and straightness compared to it. The houses are nearly windowless on the outside; little slits like loopholes alone giving sign of human habitation, except the arched door, suggestive of mysteries and *oubliettes*. The poet Campbell, in his letters from this country, written in 1834, says, they seemed built for no other purpose but to keep the heat out, and the women in. The rooms are necessarily dark, being only lighted by windows looking into the galleries surrounding the court; and a gentleman friend of ours, who opened a window in the outer wall of his dining-room, was obliged to glaze it with ground glass, and never enjoyed the luxury of putting his head out of it, because, from the steepness of the ground, it overlooks the terraces of several houses below it, and these terraces are sacred to the female members of each family, who would instantly be put to rout by such a terrific apparition. It is somewhat ludicrous to stand on one of these terraces in the upper part of the town, and thence look down fearlessly, if you wear a

bonnet and shawl) over the flat roofs, descending, step after step, to the sea, and see the trousered Moresques hanging out their clothes to dry, and clambering carefully over the partitions dividing them from neighbour-roofs, in order to pay visits to their gossips. Imagine, for the rest, these houses packed together, with only space between for steep winding footways, capable of containing three abreast, or an Arab and donkey with panniers; also frequently breaking into steps, when the ground becomes steep, and passing under arches and long tunnels, where the massive houses meet like solid rock overhead; for the upper stories almost invariably project more or less, and are supported by a number of small slanting beams, which produce a singularly picturesque effect. Algiers demands a Prout to do it justice, before its thousand bits of striking "subject" are ruthlessly destroyed by French improvements. It makes me quite sad to see demolition going on at intervals all over the town, merely for the running-up of tall, shabby, ill-built houses, which possess not an atom of beauty, and little safety either, considering the earthquakes which occasionally visit this country,—one of which, not many years back, destroyed the town of Blidah, some miles inland. A French gentleman, long resident in Algeria, described to us the awful approach of even slight tremblings of the earth; how the noise, heard afar off, slowly rumbled up nearer, causing the horses and asses to stand quivering in every limb, and *all the little birds to cease singing, and hide their heads beneath their wings for fear*. True Moorish houses have hardly any thing that can fall, unless the actual walls be overthrown; they have no chimneys, and little furniture save cushions. They are built for the warm weather, which prevails here during the greater number of months, and which last year was only interrupted by a very few days of rain; but they make no account of the possibility of such a wet season as the present, when the rain pours right through the centre of the house on to the marble pavement of the court below, with side splashes into the balconies. In this cool season,—about the temperature of our April,—the streets are tolerably free from disagreeable odours; but in the warm months they must be very unpleasant; and doubly tantalising to a painter, from the glorious light and shadow cast by the summer sun. It is in the hot months that earthquakes are felt,—from July to October; the ground sometimes sways for the space of half a minute, but no great damage has for a long time occurred here. At Cherchell, in 1845, the shocks lasted more than ten days, and all the town bivouacked in the streets, experiencing five or six tremblings each night. If any one be in the house when such occur, and have no time to rush into the street, the terrace on the top becomes the safest place, in order that, should any part of the house fall, he may fall with, instead of under, the ruins. But we hear of no serious earthquakes in this part of the colony.

When we sat down to sketch we were speedily surrounded by a crowd of people, particularly by Jewish women, who are the only easterners who walk unveiled. They are not handsome, the cast of features being too thick; indeed, the result of an experience of Moorish and Jewish female faces is, that the dark eyes and oriental grace do not rival in personal charm the finer cut faces and expressions of French and English women. These natives look not only uneducated, but unhealthy; their mode of life prevents their complexion from being bright and clear, and there is about them a general air of languor and heaviness which would nullify greater claims to beauty than they possess. One of the handsomest Arab men I have ever seen came and inspected our work; and when he saw that we were struck by his picturesque appearance, he threw aside his long white burnouse, and stood in a magnificent pose, exhibiting his rich-coloured robe underneath for the admiration of the European strangers. On the top of a neighbouring house emerged a Frenchman, who inspected our proceedings with great curiosity; then, going down into his interior, he sent up a lady, who also put her head over the wall, and

eyed us intently. The next spectator was a bearded Moor, carrying one of their classical water-jars on his shoulders; he walked slowly by us, and disappeared down the dark archway we were sketching. When we had enough of this sort of thing, we rose and wandered up the town, admiring the little open shops: the shoemaker's, where a small urchin sold us a delightful pair of red and yellow baby's shoes for sixpence; and the fruiterer's, full of pumpkins and Barbary figs; the native *cafés*, with crossed-legged gentry drinking little cups of coffee, the wine-skin slung up by the wall,—the first time we had seen that scriptural article; and the turner's workshop, where the lathes are worked by a simple contrivance like the bow of a fiddle. All these things, however, delighted us less than the scribe, busily inditing a letter for somebody unable to write their own; and an old Arab warming his skinny hands over a brazier, and muttering like one possessed by a demon. There are few cities in the world capable of affording so many interesting sights as those we witnessed during one morning's walk in Algiers.

AN APOSTROPHE WORTH EIGHT THOUSAND POUNDS.

Most opera-goers are acquainted with the trial-scene in the third act of the *Marriage of Figaro*. Marceline and Figaro are at law respecting a written promise, by which Figaro undertakes to pay Marceline a certain sum of money and to marry her. Figaro declares that, instead of *and*, or *is* written in the bond.

A still nicer point is said to be likely to occupy the French courts of law. Monsieur de M— died on the 27th of February last, leaving a will, entirely in his own handwriting, which he concludes thus: "And to testify my affection for my nephews Charles and Henri de M—, I bequeath to each *d'eux* (i.e. of them) [or *deux*, i.e. two] hundred thousand francs."

The paper was folded before the ink was dry, and the writing is blotted in many places. The legatees assert that the apostrophe is one of those blots; but the heir-at-law, a legitimate son of the defunct, maintains, on the contrary, that the apostrophe is intentional. This apostrophe is worth, to him, two hundred thousand francs, or eight thousand pounds sterling; and as the learned in the law cannot find in the context any clue to the real intention of the testator, it will be curious to watch the result of the contest.

E. S. D.

CORRESPONDENCE.

MADAM,—Amid all that is being said at the present time about improvement in the education or training of women, will you allow me space in your department to enter my protest against the idle-ladyism which is the prevailing tendency of society? You have already given your readers excellent articles upon some of woman's many duties; but there is one branch I would like to see put in yet a stronger light: it is the *training* of daughters to be really useful instead of merely ornamental members of society.

The man who works hard in a professional or mercantile career, and who trains his sons to a like course, trains his daughters, or allows them to be trained, to be "ladies," with nothing that they *must* do. But here, to avoid repetition, I refer your readers to your February Part (vol. i. p. 270) for an apt description of the life of "young ladies of well-to-do

families." The article is headed "Young Ladies' Work;" but that which the writer points out and recommends, and all similar works of charity, though good in themselves, are yet, in my opinion, not, as occupation, the first duty of young ladies,—are, indeed, mere palliatives of the reigning evil, which is the "inactive life that etiquette and the habits of society generally prescribe" for them.

It ought not to be considered demeaning to ladies to learn practically how to execute all the work required in the proper keeping of their homes; and I feel convinced these homes will never be rightly managed until ladies thoroughly understand what their servants ought to do, and are consequently able to teach those servants how best to execute all the branches of household work. At present they are at the mercy of their servants, who cannot help knowing the general ignorance of mistresses, and in too many cases take advantage of it.

We are constantly complaining of bad or inefficient servants, yet we hold the remedy in our own hands. Just let us understand our own business, and we may soon teach them theirs; for the true cause of so many indifferent servants is to be found in the ignorance prevalent among mistresses. To endeavour to prevent the longer continuance of this unwholesome state of matters is my object in now writing; for plain as it seems that ladies ought fully to comprehend housekeeping, which is their peculiar province, I have found some who had yet to be convinced that ignorance of it was any fault; their ideas being, in fact, very much the same as those of David Copperfield's child-wife Dora, who, if she did not know how to buy the leg of mutton, rested triumphant in the assertion that, "the butcher would know how to sell it."

After schooling is done with, most young ladies have their time at their own disposal; a faulty arrangement, as I think, for it surely is too much to expect from the greater number of them the persevering steadiness requisite for employing it well; and though I cordially approve of works of charity, as a great improvement upon utter vacuity of purpose, I think a woman should be fitted for the due fulfilment of the duties belonging to her more immediate sphere before even charity is made the principal or only real business of her life. Men need training for the business they are to follow out; and do women need none for that which is their peculiar business? Are their duties so easy as to be entered upon and performed satisfactorily at first trial, and by any one? or are women so clever as to need no teaching for their responsible position? The too frequent unhappy results of the present want of training are all I need allude to, to prove that neither of the above positions is tenable. Those who have a taste for housekeeping, or who are active, or energetic, or persevering enough to supply in the hour of need their previous deficiency of knowledge, will probably perform their part creditably; but with the large remainder, who either have no taste for housekeeping in all its various branches, or who want energy to overcome difficulties, or perseverance to carry them through repeated failures, nothing can compensate for the lack of early training; and what wonder is it that men have so often to complain of want of management and of consequent discomfort in their homes?

Human nature loves ease, and it is not difficult for girls to acquiesce in the little that is required of them. The details of housekeeping are no more interesting or attractive in themselves than the routine of a man's business; but just as he is happier in the execution of business, though it be often disagreeable or irksome, so would young ladies be happier in having something that they *must* do. I therefore advocate the daily performance of some of the details of housekeeping as very beneficial to body and mind, and also as being the best or only method of training girls to a thorough practical acquaintance with domestic economies. I might also go on to show how less of idle-ladyism among us could not fail to have an influence in improving society, by helping to check the prevailing love of show, the living

for appearances, which some of our leading journals have lately been lamenting and deprecating; but I reserve this for some future opportunity, when I may also enter more minutely upon what seems to me advisable changes in the up-bringing of girls.

McAutime, I am, &c.
A DAUGHTER.

DESIGN FOR A GARDEN FOUNTAIN.

DEAR SIR,—The design which I herewith submit to your consideration, for a garden-fountain, is given to prove how much may be done in carrying out such decorative objects at a trifling cost; and as economy may be a prominent consideration in the home adornments of the majority of your readers, I trust the following few remarks, founded on my own practical knowledge, will be acceptable.

A fountain in the garden may be well considered a luxury. It is an object of beauty, while its refreshing coolness and tinkling music serve as a lulling charm to while away an hour or so of a sultry evening; but many dread the expense of such an acquisition, calling to remembrance the marble basins and blowing tritons that adorn the statuaries' show-yards in the New Road, and which they are well aware are far beyond the means of the humble purse of a City clerk; but still there is the same yearning towards a fountain, and I was one of those who had this yearning.

I had a small, and I may say a pretty garden, stored with all the flowers my humble floricultural knowledge could bring together, and my still more humble accommodation-rare and propagate; but I wanted a fountain, and a small one. Now do not laugh, reader, at the means employed. Among the worn-out articles of domestic use which had been stored away in a back cellar, I found a large earthenware pan, such as is used in dairies; it was cracked, and therefore was condemned to be consigned, on the first opportunity, to the tender mercies of the dustman. It measured about four feet across, and I believe had served as a washing-bath for the juvenile members of my family. It was just the thing. I therefore drilled a hole through the centre, large enough for a small pipe. And now came the next consideration. What was I to do for a pedestal? I remembered that, within a short distance, on the banks of the canal, there was a wharf where they sold Roman cement, drain-pipes, and chimney-pots; and I had frequently observed that a great number of the two latter lay about cracked and broken. Away I went, determined on my fountain. I asked the man on the wharf if he had any broken chimney-pots; an inquiry he appeared to consider rather uncommon, but returned the laconic reply, that "there were too many by half." He pointed out a number.

DESIGN FOR A GARDEN FOUNTAIN

I selected one; it was only slightly damaged by a few cracks and a good-sized hole knocked in on one side. I asked the price. I could have it for a shilling. So I bought that, and some Roman cement as a make-up for the bargain.

I now set to work in earnest. I excavated a basin in the lower part of my garden, just in front of a favourite little bower; and as the soil was a close brick-clay, I had little difficulty in forming it. I allowed the surface to get well dry, poured over it a coat of concrete, and then gave that a coat of Roman cement. And now came the artistic part of the business. I obtained some large flint-stones, old bricks, and clinkers, and formed a rustic base; and while that was getting settled and dry, I proceeded with the other parts. First for the pedestal. I took my chimney-pot, and covered its surface with Roman cement; the very hole in the side became ornamental, for I perforated the opposite side also; then, with the cement, formed rough

and rugged stalactite forms, projecting and growing out of the sides, some pendent, others shooting upwards, and here and there, stuck in as by accident, a few broken bits of spar and shells, and small bits of coral. This being done, it was set aside to dry.

Next, to form my grand basin; and here my old pet earthenware pan came beautifully to hand. To facilitate my work, I placed this inverted on a board, and covered it with cement, and then built up all sorts of stalactite forms; taking care to make them as uneven and unlike as possible, for therein consists the art of imitating nature. This was allowed to remain until perfectly dry and hard. My pedestal was next placed on its rocky bed, first having taken the precaution to lay a piece of gutta-percha tubing to pass up through the centre. My grand basin being dry, was placed on the top; and to form the upper basins, I used inverted small flower-pots for the pedestals, cemented together; for the second basin, a moderate-sized propagating-pan, and for the top a large-sized flower-pot pan, perforated so as to allow of the jet passing through. All these were covered with cement, so as entirely to disguise their original forms, and in the mass it formed a pretty and agreeable object; and the effect I afterwards greatly improved by washing the whole surface with thin cement, and sprinkling upon it a quantity of coarsely-powdered glass, which, even when the fountain was not playing, produced a delightful sparkling effect. The water was supplied from the cistern of the house, which was sufficiently elevated to admit of my fountain playing in a very thin jet to the height of five feet. My lower basin was stocked with gold fish and water-lilies; and if I say that, being the work of my own hands, it did not cost me 2*l.*, I shall not exaggerate.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XVII.

PAINTED BY T. M. JOY.

NEGLECTED FLOWERS.

NEGLECTED FLOWERS.

By T. M. JOY.

Along the common ways of life, and under the hedges by the side-paths through the world, grow numberless humble yet beautifully tender flowers, blooming sweetly in the depth of their own humility and shyness, shrinking from the traveller's foot-track, and from the glowing heat of all-pervading day. They are protected

"Against the sword of winter, keen and cold,"

by the rough banks and briery mounds by which they grow clustering together, sheltered by the ragged and wandering brier, guarded by the sturdy thorn, and concealed by the primitive and overhanging privet, the woodbine, the wild convolvulus, the rose-à-rubie, and they that are the modestest of darlings, convolvularia, and all those blooms whose faint odours load dawn of day with sweetness, with soft breathings, and faint sighs of scent that steal out of dim, unsuspected, shady nooks, whereabouts grow the moss, rank grass, and sturdy weed.

How few of us know them, even their names, much less love and cherish them! Do we not rather

"wonder at the lilies white,
And praise the deep vermilion of the rose,"

seeing all things that stand up before us to be seen, seldom seeking for ourselves about the down-trodden ways and lonely woods for those beauties that hide in calm unconsciousness of beauty and desert?

Amongst mankind, also, there are the same "neglected flowers," placid fair creations, who, with innocent pride, withdraw from the rude gaze of others, laden with goodness, charity, and humility, as the flowers with scent;—pale, pure, and modest as the shyest blossom, and clinging about the feet of the rougher growths that dominate the world, who, if they protect, also darken, neglect, and hide them.

The artist seeks to convey his feeling of these things in the picture an engraving of which is before the reader. If he has done this successfully can be decided by every one for himself, as the subject appeals to the simple and natural feelings that all men share alike.

L. L.

BÉRANGER.*

By ROBERT B. BROUGH.

THE amplest materials for the life of Béranger are within the reach of the most indolent and the most needy. They are to be found, arranged in chronological order, in a small pocket-volume, the price of which is the modest sum of three francs and a half, and of which many thousand copies are annually sold. The contents of this volume are exactly three hundred and twenty songs, with a few pages of notes and preface. Its title is *Œuvres Complètes du P.-J. de Béranger*.

"*Mes chansons*," wrote Béranger, when he had rested from his task, and could view the unique labour of his life in its proportions as a whole, "*c'est moi*." It was the simple truth. The annals of literature do not furnish a second instance of a man so inseparable from his writings—of writings so exhaustively exponent of a character and a career. Never before was so much of a human personality poured into song. It was Béranger's mission to sing, as it was the prophet's of old to speak. He understood and accepted his mission at once:

"J'étais sur cette boue;
Laid, chétif, et souffrant;
Étouffé dans la foule,
Faute d'être assez grand;
Une plainte touchante
De ma bouche sortait;
Le bon Dieu me dit: Chante,
Chante, pauvre petit!"

* See portrait of Béranger, p. 313.

And the little man set cheerily about his tuneful task, pursuing it with unswerving energy and integrity, living to see it gloriously completed, and wisely desisting when it was done.

The three hundred and twenty songs of Béranger are parts of a whole, as complete and symmetrical as an epic. They are the picture of his life and times. He himself has described them as "lyrical memoirs" (*mémoires chantants*). The definition is over-modest. They are a poetical history of France, extending over a space of more than fifty years, centreing in the personality of the truest-hearted Frenchman that ever knew and loved his country.

It is through Béranger's songs that we purpose to give such a review of his life as the brief space allotted to us will admit of, borrowing little assistance from dates and extraneous facts.

Pierre-Jean de Béranger was born in the physical heart of that Paris whereof the moral atmosphere pervaded his every thought and action through life. We are indebted to dry biographers for the knowledge that the place of his birth was in the Rue Montorgueil, No. 50. He himself has apprised us of all the essential facts connected with the event:

"Dans ce Paris, plein d'or et de misère,
En l'an de Christ mil sept cent quatre-vingt,
Chez un tailleur, mon pauvre et vieux grand-père."

Nothing could be more explicit. He was born in 1780, in Paris, at the house of his grandfather, who was old, poor, and a tailor. The obscurity of his family is further explained in *Le Vilain*, in which the poet declares himself a fellow of the common stamp, with a supreme contempt for the aristocratic particle "de," which accident or ancestral affection had prefixed to his name. We have already seen that he was "*laid, chétif, et souffrant*"—ugly, puny, and suffering. Would the reader know where the future bard was nursed, and whence he derived his first musical inspiration? Let him read *Ma Nourrice, chanson historique*. There will he learn how, in a remote month of August (his birthday, as we learn from more prosaic chroniclers, was the 17th), our poet, then a newly-born infant, departed by the Auxerre coach, in the charge of a handsome young wet-nurse, who, with six francs and certain linen essentials in her pocket, conveyed him to the tuneful province of Burgundy,—

"Pour la chanson climat propice,"—

where his young nurse's old drunken husband was accustomed to sit on the town-quay, glass in hand, and

"Chanter les gaités de Piron;"

a consistent beginning certainly for the life of an Anacreontic poet.

We cannot follow little Béranger through all the scenes of his infancy, of which reminiscences are profusely scattered through his numerous lyrics.

He returned to Paris, to be spoiled by the worthy old tailor, his grandfather (his own father, a restless unsuccessful speculator, troubling his head very little as to his son's welfare), and pick up such education as the streets and gutters of Paris might afford. Béranger's early days were, in fact, those of a thorough-paced *gamin*. It was a propitious time for the boys of Paris. The revolutionary troubles were commencing, and excitement abounded. On the 14th of July 1789, Béranger, in his tenth year, occupied an undistinguished post in the rear-guard of the ragged regiment of patriots that burst the gates of the Bastille. There is a symmetry in the external events, as well as in the motives and personal acts of his life, that is really remarkable. The 14th of July was a day of unsurpassed loveliness. Exactly forty years afterwards, the poet, pining in a cell of La Force, whither he had been consigned by the government of Charles X. for his political opinions, was roused from gloom and despair (the season had been cheerless, and poets—especially if they happen also to be Frenchmen, a coincidence which

* "*Le Tailleur et la Fée*," written in 1822.

rarely happens—are marvellously susceptible to atmospheric influences) by a lovely summer-sun bursting through his prison-bars. It reminded him of that glorious day, forty years back, when he had first, albeit unreasoningly, raised his voice to encourage a people in the conquest of their liberty. He had, but now, despaired of France and freedom. But the sun shone as it had shone forty years ago. (What poet can dissociate sunshine from the idea of hope?) It was the 14th of July! There were still chains to break, and dungeons to raze. He had a voice now, with power to direct the actions of the mightiest crowd. Béranger wrote *Le Quatorze Juillet*; a startling description of the great event of his boyhood, so indelibly impressed on his memory, in which the rule of the Bourbons was symbolised by the hated Bastille, which he had seen so easily destroyed by a resolute people. The following July had barely elapsed ere his majesty Charles X., in the palace of Holyrood, had ample leisure to meditate on the policy of locking up popular poets; especially when, as little boys, they may happen to have been present at the destruction of state prisons.

This is anticipating. The worthy old tailor, who loved his grandson too well to inflict upon him the nuisances of reading, writing, and arithmetic, was naturally anxious to keep him out of the way of cannon-balls. Little Béranger was sent for safety to an aunt, who kept an inn at Péronne, in Picardy. This relation was a kind-hearted woman, but a devotee to the backbone. In her opinion, the first and sole duty of Man—Man happening to be under the age of ten years—was to say catechisms. Béranger didn't like catechisms. On the whole, he preferred barricades. It is to be feared that the old tailor, like all tailors, old and young,—including (if we may be permitted the Ilibernicism) shoemakers,—was an arrant Radical and Voltairian, and, most likely, imbued the youth's mind with disrespectful opinions towards existing authorities. It is certain that (catechisms apart) the young Béranger could not be brought to a right way of thinking on the subject of holy water. Péronne was attacked by a terrible thunderstorm, from the effects of which the old *auberge* trembled to its very foundations. Pierre-Jean permitted himself to indulge in some heterodox observations on the efficacy of the repeated signs of the cross and sprinklings of holy water employed by his aunt in order to conjure away the effects of the thunder.

Suddenly the window was burst open with a terrible crash. The electric fluid struck the child, who was picked up, senseless, from the floor. He was believed to be dead; but in the course of an hour or so, reviving from his swoon, he evinced his incorrigible nature by the following question, addressed to his kind aunt, whom he saw kneeling and praying by his bedside:

"Well, and after that, pray what is the good of your holy water?"

The aunt was scandalised. Suspicions—only too well founded, as the result proved—immediately occurred to her. It was discovered that the young reprobate had not merely refused to learn his catechism, but that he had concealed in his bedroom several volumes of Voltaire (it would seem that, by some mysterious process, he had acquired the art of reading), saved from the library of his late uncle, and which the good dame, having allowed her avarice to get the better of her piety, had not found in her heart to destroy or dispose of. The thunderbolt was accounted for. It was doubtless a judgment. The terrible penance the old lady must have incurred makes us shudder, even at this distance of years.

Young Béranger assisted his relative in her innkeeping-duties (potboys, be proud!) until such time as he was old enough to be entered as a pupil in the Patriotic Institute of Péronne, founded by a red-hot republican member of the Legislative Assembly—Ballac de Bellanglise. Here the study of Latin and Greek was prohibited. The poor children, by the constitution of the academy, were compelled to burlesque the proceedings of the political clubs of the time. They were expected to make harangues, to indite

letters to Robespierre, Tallien, &c. Béranger preferred these exercises to the catechism, and distinguished himself greatly as a political debater and essayist—of four feet high.

Pierre-Jean loved his school. The histrionic displays, which formed the principal duties of the scholars, were congenial to his artistic nature. He liked playing at a talking-man's importance; but, alas! he was, too soon, called upon to perform a working-man's duties.

His aunt was poor and religious. For fear of suspicion of disaffection towards the prevailing régime, she had forborne to withdraw her nephew from the school, whose doctrines she considered perdition. She at length made her poverty an excuse for doing so. She declared her inability to support the boy at school; and removed him, on the plea that he must be put in the way of earning a livelihood. Béranger was rescued from the perilous clutches of M. de Bellanglise, and apprenticed to a printer in Péronne, named Laisney. Who and what M. Laisney was, the reader may learn by consulting the song entitled *Bonsoir*, addressed to that gentleman by the poet, thirty years after the date of his apprenticeship. Béranger never left a true friend unpaid by the honours of verse. M. Laisney was one of his best friends; for he encouraged him to neglect printing himself, and become the cause of printing in other men. What the world owes to M. Laisney may be estimated from the following note, affixed by Béranger to the song alluded to, which is in itself a compliment of the highest description:

"It was in his printing-office that I was placed as an apprentice. Not having been able to teach me how to spell, he resolved to encourage me in a taste for poetry, gave me lessons in versification, and corrected my first crude essays."

All honour to Monsieur Laisney!

Béranger's republican bias had been fixed by the eventful scenes amid which his early youth had been passed; by his scholastic training in the Institute of Péronne; and, more than all, by an inherent love of freedom, and a poet's faith in the perfectibility of the human race, which led him frequently to dreams of Utopianism. Accident, with the assistance of kind Monsieur Laisney, put him in the way of expressing himself to the world. A volume of André Chenier was intrusted to his "prentice hand" for typographical composition. Our future poet was at once struck with the melancholy sweetness of his unfortunate predecessor's verses. He resolved to imitate some of them, and set to work on the spot, succeeding very much to his own surprise and satisfaction. In the discovery that he was a poet, however, he forgot that he had promised to be a printer. He neglected the material composition for the spiritual. His employer caught him *in flagrante delicto*, but had the wisdom to consider the verses written more than compensatory for those that ought to have been printed. The youth, who had

"Penned a stanza when he should—compose,"

was encouraged to continue in the neglect of his duties, and to make a great man of himself as soon as possible.

Béranger, having terminated his pleasant apprenticeship, returned to Paris. He found his father in comparative opulence, due (as it afterwards transpired) to royalist intrigues. The improved circumstances of the family afforded to the young poet the rare boon of leisure. He threw himself into literature with all the ardour of a neophyte. It is needless to say, that he did not at once discover the real bent of his vocation. What great writer ever did? He commenced with the most ambitious projects. As he himself informs us,*

"The most ambitious poetical dreams cradled my infancy; there is scarcely an elevated branch of the art that I have not secretly attempted. To fulfil an immense career at twenty years of age, without the advantages of study—even that of Latin—I attempted to penetrate the genius of our language, and the secrets of style."

* Preface to Collection of 1833.

There was certainly no lack of ambition in the range or class of subjects attempted by Béranger. He wrote a comedy called *Les Hermaphrodites*, ridiculing the effminacy of the age. This was merely by way of relaxation from the severer labours of an epic poem on the subject of *Olovis*. The comedy was never acted, and the epic, in all probability, never finished. Not a trace has been preserved of either. No better fate has attended the rest of his early efforts; amongst which may be mentioned an idyll in four cantos, *La Courtisane*; another of unknown length, *Le Pèlerinage*; three odes, having for subjects the Restoration of Religion, the Flood, and the Last Judgment; and a small collection of minor poems, his earliest effort, published at Péronne under the name of *La Guirlande de Roses*. All these the poet destroyed as mercilessly as a painter effaces idle charcoal sketches from the canvas of his masterpiece, having no real connection with the great design.

Accident, which sent Shakspeare to hold horses in London, and drove Molière into a stroller's booth, decided Béranger's career for him. His father was detected in a royalist plot, and imprisoned. The apparent prosperity enjoyed by the family disappeared, to be succeeded by absolute want. Béranger found his epics, idylls, and comedies of little use to him. A movement of emigration of French families to Egypt had been excited by the conquests of Napoleon. It was the poet's intention to join this movement, in the hope of obtaining some civil employment from the colonial government. He was dissuaded from this project by a friend whom he consulted, and who assured him that the Egyptian colony was not likely to be a thing of long duration.

Béranger remained in Paris; and again we return to his songs for the history of his life. The *Grenier*, a reminiscence written after a lapse of many years, tells us how, at the age of twenty, he led a life of thoughtless penury in a garret six stories high, rich alone in health, hope, and the society of boon companions, as poor, as reckless, and as jovial as himself. The *Gaudriole*, *Mon vieil Habit*, *Les Gueux*, *Roger Bontemps*, and others, are pictures of this stage of his career. His satiric and political veins he had scarcely yet discovered. His patriotism, at present, went no farther than an unqualified and enthusiastic faith in the First Consul as the embodied principle of the victorious French republic. There was as little sympathy between the poet and his father in politics as in other matters.

But even garrets and sour wine must be paid for. The young Bohemian found himself face to face with starvation. In a desperate fit, he made a collection of every scrap of writing he had ever composed, and sent it to Lucien Bonaparte, the First Consul's brother, who had been represented to him as a patron of literature. The consignment was accompanied by a boyish letter, which the poet remembered in after-years to have been "worthy of a young head violently republican," and which "bore the imprint of pride wounded by the necessity of having recourse to a patron." Lucien sent for the writer to his hotel, "informed himself of my position, which he at once ameliorated; treated me as a poet, and overwhelmed me with encouragements and good counsels."*

Exile soon deprived the young writer of his considerate protector. Lucien Bonaparte left France for his long residence in Italy. Béranger believed his hopes at an end, when he was unexpectedly relieved by a letter from the prince, dated from Rome, renewing former expressions of good-will and encouragement, and authorising the poet to receive and apply to his own use the annual pension allowed by the Institute of France to Lucien Bonaparte as one of its members. Béranger continued to receive this annuity (a thousand francs, or forty pounds a-year) up to 1812.

For thirty years, Béranger had no opportunity of publicly expressing his gratitude to his benefactor. He attempted to do so at once, by the enthusiastic dedication of

* Dedication to Lucien Bonaparte, 1803.

a volume of *pastoral poems*. The imperial censorship would not permit such public honour to one under the ban of its master's displeasure, and prohibited the dedication. Béranger, in the first heat of his indignation, thrust the entire manuscript into the fire; so that the Pastorals of Béranger are amongst the lost books of the world. The Bourbon régime would admit of no printed honours to one bearing the name of Bonaparte; and it was not till the Revolution of 1830 gave France (for a time) a free press, that our grateful scribe was permitted to give expression to his feelings, which he did in a handsome dedication, from which we have already quoted.

The academician's pension was far from being adequate to supply the wants of a young author of careless habits and ardent passions. He eked it out by song-writing and general literary drudgery; and was further assisted by a small employment in the University of Paris, obtained for him by the friendship of M. Arnault, the author of *Marius à Minturnes*. Béranger repaid this kindness in his usual coin. When Arnault was exiled by the Bourbon government, the grateful poet addressed to him his exquisite lines of *Les Oiseaux*.

At the age of thirty-three, Béranger's imperial enthusiasm began to cool a little; and his keen, and now mature, intellect began to perceive, and long to satirise, the weaknesses and despotic tendencies of Bonaparte's government. But under such a sway, satire must be covertly and insidiously attempted. The *Roi d'Yvetot* appeared; and, for the first time, the hero of Lodi and Marengo found himself exposed to the most deadly enemy a Frenchman or a French government can encounter—ridicule. The satire was, however, so delicately and playfully conveyed, that even its object was fain to affect approval of it. Later in his career, the great man was destined to receive a severer lesson from the same quarter. At the most jealous, because the most precarious, period of Bonaparte's power, our poet had the hardihood to point out, under the form of an expostulation with a capricious courtesan (*Traité de Politique pour l'usage de Lisette*), the pernicious tendencies of the imperial absolutism, and the certain ruin it must result in.

These, however, were mere friendly admonitions—at the utmost, no more than the chidings of a parent. Béranger loved the first Napoleon, and could but deplore the fall of a régime which his sagacity told him was inevitable. It was not till the return of the Bourbons, when he conceived the whole work of the revolution reversed, and that all required to be commenced again, that Béranger began to feel and exercise his powers as a satirist. From the first occupation of Paris by the Allies, to the overthrow of Charles X., in 1830, the poet was a constant thorn in the side of the restored government. The revival of old court mummeries and antiquated feudal pretensions were more the objects of his scorn and ridicule than even that of an hereditary absolutism. *Paillasse*, *La Cocarde Blanche*, *La Marquise de Pré-tentaille*, *L'Opinion de ces Demoiselles*, *Le Marquis de Carabas*, *La Censure*, are among the earliest of his barbed arrows that rankled beneath the laced waistcoats of the triumphant lackeys. Unfortunately these were not grounds for legal prosecution,—the Bourbons, in the earlier stage of their revived power, keeping up a feint of constitutionalism. It was necessary—as on a former occasion of greater magnitude—to call in a foreign ally for the suppression of the common enemy. The priests came to the assistance of the Faubourg St. Germain.

Béranger, then at the height of his popularity,—his songs, whether published secretly or openly, as necessity required, enjoying an unheard-of circulation,*—sang for the first time, at a public dinner, *Le Dieu de Bonnes Gens*. This proceeding was denounced by the editor of a religious paper, and the poet-vocalist cited to appear before the court of assizes, on a charge of having outraged public morals, common de-

* They had reached a second series, published in 1821. On the day of their publication, he prudently resigned his post at the University to avoid inevitable consequences.

cency, and religion, and endangered the person of the king. Béranger was sentenced to three months' imprisonment. The police made a descent upon his publisher's premises, and seized four thousand copies of the second series of his songs. The proceeding was somewhat too tardy to be efficacious. Upwards of four thousand copies had been already sold publicly, not to mention the countless editions that had been privately circulated. The songs of Béranger were already imprinted on every heart, and sung by every voice in France.

Béranger made his imprisonment in St. Pelagie (1821) the occasion, and subject of some dozen of his most trenchant satires on the Bourbon régime. The two most striking sections of this chapter in his life are, perhaps, *La Liberté* and *Ma Guérison*; the latter a sarcastic account of his gradual cure from the disease of democracy by repeated doses of certain wine, which leave him thoroughly convinced of the advantages of a despotic government.

He left prison at the end of April, a few days before the arrival of the news of Napoleon's death at St. Helena. This occasion inspired him with the idea of one of his sublimest efforts, *Le Cinq Mai*; a poem that revived, in the people's memories, all the glories, real and imaginary, of the late empire, and rendered the dull unproductive cruelties of the restored government more unpopular than ever.

A word as to Béranger's Bonapartism. He revered the personal character of the emperor solely as a warrior; he never approved the principles of his government. When the man had fallen, leaving, as it would seem, no system or dynasty possible of revival behind him, the poet forgot the despot in the hero. Moreover, in the then state of public feeling in France, there was no principle to oppose to that of the hereditary monarchy but the one which had been superseded by its restoration. Had Béranger foreseen that his florid exaggeration of a great soldier's merits would one day be taken advantage of to impose a fresh absolutism on his nation, it is more than possible that *Le Cinq Mai* and *Les Souvenirs d'un Peuple* would never have been written.

Béranger's third series appeared in 1825. In this, all dangerous specimens were prudently suppressed by the publisher; and it met with no opposition from the government. Eight years afterwards, a fourth series appeared, containing certain ballads, which the faithful Jesuits—constant in their support of the throne and nobility—took into their especial consideration. The author of *Les Révérends Pères*, *Les Missionnaires*, *Le Bon Dieu*, and *Les Chantres de Paroisse*, was again cited to appear before the tribunals, and was this time sentenced to nine months' imprisonment in La Force, and a fine of 10,000 francs. The fine was immediately paid by a public subscription, opened in the bank of Jacques Lafitte the millionaire, the constant friend of Béranger; of whom the latter has written, that "he was the first man to popularise riches in France."

With the revolution of 1830 Béranger's public career may be said to have closed. The songster had exhausted his *répertoire*. The dream of his life, "the happiness of the human race," he had not lived to see realised, even to the partial extent his sagacity had led him to consider possible. He had laboured for a republic; and the *intriguants* of 1830 showed him, in its place, what he has characterised as "a dirty old throne whitewashed." The endurance of this throne he knew to be impossible; but it was not within probability that he should live to see its overthrow. At any rate, he had aimed his last shaft. The battle was not won; but the old soldier had fought his fair share of campaigns, and was entitled to honourable retreat. He left the issue of the fight to younger men, whose ranks he was unwilling to encumber with his useless presence. In his own words, he refused to wait till stronger combatants should cry to him, "Get behind, old man, and let us pass."

For the last twenty-five years Béranger led a life of modest obscurity, only differing from that of the humblest retired tradesman in the fact, that he could not show himself in street or assembly without receiving such ovations from

the public as kings and emperors might envy. He may, in fact, be defined as the most popular author that ever lived to witness the realisation of his own fame.

To many Englishmen the vast popularity of Béranger may be unintelligible, the literature of our country affording no parallel to his case. Burns is the nearest approach to it; but he wrote for an age and people to whom even the merit of being a Scotchman was not sufficient atonement for the fault of being a reprobate. Scotchmen discreetly deferred their approval of Burns's writings till the scandals of his life were over. Burns, to have claimed the sympathies of his countrymen, should have been an austere puritan. It is true, that in that case he might have found it rather difficult to be a lively warm-hearted poet also. What we mean is, that he was at variance with the spirit of the age and nation he belonged to. With Béranger the case is diametrically opposite. He was essentially the man of his age; he felt and expressed the dearest aspirations of the bulk of his countrymen in such a way as to charm and flatter them. He showed to every Frenchman an ideal portrait of himself. He was not, like Burns, the *mauvais sujet* of a respectable community. He was the mouthpiece of a great people against a handful of oppressive families and institutions. He was their poet, jester, philosopher, political guide, and even, to a great extent, their priest and moralist; for it should be known that what many among us are apt to consider his looseness and impiety, is, in the eyes of the majority of Frenchmen, an expression of an exalted code of ethics and religion. English people, in the majority of cases, have no idea of what a hideous monstrosity the orthodox French "respectability" is: a system that checks the play of the human affections; that makes spontaneous engagement of young hearts a crime; that only understands, by marriage, the sale of a young girl's body to a well-to-do purchaser; and, by religious education, the unconditional surrender of a young soul to the mercies of a father-confessor. The strong common sense of a nation rebels against these enormities, and hails as an apostle of righteousness the man who, by precept and practice, teaches that it is better to be faithful through life to a beloved mistress, than to be a selfish profligate in youth in order to become a legalised slave-buyer in middle age; that it is better to walk in the fields—ay, or to tipple in the cabarets—than to abet the obstructors of light, the enslavers of conscience, the throne-props of despots, in their blasphemies against God's goodness in gilded cathedrals.

There is one point in Béranger's favour that cannot be too strongly dwelt upon, namely, his consistency. His numerous political enemies, who have survived him, would be only too glad of a single instance of his expressed opinions of one period differing with those of another; or of the practice of his life, at any time, being at variance with his written precepts. Nothing of the kind is to be met with in his whole history. The hatred of oppression and servility; the incorruptibility, cheerfulness, and contempt for riches; the generosity, the belief in a benign Providence, advocated in his writings, were exemplified through his whole life. He has been charged with arrogance and over-estimation of the importance of his calling, for having refused many opportunities to elevate himself in the social scale, insisting on his right to remain a song-writer and hold it a position of sufficient dignity. Surely in these days, when the first thought of every cobbler appears to be to detach himself from his last, such a course as that pursued by Béranger should be held up to admiration. It is certain that many so-called honours and vast wealth might have been his, had he chosen to accept them. But, with the one exception of Lucien Bonaparte's friendly start in life (which was as honourable to the acceptor as to the giver), he refused all such offers. In 1829, when there was a rumour of the insolvency of his publishers, and his utter ruin appeared certain, he declined an advance of 18,000 francs from his friend Lafitte. He declined honourable office under the Orleans government, towards the establishment

of which he had rendered such powerful assistance. He declined a competence for life, offered to him by General Sebastiani, from that gentleman's private means, on terms of the most delicate secrecy. He was aware of the power of gratitude over his nature, and was fearful of contracting obligations even to the men whom he esteemed the most, lest his independence of thought should suffer.* He declined to be nominated a member of the French Academy. When elected, against his will, to a seat in the Constituent Assembly, in 1848, he merely presented himself once in the chamber, to recognise the honour the people had done him, and never returned to it. He felt that that was not his sphere of action. His last act of dignity was the delicate and courteous refusal, some months ago, of pecuniary assistance from the Empress Eugénie. His wants, both in fame and money, were adequately supplied; and he had the rare gift of contentment. The modest sufficiency he enjoyed to his death he owed to a friend, it is true; but it was to the uncommon honesty, and not to the generosity, of that friend. The publisher, Ferrotin (in whose arms our poet breathed his last), having purchased the copyright of all Béranger's works for an annuity of 800 francs, and finding that their sale returned to him an amount vastly exceeding his expectation, had the probity to increase the yearly sum to a competency for the poet's wants for life. In a hard-bargaining age like this, such an act (albeit in itself one of bare justice) assumes the proportions of magnanimity.

In person Béranger was below the middle height, and inclined to corpulence. His countenance was like his songs, concealing nothing of the owner's character. The cast of his features was rather Teutonic than Gaulish. He was gifted, more especially in the latter part of his life, with excellent health and indomitable spirits. He enjoyed long walks, hearty eating, and still heartier laughing, till within a week or two of his death.

The particulars of that event are too fresh in the memory of the public to need recapitulation here.

The chief recommendations of Béranger's poetry are, wit, faultless elegance of rhythm and melody, and marvellous condensation of subject. It is difficult to read two of his songs for the first time in immediate succession. After one specimen, you are fain to lay down the book and reflect upon the vast field of suggestion that has been opened to you in a few easy tripping lines. This is accounted for greatly by the fact, that Béranger bestowed more pains on a song than many writers can spare to a tragedy or novel. He polished, retouched, and often entirely rewrote his compositions many times over. When a song was felt by him to be susceptible of no more improvement, and at the same time not equal to his standard of excellence, it was ruthlessly and invariably sacrificed. It was by these means that Béranger, as a writer of songs, attained to what no writer can achieve, except by a similar course of proceeding,—perfection in his degree.

The National Magazine.

[The Editors of the NATIONAL MAGAZINE cannot return unavailable Papers, except in cases where it may seem desirable to communicate with the writers.]

THE Honourable NEAL Dow of Portland, Maine, United States, has recently been addressing large concourses of people, in Manchester and elsewhere, on the subject of Temperance and the Maine Liquor Law, which he would fain see adopted in this country. It would be unjust not to recognise the earnestness of this gentleman; and for the object of that reform he has so much at heart, we can but

feel cordial sympathy and hearty good-will. But the question as to the means of compassing that object admits of discussion; and in our view, though the Maine law may appear an easy method of putting a stop to drunkenness, it is neither a desirable nor an effectual one.

There is, we hold, a fundamental error in the principle on which this law is based. Moral progress, to be worth any thing, must have its rise and derive its strength from *within*. The morality which is the simple result of the action of external circumstances we shall all admit to be comparatively valueless as regards the world, absolutely valueless as regards the human being himself. We do not lavish much admiration upon a rich man who refrains from picking pockets, nor upon a beggar because he is not avaricious or extravagant; neither should we laud those savages of the — Islands for their temperance before the introduction to their knowledge of that "fire-water" which their Christian invaders brought with them. Temptation must exist before virtue can have its being. Temperance is a mere word, null and void of meaning in cases where indulgence is materially and physically impossible; and abstinence is neither the work of the will nor the result of moral conviction. A free man who does not transgress the law because he *will* not, is obedient; a fettered man who does not disobey because he *cannot*, is a slave. We could place no dependence on the obedience born of slavery; neither could we be satisfied with the temperance compelled by legislation.

It would assuredly be no service to the cause of Christian progress, were it possible to devise with regard to every possible sin such preventive measures as those with which this law seeks to surround drunkenness. With respect to immorality, prevention is *not* better than cure. Human reason, human volition, are divinely bestowed gifts, intended to be duly exercised in the acceptance or rejection of both good and evil. That fruit in Eden which was forbidden to man was still left within his reach. No external obstacle was placed in the way of disobedience; moral and spiritual restraints were alone deemed worthy of a morally and spiritually endowed being by his Creator. Should men's laws be based upon another principle than this? Can we expect to find for ourselves a better or a juster system than is laid down for us in the history of all God's dealings with his creatures?

Our objection, then, in the first place, to the Maine Liquor Law is, that it is not advisable; our second takes lower ground, and simply pleads that it is impracticable.

Not impracticable, of course, to lay down the law, but to insure its effective working. All arbitrary measures carry with them this penalty,—the coerced will, either by rebellion or cunning, seek to free themselves from their bondage. Thus the sin grows complicated, and hypocrisy and falsehood lend themselves to aid the cupidity of the vendor, the appetite of the purchaser. On this point Mr. NEAL Dow offers a curious piece of argument. He remarked, "As to the results of the Maine law, it was said it was a failure. But who said this? The bitterest enemies of temperance. The liquor-sellers in Boston said they sold more under the existence of the Maine law than before; but if they did so, why did they oppose it?" But if they do so, what is the use of the law? we may fairly ask; nor shall we be content with a retort that slips aside from the assertion, instead of disproving it. If Mr. NEAL Dow has no better reply than this to make to the exultant statement of "the liquor-sellers in Boston," his case is weak indeed.

And let us confess that we should view with little regret the failure of a law which seeks to abrogate the functions of a man's conscience, and while it aims to hinder him from vice, equally prevents him from attaining to virtue.

True, the confirmed drunkard is so far an insane and unreasonable being, that for him the restraints of the lunatic can hardly be deemed inappropriate; but because some men are mad, do we take from every man the right of governing his own actions? Thank Heaven, drunkenness in England is no longer the obtrusive characteristic that it may have

* "C'est parce que je sais quel pouvoir la reconnaissance exerce sur moi, que j'ai craint de contracter de semblables obligations, même envers les hommes que j'estime le plus." *Preface, 1833.*

been fifty years ago. Education, refinement, all that tends to exalt and cultivate our humanity, are its sworn foes, more potent than any stringent enactment that a state could enforce. As these progress, so will men themselves rise to a nobler standard of conduct that shall act as their best safeguard against whatever is degrading and brutalising.

It is not a law devised by human brains that will raise the growelling or reform the debased. Whoso seeks to influence the soul, must speak to the soul, and work upon the soul. As manhood advances, as the germs of truth and beauty—which we believe lie latent in every human spirit—are cultivated into fruitfulness, so must these sad and monstrous vices of which drunkenness is the hideous parent become less and less prevalent. Religion cries out against it; morality shrinks from its approach; manly feeling revolts from it. Let us seek to make our people religious, moral, manly, and we shall need no Maino Liquor Law.

THE ART-TREASURES EXHIBITION.

BY JOHN CRITCHLEY PRINCE.

BEHOLD this treasury of glorious things,
This shrine of genius, this enchanting place,
Where every Muse some precious tribute brings
Of blended beauty, dignity, and grace!
Enter with calm and reverential heart,
With earnest purpose and unclouded mind,
So that thy soul, amid transcendent art,
May feel at once refreshed, exalted, and refined.

Hark to that tremulous harmony that swells
Into a gentle surge of solemn sound,
That with a magic influence dispels
The silence, and pervades the air around!
It makes the breast with pure emotions sigh,
It stirs the hidden fountains of our tears,
And seems to lift the longing spirit high,
Even to the loftier choir of the according spheres.

While those sweet sounds yet linger in the ear,
Let's thread this wondrous wilderness of charms,
And wisely ponder o'er each object here
That elevates and fascinates and warms;
Lovely creations, which in happiest hour
The painter's hand has o'er the canvas thrown,
And graceful marvels that the sculptor's power
Has fashioned in his mind, and conjured from the stone.

Those mighty masters of the earlier art,
Those matchless wizards of the elder day,
From earthly things and earthly thoughts apart,
What grandeur did their faculties display!
Lofty conceptions did their souls pervade,
And took immortal shapes at their command,
While reverential feeling moved and swayed,
And silently inspired the cunning of their hand.

And have not we, in this our later time,
Our own art-treasures, famous, and not few,—
The bold, the graceful, even the sublime,
The sweetly tender, and the grandly true?
Amid the walks of intermingled life
We make our study, find our pictures there,
And send imagination, richly rife
With germs of glorious thought, into a holier air.

O Genius, whose mysterious powers ally
The restless spirit with serenest things,
That purify the heart, and lift on high
Our aspirations, as on heavenward wings,

A worthy purpose doth pertain to thee,
A noble and a hopeful task is thine,
To set our natures from low passions free,
And give unto our souls glimpses of realms divine.

Music, with stirring or consoling tones;
Painting, with all thy harmony of hues;
Sculpture, that sitteth upon marble thrones
And thou, not least of these, poetic Muse,—
If ye from earth at once were swept away,
With all the memory of your magic powers,
And all the fires of genius in decay,
O, what a priceless loss, what a sad world were ours!

This may not be; for ye shall more and more
Expand in kindred majesty and grace,
And mingle with each other mighty lore,
To cheer, exalt, and bless the human race.
He who inspired the great ones of the past,
By whom all good and beauteous things are given,
Will deign to leave His children to the last
This still increasing dower, this one foretaste of heaven.

Praise to the men of energy who planned
This princely place, this treasure-crowded hall!
Praise to the wealthy of our native land,
Who nobly answered to a noble call!
And when these riches, which improve the heart,
Are to their wonted places back consigned,
May this transcendent spectacle of art
Be mirrored in our souls, leaving its light behind!

THE TOWER OF HARKSTONE CASTLE.

BY THE AUTHOR OF "PAUL FERROLL."

IN THREE CHAPTERS.—CHAP. I.

ON a rocky height by the seashore of D—shire stands Harkstone Castle. It was inhabited some seven years ago by a very old man, who had been in possession nearly half a century; and during that time had never been known to give a hint as to his successor. He saw neither friend nor foe, except when absolutely obliged. His estate was well managed by his own agency and that of his steward and attorney; but that was the only ostensible employment he had. He spent his time alone, and was so inaccessible, that people forgot he was alive till they were aroused to the fact by hearing that he was dead.

The probable contents of his will, then, excited great interest; for the estate was wholly in his power, and he had no near relations. He might leave it to his attorney, to the Queen, to his housekeeper; he might turn Harkstone Castle into a hospital; he might have made no will at all; and this seemed the most probable, for none was found, and none had been made by his attorney; and the latter began to make inquiries into his nearest of kin. It was not difficult to find this person, though he was very remote. He was a young man in the army,—Charles Graburn by name,—a man of small means, but not absolutely poor. He was not aware himself that he had a relation in the world; for his parents, who would naturally have talked at times over cousins and great-uncles, died when he was young, and his pedigree had nothing in it interesting to him. When informed of his prospects he at first refused his belief.

"I should like it well enough," said he; "but it's not true. You'll find a will, I'm sure, and I shall only have had the trouble of changing my habits, to return to them again."

He hung back from taking any steps in the business, and really thought of his chance as little as he could help.

One rainy afternoon,—his regiment being then quartered at Birmingham,—he was sitting in the mess-room of the barracks, playing at chess with a brother-officer, when the sound of a carriage coming through the great paved court, and round to the steps of the entrance, drew his eyes to the

A SCULPTOR'S PICTORIAL MUSINGS IN ENGLISH POETRY.

No. II. CHRISTABEL.

"The lovely lady, Christabel,
Whom her father loves so well,
What makes her in the wood so late,
A furlong from the castle-gate?"

She had dreams all yesternight
Of her own betrothed knight;
And she in the midnight wood will pray
For the weal of her lover that's far away."

COLERIDGE.

window, and there he beheld, looking from a railroad-fly, the face of Mr. Spoker, the attorney who had the care of his business.

"I'll be back before you play," said he. "I see a fellow who wants me;" and meeting Mr. Spoker in the passage, he had time for but "Good morning," before the attorney said: "A will has been found."

"I knew it," said Graburn, turning back. "I'm glad I never reckoned upon Harkstone Castle."

"You will enjoy it the more," said Mr. Spoker. "All is left to the next of kin."

"To me?"

"Yes, all to you. He wrote one will, leaving it to you by the name of Grayburn,—with a y in the name,—and another to his 'next of kin,' as if he would make it as sure as possible."

"So it's mine," said Charles.

"Yours, yours," said the attorney.

"Thank God!" said Charles Graburn, betraying that he had been more interested than he had allowed. Then turning back to the mess-room, he entered it, singing, "I'd be a butterfly."

"What's happened to Charley now?" said his opponent,

Frederick Palliser by name, who had been determining where to move his castle. "Charley turned songster!"

"I have got 4000*l.* a-year, and a fine castle, since I went out of the room," said young Graburn.

"By Jove!" said the other.

Charles Graburn got leave from his colonel,—to whom such an occasion seemed a very sufficient reason for granting it,—and went down next day to his new possessions.

Harkstone Castle stood on an isolated low hill, just a quarter of a mile from the beach. Behind it are higher hills, thickly clothed with low wood; and in modern times, by commanding the castle, these surrounding hills would have made it an indefensible place. But its position suited the century it was built in; the hill was steep on all sides, so as to stand in place of a fosse, and the towers followed the irregularity of the ground, covering the top of the hill with a building which afforded abundant shelter and defence to those who manned it. In these latter serene times it was merely picturesque. The internal walls towards the court were pierced with convenient windows for the inhabitants; and when they would look out to the sea and landward view, they did so through narrow apertures, which, though enlarged since they were intended for mere arrow-

slits, had been altered judiciously, and without spoiling the appearance of the castle. The last possessor had left less trace of himself than any one who had lived there fifty or sixty years could possibly be supposed to have done. He had burned all his letters before he died; his books were all on the bookshelves; not so much as a blotting-book bore the mark of his signature on the paper. He had lived to extreme old age, and had seemed to take pleasure in oblitterating all signs that he had lived at all. Charles eagerly opened drawers, and searched cupboards; there was scarcely a relic of the old times just passed, though there were many of the older times which had gone by a hundred years—nay, several hundreds. Suits of armour there were, black-jacks, spurs, cannon-balls; but nothing to tell what the last man had enjoyed, done, or suffered.

Charles was greatly employed in riding over the estate with Mr. Spoker, and arranging what improvements must take place, what timber be cut down, what exchanges with neighbouring squires set on foot. He found, also, that although the castle had been well taken care of on the whole, some repairs on a large scale were become necessary; and he was absorbed in surveys and plans by which to gain the double object of preserving the beauty and character of the building, and at the same time doing to it what was essential for its repair.

One day, when he was looking at the building from the outside, it struck him that one of the projections had no corresponding room within; he was quite certain that where the outer wall expanded into what might be a room of tolerable size, the inside was a flat surface, forming only one side of a passage. He ran up-stairs directly to examine it, expecting to find a doorway blocked up. There was tapestry along the wall; but when it was lifted, nothing but the rough stones were discovered; no trace of doorway, no mark of any former aperture in the wall. It was so unlikely, however, that the projection should consist of solid masonry, that Charles determined to search the outside, to ascertain whether any window might be hidden under the ivy. He mounted a ladder accordingly, followed by a workman carrying a saw and pickaxe; and searching through the ivy in various places,—for it here quite mantled the wall,—he found, in fact, a window, strongly defended with iron bars, but which admitted the eye dimly to penetrate into a room within. Curiosity was all alive to read the secret of this hidden chamber; and making a footing for himself on a projection of the wall by the aid of the stout boughs of the ivy, he gave place to the workman who had accompanied him to break out the bars with the pickaxe he carried, and give him access. While this work was going on he looked anxiously into the room, which he saw better and better as the ivy was cleared and the dimmed glass removed. It was tapestried; and the hangings seemed to have fallen in places through the effects of damp and time; a bed occupied one end, with a canopy crowned with a bunch of feathers, and these began to wave as the air got in. On the side, at right angles with the window, was a narrow door, which opened from the corner of the room, evidently not into the corridor outside, but into either a concealed passage running parallel to the corridor, or into another room. There was a heavy chair by the bed, thrown over and lying on its side; a small table, with a cup on it containing fragments of dry flowers. In one part of the room, on the floor, was a heap of silk or stuff, flung down, it should seem, on some day or night long left behind; the curtains of the bed were quite drawn back on the side next the window, and something dimly glittered, when the light fell on the carpet, like an instrument or ornament of steel.

Charles impatiently looked at all while the man worked away at the window-bars; and when they yielded at last he sprang in. There was little more to be learned with regard to all these objects than what he had already made out. Only, the clothes of the bed were thrown over the pillow, just as a hasty strong hand might replace them after they had been opened. Charles Graburn flung them back as far

as they would go. The inside of the bed was filled with a huge dark something,—plainly it had been a pool of blood.

Charles and the workman looked at each other in mute horror. The latter was the first to speak.

"There's been foul work here, I doubt, sir," said he.

"Best cover it up, and say nothing."

"Cover it up! Not I," cried Charles; "I'll search it out to the very end. Who remembers the tower?"

"If any body does, 'tis Mrs. Many," said the workman; "she that was housekeeper before the master."

"What! and alive still? Where is she?"

"At the house in the forest, sir, where I heard your honour went to tell her of the master's legacy."

"I remember, I remember; she was very ill."

"She'll never be no better, I'm of opinion to think. She's bound to die; she's ninety if she's a day."

"I'll see her this minute," cried Charles, resolving within himself that nobody should carry her the news of the discovery before he could judge of its effect upon her; and hastily descending the ladder, he told the servants and labourers below that he had found strange things, which were not to be meddled with till he came back, and ran off at the speed of a young man to the cottage.

It was a very neat dwelling, a little way within the woodland district called the Forest of Byer, part of which belonged to the Harkstone estate, as a leasehold under the crown. The ancient woman had survived the master whom, old as she was, she had looked on as a young man, and might well do so, for she was bed-ridden; and he, up to the close of his life, had been able to walk as far as her dwelling. She was attended by a woman, who, although nearly sixty, the older woman persisted in calling the girl. The girl was a sad specimen of the fair sex, not above three-parts in possession of her wits; brown, almost black, of complexion, part of the darkness of her hue consisting in dirt; her few ragged locks hung loose about her bare head; her large under-lip drooped on her chin, and her swollen nose matched the lip in its proportions. The clothes she wore were bound round her more like rags than woman's clothes, though they were not bad in themselves; and she seemed in a hurry to do every office that any one asked or wanted, as if she felt herself born to be every body's slave. This old girl, whom the older woman called Phillis, came out hastily at Charles's call; and without seeming to understand that he wanted her to inquire whether her mistress could see him, guided him straight into the chamber where Mrs. Many lay half alive, as it should seem, in her bed.

Charles felt he must not be too abrupt. He therefore began to say something about the legacy; but the old woman, when she understood who it was, began:

"You were here on Wednesday about that; it's all right. Do you want any thing else, sir?"

"Indeed I have something else to ask you. The castle is a strange old place, and I want to know whether there are any hiding-places, any private rooms or passages, about it?"

"None at all, as I know of," said Mrs. Many.

"Every body's dead and gone now that could have been hidden in them, or care about them, except you," said Charles.

"But there's none at all," said the old woman.

"Yes, there is one," said Charles, resolving to try the truth upon her,—for he saw she either knew of none, or would not allow it if she did,—“and there's been murder done in it.”

The old woman answered nothing, but fixed her glassy eyes upon him; he fixedly returned the glance, and hers gave way the first.

"What have you seen?" said she.

He told her exactly.

"I saw it too," said she, "fifty-five years ago; but never spoke of it till now. I believe he's dead that did it."

"You believe only? You are not sure?"

"It was not the master, if that's what you mean," said the old woman. "It was his sorrow; but it was another man's sin."

"And you—and you," said Charles, in great emotion.

"No, sir, I had nothing to do with it, except being the first to see it. My mind's as easy as the poor girl's there."

"I conjure you," said Charles, "tell me what you know."

"Well, you *do* know already, sir. What more? Master Walter hid yonder girl's mother in the tower, and there she perished."

"Master Walter? Whom do you mean? And that wretched woman, *her* mother; what is it you mean?"

"I mean the master that's just dead. 'Twas in the time of the old squire his father, who I was housekeeper to; and Master Walter was man and boy about the house, and very well beloved. I was thirty-two when he was twenty; he went away to amuse himself somewhere or other among the furriners."

"And then,—what then?" said Charles, as she paused in her story.

"Why, then, it was a year and a half after that a man came to me as could speak no English like us, and could do nothing but make signs. He gave me a letter from Master Walter, which said that he had become acquainted with a young lady, who was a mother by him, and he had sent his little infant to my care (there it is, the girl there); and the brother of the child's mother, the letter went on to say, had become aware, and was dodging them every where for vengeance. His father must not know, and he must hide the mother. Now, in those days, the tower you've found out was merely neglected—it's been forgotten since; but he bade me ready it for the young lady, and open a door long locked outside the castle, at the foot of the winding stair, and the night after he and she would be there. I'd no time to say no, if I willed it, and I did not will it; for I loved Master Walter, and the old squire was very harsh upon him. So I took the parcel out of the strange man's hand, and looking in, 'twas indeed a young infant; and first, in a great fright, I ran down home to where my husband was sick, and showed him the letter, and told him all; and he bade me lay down the baby, and we'd tell the neighbours 'twas no business of theirs. The poor child was well-nigh starved with cold and hunger, and I doubt if ever it got over that journey, let it come from where it might; but, for my part, I thought more of the lady and Master Walter, and I did as well as I could for them in the tower."

"The lady actually lived there?" said Charles, finding the old woman pause.

"Yes, yes; and nobody knew,—we thought nobody knew; but it's always been my opinion that some one or other saw me go out or in at the low tower-door one midnight carrying in the poor baby—the girl there; for the mother *would* see her. That would be three weeks after the lady came, and Master Walter was planning taking her elsewhere, but told me he was afraid the brother had not yet given over seeking; and, sir, it was perhaps a week after, Mr. Walter was gone with his father to sessions, or assizes, I forget perfectly which, and I went in through the hidden passage from my room, and the lady was gone, sir; but she had been murdered first; the bed was a pool of blood."

"Horrible!" cried Charles, starting and shuddering as he stood.

"And I could do nothing till Mr. Walter came back, late that evening. Then he like went mad in that room, and he said nothing I could understand, but cries and groans like a speechless animal; and at last down the little stair he ran, and I following, just saw him disappear in the darkness, and not a word nor a sign to say where he was going. I was all of a tremble, and just turned back through the room, and dashed the clothes back over the bed, and ran out and locked the door, and never went near it again, and Master Walter was not heard of, as I know of, for years; but the old squire was a strange man, and might have news of him without ever telling the like of us a word."

"I never heard any thing of this," said Graburn.

"Not likely you should, sir. It was when she was an infant; and though I still call her a girl, she's fifty-six if she's a day."

"When did he come back, then," said Charles.

"Not long before the old squire died, and that's five-and-forty years now since. He said nothing to me, nor I to him. It was just as if neither of us knew what the other was thinking of; and so it always has been—not a word between us. But I saw he sought to see the child, and I brought her in my hand one day from the woman's where I boarded her, for my husband was dead; and he looked at her, and said, 'How old is that hideous creature?' 'Ten years,' I said, looking full at him. So he understood, and gave me a great sum of money—20*l*.—and turned away."

"How strange!" said Graburn.

"I don't know," said the old woman; "she *was* a hideous discreditable creature, and grew worse and worse. But he always behaved very well, and when the old squire died, he gave me this cottage and money enough yearly; and now I can understand perfectly well the legacy is for her; for I am but a few days more for this world, and I've made her safe of it."

"Of course he was not married to the lady," said Graburn.

"He was," said the old woman.

"O, no, no," cried Charles quickly; "no, he could not have been. Why do you think so? I hope not; for in that case she is the heiress."

"O Lord, no," said the old woman. "What could *she* do with the castle and the estate; he knew better than that; a few hundred pounds suit her much better than your thousands."

"I don't know how that may be," said Charles; "but I do know, if she is his legitimate daughter, the thousands are not mine."

"Nonsense," said the old woman; "I would not have told you if I had thought. To think of our old Phillis being the lady of Castle Harkstone, indeed!"

"What reasons have you for believing them married?" said Charles.

"He said he was," said the old woman, "in his letter, and I never doubted it; but don't go to trouble yourself about it. Give the girl a little money year by year, and let her live on in the cottage here, with some one to live with her. Folks have a notion she's something of a daughter to me, though wrong enough; but that's no matter."

"Where's the letter?" said Graburn.

"It was used to be in my box; but I dare say the mice have eaten it," said the old woman.

"Let me see, however," said Walter.

"I will, sir, I will," said the old woman, "if I can lay my hand on it; but I'm desperate tired."

Charles perceived she was; but he also perceived her reluctance to let him see what he asked for. However, he would not lose the opportunity; and succeeding in obtaining from her the key, which she acknowledged was in her pocket by the bed, he unlocked the only box in the room, and saw in one corner a heap of hoarded money, and in another some yellow papers, perishing with age, tied up with a string.

"That's them," said the old woman. "Take 'em, and just put them in the fire; there's nobody but me knows of 'em, and *you* also now; and when I'm gone, you'll have the secret all to yourself."

Graburn did take them, and giving back her key, bade her good morning, and said he would call again to-morrow, and have a little more talk with her, for he was sorry to see how he had tired her.

"Ay, ay," said the old woman. "And as you go out, be so good, sir, as to call the girl, and send her to me."

Graburn did as she requested, and looked with altered eyes upon the half-witted ancient girl, who he believed had already thrust him from his place in the fine old castle. He

eagerly took out the withered letters as he walked along, and tenderly stretching the crumbling paper, read with the utmost difficulty the one in which Walter asked the aid of Martha for the lady who he swore to her was his wife; while the other papers proved to be a certificate of the marriage and baptism.

"That's enough," said Charles, putting back the documents. "So it's all over with me and Harkstone."

He walked very soberly home, and ate his dinner without a very good appetite. Next morning early, he went again to Martha's cottage to get further information if possible; but, early as he came, it was too late. The old woman, over-excited yesterday, had died in the night; and Phillis, on her knees, was scrubbing the floor, while one of the neighbours superintended the arrangements which followed the bustle of a sudden death.

"The secret is all to myself now," thought Charles.

CHAPTER II.

As soon as the young captain got back to the castle from the old woman's house, he ordered a horse, and rode off to the town where Mr. Spoker, the attorney, lived. To him he communicated the discoveries, and the unwelcome fact that the nearest of kin was Phillis, the old man's legitimate daughter.

Mr. Spoker was excessively vexed. He read and re-read the documents to convince himself, if he could, that they were insufficient proofs of her claims.

"After all, Captain Graburn," said he, "it is plain Mr. Chinaway did not mean her to have it. He knew all about her, as well as he could know any thing; and it's my opinion, from that first paper he drew up, in which he evidently had forgotten the spelling of your name, that he meant the estate for you, but preferred writing another, in which he called you next of kin, to making inquiries about you."

"I think so too," said Charles; "but the words are clear against me, and perhaps the meaning also."

"Why did the old fool show them to you?" said Mr. Spoker.

"Not from any good-will to Phillis," said Charles; "merely because I *would* see them."

"Why could not you let them alone?" said the attorney.

"That don't matter now," said Charles. "The hideous old girl has her rights saved by it."

"But perhaps," said Mr. Spoker, "the documents are forged. Who can tell?"

"I'm sure I can't," said Charles.

"Besides, this Phillis may not be the same child. She may be the old woman's, put in place of the right one. She did not say this girl was *not* her own?"

"Yes, she did."

"No, no; she did not tell you that."

"She did, though."

"She did! What was the use of going to the cottage? You are the only witness against yourself."

"Except these papers."

"O, hang the papers!"

"Do you think," said Charles, "they would stand in a court of justice? How do you think a jury would decide?"

Mr. Spoker took them, examined them all through again, to discredit them if possible.

"They would give it against you," said he. "Plague! Besides, the old girl would be much better off with a hundred pounds a-year, than with more," said Mr. Spoker; "her father knew that well enough."

"Very true," said Charles; "but the money's not mine to give or keep."

"If you had let the tower alone till the architect came," said Mr. Spoker, "the old woman would have been dead by that time."

"Well, it's all over," said Charles. "I have not sold my

commission, that's one good thing, and I shall be no worse off than I was before."

"Besides," said Mr. Spoker, "the girl's a fool, and can't make a will. She's old and unhealthy; you must come in before long as her natural heir."

"Next of kin again?" said Charles, smiling. "No, thank you; one tumble's enough," added he, quoting the Fire-king's opinion.

He was in haste to leave the scene of his short-lived fortunes; but he waited, for the sake of his unwelcome cousin, to break to her the change of her fate. He returned to the cottage where the old woman's corpse lay, in the grand serenity of old age, upon the bed, and the forlorn ancient girl sat solitary by it.

"I want to speak to you, Phillis," said he; "come this way, will you?" and she followed him into the little kitchen. "What's to become of you, now that your friend there has left you?"

"Mother, do you mean?" said Phillis.

"Ay."

"Mother said I was to bide in the house," said Phillis.

"But what shall you do for money?"

"There's some in the box; and mother said I was to have it."

"Have you the key," said Captain Graburn.

"He's in mother's pocket," said Phillis.

Charles bade her fetch it, and unlocked the box to see what effect the wealth therein contained would have on her. She looked at it quite unmoved.

"There is a great deal, indeed," said Charles. "Shall you ever spend it, do you think?"

"Yes, I suppose," said Phillis.

"Yes, yes, money slides away; and so it would if you were much richer."

Phillis made no answer, but began to dust the inside of the box.

"And do you know, Phillis," said Captain Graburn, "that you *are* much richer. Mr. Chinaway,—you know?—the master, I mean, who died last month; he has left the castle to you."

Phillis went on dusting; but the tears spurted out of her eyes, and she hung down her head. She was so accustomed to be the object of mockery and jeering, that she believed herself to be so now; and Charles Graburn perceived it.

"Don't think I am making a joke of you," said he. "You can hardly believe it; but, upon my honour, you are his daughter, and every thing he had comes to you."

She put down the lid of the box, dusted the top, and went back to the bedroom, plainly convinced that the grand gentleman was amusing himself at her expense, and that she must be patient as usual. He got up to follow her, but reflected that as she took it in this way, the news would come better by means of some of the people she was accustomed to talk with; and having no mind to dwell on it more himself than was necessary, he went back to the castle, sent for Mr. Spoker, and delivered up every thing to him just as it had been when he came first, and commended to his care the hapless heiress.

"If she prove quite a natural," said Mr. Spoker, "she must be made a ward in chancery; and as you are next heir, the court will give you the management of the estates. But if she have wits enough to get along for herself, somebody must be found to live with her."

"Ay, ay, that's the best way; I want nothing more to do with it," said Charles. "And I thank you, Mr. Spoker, for your good offices throughout the affair (besides professional services, which we'll settle); I heartily wish you farewell. I shall run to the station and catch the up-train; and you'll be so good, will you, as to send my traps after me."

"Fare you well, sir," said old Spoker, and the tears came in his eyes. "You are an honourable man as ever lived. I wish to my heart you had not gone into the south tower."

RASCALDOM AND ITS KINGS.—CARTOUCHE, KING OF PARIS.

By G. W. THORNBURY.

[Second Paper.]

Rise, Paris of Cartouche! with thy royal and thy rascal world—thy buckramed marquises, and pompous bourgeois—thy green tables, and council-boards—thy lordly Louvre, and thy crimson Grève—with thy courtyards full of wigged footmen, and thy boudoirs full of ringleted beauties. In the taverns are noisy shirtless bullies, who will not rest till they are carried home bloody sops upon dripping shutters. In the guard-chambers are booted generals, whose breastplates shine like mirrors, and upon whose shoulders black wigs, after the fashion of their royal master, fall down in scented cascades. The pebbly narrow streets are mere dark defiles, between rocky walls of tall prison-like houses, with broad courtyard-doors and grated windows, blocked up with ponderous gilded coaches, heavy with velvet hampercloths, and fluttering with feathers. Two have met, the wheels have locked; M. le Marquis de Carembole will not give way to M. l'Abbé de Millofleurs; swords are being drawn, and only the dead-rooms of to-night's hospitals will ever fully know the result.

Here is a street gay with cast-off clothes: old red-heeled shoes that have trod the parterres of Versailles, and old orange-and-black scarfs that have been shot-torn at Malplaquet. Here is a triangular cocked-hat that has felt the sting of the bullets of the Languedoc Camisards, and here is a rich blue-and-silver brocade, once worn by a beauty whose thin white fingers dabbled in *aqua Tophana*, which indeed left an ugly stain upon them, as certain lawyers know. Do not sip succory-water or chocolate with that lady, M. l'Ambassadeur, or you are undone. Step into the druggist's shop where our lady bought that dreadful cosmetic that turns faces death-colour, and you will find our old friend M. Diaforius, who will talk to you by the hour of "*dyspepsie ou bradypepsie*." He is learned in electuaries, and can mix up a *fucus* with admirable skill. M. Jourdain runs their fingers along emerald silks, in every little dim shop round the Chatelet; and the dregs of the Seine only know the victims of Scapin, now turned a friend of Cartouche, knight of the steel and cord, bound to free pursy canons of charity purses, syndics of redundant fees, even bullies of their spoil, and boggars of their savings. Cartouche is every where: we see him with his short thick-set figure and hard frowning face, eyebrows twisted, barred-up mouth, and restless, feverish eyes, terribly alive and watchful, while the face is long ago turned into mere stone. There he is, in the wide circle of the wits and nobles and poets and architects and dancing-masters, waiting at the duke's levee. I think that must be him, too, amid the thronging coaches and smoking torches at the great ball at the Louvre. You would not think that was Cartouche leaning over the Pont Neuf, or laughing at the Scaramouche in the theatre.

He is at the night-tavern orgies, where drunken sirens fling champagne-glasses at bald fiddlers' heads; he is sitting in deferential conference with old gentlemen on the public seats in walks and gardens; he talks on the quays with bluff sailors; he struts, with new-gilt sword or maroon coat, up the centre walk of Notre Dame, and kneels with ostentatious devotion before shining altars, blazing with candles and glistening with metal stars and crosses. He is hearty with the hearty, rough with the rough, gentle with the gentle; he is apostolically "all things to all men." But with all of them, were he watched, his stealthy eye might be seen, as his victims stooped to sip their wine, or threw their leg across the billiard-board, leaping on them with sudden and terrible scorn and malice. Woe betide them to-morrow! The abbé, stripped and bruised, will be found dead, crammed into his own dim confessional; the young Savoy coont floating down the Seine, with a nasty drill-hole under his third rib; the rich silk-merchant of Rue

de la Friperie, half dead, thrust into an empty chest in a vaulted warehouse near the Temple. No fashion was safe in Paris against invisible murder; there is no defence; the diamond-wearers, silk-flaunters, watch-showers, tremble at the dusk. Every slam of a door betokens murder, every scraping is a robber's file.

"This must be put a stop to," as Mathew's French friend said when the servant brought him news of his wife's having presented him with three children at a birth. D'Argenson's saturnine visage grew black as a Bastille *oubliette*; his huge wig shook with rage; he ordered all the prisoners' pet-pigeons on the Bastille roof to be shot out of mere spite. Even his harem of nuns could not soothe him; he was silent at court, and gloomy when the grand monarch honoured him by requesting him to carry his cane, or to stoop and pick up a glove; his myrmidons thronged the streets and market-places in as many disguises as the agents of the Fronde once assumed; they lay silent in corners of lumbering diligences, waiting with secretly-cocked carbines for the masked head to thrust in at the window; they pretended to roll in drunken sleeps upon wine-shop benches; they watched at bridge-foots; they attended trials to watch eyes that signalled to the prisoners; they lurked at suspicious street-corners, and spied from garret-windows and behind chimneys. But the conspiracy had spread too deep and far; that great upas-tree had struck root into churches and drawing-rooms, into shops and guard-rooms; gendarmes themselves were in Cartouche's pay; the very king was at their mercy.

A thousand schemes were laid to entrap Cartouche, but all in vain; the gipsy, soldier, gambler, thief, had sounded every depth of human wickedness, and lying like a spider, surrounded by threads of feelers, he could discern, through mistresses, accomplices, agents, and spies, the remotest germ of a plot. Once they nearly had him. He was found to sleep in a certain house at a certain hour; a traitor disclosed every movement,—where his pistol would be and where his knife, in what relative position to the window the chair on which his embroidered clothes would be heaped, and where the bed was in relation to the door. There was much whispering of bulldog-heads at the police bureau; much looking at rapier-points, and much fitting of looks and cartridges. At the certain hour, stealthy as lovers, stole the cloaked men to the specified number. Street quiet, house quiet; no noise, no light. Examine memoranda: door, brown? Door, brown.

Blind at third-floor window? Blind at third-floor window. A knock—two soldiers at the door—one to ascend the stairs; faces grimmer, and gunpowder burning to go off.

Third floor; demand entrance; no answer. "Blow off the lock. We have him."

No; empty bed; still warm, but no Cartouche.

A noise below.

Bang!

"Cartouche! Cartouche!" Cries of "He has escaped!"

It was Cartouche. He had escaped.

The first step in the quiet street had reached his jealous tightly-strung ears. He looked out.

"Soldiers! Lost!"

He locked the door, ran up the chimney, got down from the roof into the garret; waited till the soldiers were fully intent on rummaging the disappointing room, pricking mattresses with suspicious swords, smashing cupboards, searching trousers-pockets, looking out of window, pulling up flooring.

Now is the time. He takes off his shoes, steals down a back-stair, leaps through the sentries, fires off a pistol,—he must have his bravado,—and crying,

"It is I—Cartouche!" escapes into the night.

Slinking, downcast, and angry, the baffled rogue-catchers sneak back to be browbeaten by the ferocious D'Argenson,—that wigged terror of all *empoisonneuses*, and monarch of the "Burning Chamber."

But the enemies of Cartouche had their escapes too. On

one occasion a young rich abbé received an invitation to come and see the furniture of a mansion,—say No. Quarante-neuf, Street of the Bleeding Heart; a street all lonely gardens and monastic-looking houses. There is to be a sale there. Furniture padded and cushioned with Utrecht velvet, and glittering with mirrors and silver fountains. There are some voluptuous Titians, &c., such as abbés keep covered up in studies full of the Fathers; and where an open Chrysostome gathers dust for months. Abbé de Rien dresses in best style,—cassock, shovel-hat, scented gloves, cane-cane (head of Venus, including bust),—and takes a hackney-coach to the street with the droll name, probably where a convent once stood; is put down, and lounges up the street to see whereabouts he has got to. Quite the suburbs. Over the wall tall beckoning poplars nod and point, and, *c'est drôle*, there is a thistle gone to seed just by the door-scraper at the porter's lodge. Our late proprietor must have been a misanthrope, like M. Argan, and have shunned society: just the place, though, to trap a real nude Titian, glowing, blue and red, and flesh that would bleed if you pricked it.

He rings; a ghastly rattle, and a bell tolls, as it were, a mile off, up a mouldy corridor. Something like a chill creeps over him; but, bah! he takes a pinch of *Millefleurs* snuff from his Sèvres snuff box, painted (*inside*) with Diana's Surprise, and (*outside*) with Susannah and the Elders. The door opens: rough fellow, with no carnation-cheeks, and no powdered periwig.

"Stap my vitals! quite a vulgarian; yes, indeed, by Venus! as the Marquis de Mirabella pleasantly and wittily observed of my Swiss valet."

With a condescending look at the black-browed vulgarian, the abbé walks in, yawning and swinging his cameo-cane (subject, bust of Venus and head); walks up-stairs, observes with critical eye that there is no tapestry in the hall, no heraldic chairs, no nothing, except a great brass many-armed chandelier swinging by a long brass cable from the roof, some four stories up. He walks up, toils up, many flights of oak stairs, enters empty rooms, gets astonished, takes more snuff; when, to his horror, looking down a corridor, he suddenly sees three men advancing on him with drawn swords. By Venus, here's an end to all ortolan suppers and Versailles promenades and ombre! *Dieu merci!* the chandelier; he is fat and wheezy. Hurrah! a spring,—a tremendous deer-like spring,—beyond, but brought up by a great oscillating jar, and the great brass chain sways like a rope in a storm. He is saved. Quick down; plump on the sharp point of the chandelier—very different to the soft cushions of fashionable chapels; a tumble on the black and white marble-hall; a shout; a pistol-shot; a rush across the court, crushing the thistle that never did harm to any one; a scrambling run down the street, and the abbé reaches a chair-stand; takes a chair; is borne to his lodgings by the frightened, backward-looking, trotting sedan-men; and the abbé is brought to his own house, half-fainting, and only to be revived by repeated pinches of *Millefleurs*, and much rubbing of temples by his pretty housekeeper Lisette.

Still, with all this audacity, somehow or other the great conveyancing firm of Cartouche and Co. does not thrive. The agency is so expensive. Spies require enormous wages, or they turn false. The purchasers of stolen goods give small sums. The safe lodgings for storing treasure, and the lurking-places, with proper trap-doors, double-roofs, and sliding-panels, demand enormous rents. There are mistresses, too, to keep, who play knuckle-down with diamonds, and make sauce of pearls; Delias, who powder their hair with gold-dust and bathe in perfumes. Refuse them a set of emeralds, or a roomful of rococo, they pout and threaten mysterious things. Watches may come in by hatfuls, diamonds by chestfuls, and crowns and louis-d'ors by the wagon-load, yet down it all goes, with a merry rush, into those pleasant pits of hell bordered by primroses. It is very quick travelling, the primrose-path to Acheron. The paper-money is a Godsend, because it is such a concentration of wealth. It packs so close, and goes so far. We stop mails with bun-

dles of the precious silver-paper; bags of money are taken—so much that the broken-down Cartouche horses drop half of it, and sow the road with gold-pieces, enough to feed all the starving Scotchmen in Boulogne for the Pretender's miserable brandy-drinking, bragging, selfish lifetime.

Very slowly but surely D'Argenson gets in the crowbar that is to break open this bloody den of wickedness; slowly filters through circumstances that show where the underground dens and traps lie hid; and this that I am going to relate above all things. It had long been known, to the inexpressible horror of quiet rich citizens, that Cartouche had in his pay, not merely escaped galley-slaves and highwaymen, but broken-down gamblers of family, and runaway prodigals; countless Don Juans as well as ragged Lazarillos; not merely bankrupt tradesmen and degraded priests,—the most shameless of men,—but even noblemen's footmen, still in their service, and officers and gentlemen of supposed respectability.

Mutilated bodies were constantly found in the Seine, faces gashed and cut to prevent them being recognised,—bodies, either naked, or with the coat-pockets turned inside out, or printed red by crimson fingers; while France was ringing with the trumpets that proclaimed the conquest of Flemish towns, and lit with the bonfires to announce the passage of the Rhine. Paris itself, where the king did or should reside (for Louis was not fond of Paris, remembering his frights and flights during the Fronde), was kept in awe by a handful of unknown and unseen robbers. One day the body of a man, supposed to be an accomplice of Cartouche, is found cruelly mutilated in a road near Paris; no search can discover the murderers. On the morning of the murder, an officer, living in humble lodgings, comes home, pale and worn out, and requests his landlady, after he has dressed, to send his linen to the wash. His jaded look arouses her suspicions. As she broods over his strange anxious manner, and the unusual lateness of his return, a crier passes under her window, shouting out the announcement of a reward for the discovery of a dreadful murder committed the night before. Her eyes turn to the heap of linen her lodger has just shuffled off before he took his chocolate and sank into that tired sleep.

Lord, how he snores!

There are three spots of blood on the left ruffle, and the right sleeve is wet and torn.

She goes to the police. The tired lodger is arrested, found guilty, and executed. The dying man's confession implicates Cartouche. It was that great captain's wise but cruel precaution to murder all spies and suspected persons. What tyrant can rule but by terror? Ask the Emperor of France,—the Blood of the Bourbon regalia.

These discoveries make the place rather too hot for Cartouche. The severity of the search necessitates an inconveniently frequent change of costume; he has to sleep every night in a different house. The caresses of women he suspects grow loathsome to him. He resolves on a bold scheme to escape pursuit. Looking over the soiled and red pages of his memory, he remembered a certain Jean Balmar, a fellow-soldier in Flanders, who had told him about his old parents in Auvergne, and had given him a message to them, which he had never delivered. This comrade soon after fell by his side, and Cartouche had become his executor, retaining his letters, passport, and a few soldier's personals. He was not unlike him in face, and resolved to pass himself off as the dead soldier. Leaving Paris at night, he reached, by secret journeys, the old labourer's house, quickly imposed on the old purblind couple, made his arrival welcome by liberal presents, and was at once adopted and allowed as their son. Cartouche was safe. The man of a hundred murders was once more innocent, free, and could begin life again.

But the country life grew hateful to the young Parisian. The day seemed prison-long without wine, cards, and women. At any risks, he must go back to Paris, head his band, keep Paris in terror, and venture life a dozen times a-day. He

went, and the end was not far distant. A daring robbery in Versailles at this time increased the vigilance of the police, and perhaps accelerated his fate. The hemp was not merely grown for him, but cut and spun, nay, even twisted and rove. One day, when Versailles awoke from its heavy sleep after ball and revel, to the horror of stewards and the lifting-up of hands of major-domos, and all that obsequious band of noodles who assisted the great monarch in putting on his shirt and tying his garters, all the new gold fringe of one of the dining-rooms—quite new, very heavy, and of great value—was found clipped off and gone. Tremendous was the hue and cry! All rooms were searched, garden-shrubberies ransacked, but still no fringe. Police are every where; they watch the king at dinner; he does not move without them. On a sudden, as Louis is preparing with great state, and the usual routine of ceremony that fences in fools, to take his seat at dinner, up, with a bang and flap on the table, just at the king's nose, comes the bundle of fringe, with the following inscription:

"Le jeu ne vaut pas la chandelle."

The search had been too troublesome; the thief must have been a domestic of high standing.

Such were the times from whose corruption sprang a Cartouche. At last he was seized,—trapped in a sleeping-place,—and loaded with irons. In prison he was cheerful, and even gay. He was visited by ladies of rank, to whom he showed the weight of his fetters laughing.

His three wives came to see him. He had pet-names for them all; one he called the Abbess. At first obdurate, when well tortured by the rack, he confessed his crimes, disclosed his accomplices of all ranks (some almost beyond prosecution), exhorted his fellow-prisoners to repentance, and listened to the priest.

At the appointed day he was led out to the high scaffold of the Grève,—a rolling troubled sea of eyes; was stripped, and bound to a wheel by the executioner; his limbs were broken by blows of an iron bar. At the fourteenth stroke expired the King of Paris, and the terror of France, amidst a surging murmur of sighs and curses. So perish all who follow the path of Cain, who torture society by crime, or disorganise society that their talent might lead and bind together.

POLYGLOT READINGS IN PROVERBS.

A SOOTH BOURD IS NAE BOURD (Scotch). That is, a true joke is no joke.—"Bourd," like many other Scotch words, is old French; it is found in the proverb, "True joke never pleased,"—*Bourdes pleyes ne plaisent jamais*. The Spaniards also say, "There is no worse jest than a true one,"—*No hay peor burla que la verdadera*. The truest jest sounds worst in guilty ears. W. K. KELLY.

HOUSEHOLD BOOKS.

THESE are fast becoming a large library in themselves,—books, we mean, of a directly useful and practical character on matters relating to Home and its economy. Nay, there are single subjects,—gardening, for example,—which alone take up a great amount of space in the field of literary activity. Our contributor, Mr. Hibberd, seems to be doing his best to add to the number in that direction. His latest

issue is a series of individual treatises on flowers, called *Garden Favourites and Exhibition Flowers*.* This is not the place to criticise works from such hands; but we may briefly indicate the nature of the scheme. The six published numbers are devoted respectively to the Ranunculus, Tulip, Calceolaria, Hyacinth, Geranium, and Rose. What a world of beauty does not even the very sound of the names conjure up! In each of these tracts we have the history, properties, cultivation, propagation, and management of the plant shown in detail, with a coloured frontispiece of that particular flower of the family which Mr. Hibberd considers as among its worthiest representatives.

In *The Reason Why*,† we sweep over broader ground; in fact, it would be more difficult to show what subjects are not dealt with than those that are. The idea of the book is an excellent one. All those questions that are so perpetually recurring in our daily experience, on all sorts of matters—and for the answers to which we look mainly to scientific illumination—are here collected together, and dealt with just as the inquirer would wish, who is at a loss at any given point, and wishes to know the *reason why*. Much of the work is, of course, compilation; but there is also, we perceive, a large amount of original and valuable matter that could only have been brought together by a man possessing extensive scientific knowledge, and by one who, when he had so collected it, was able to give others the benefit of his wealth, by telling what he had to say in a straightforward, manly, and, at times, elegant style. The work is illustrated by a great number of engravings.

In Dr. McCormac's book on Consumption,‡ we meet with another proof of the tendency of all modern knowledge to show how little value inheres in those artificial agencies—such as medicine—to which we have been hitherto accustomed chiefly to look; and, on the other hand, how much ground there is for believing that a great advance may be made in the successful treatment of disease, by a more determined reliance on Nature's own powers—by a greater study of her ways and intentions. Look, for instance, at the recent work published by one of our most eminent physicians, Sir John Forbes, *On Nature and Art in the Cure of Disease*. Is it not most instructive to find such a man, towards the close of a long, honourable, and highly prosperous career, acknowledging that Art cannot be more than a mere handmaid to Nature, that it is Nature alone cures, not the medicine, or its administrator; although the services of the last, in understanding for himself, and pointing out to the patient what it is that Nature is suffering from, and how she is trying to right herself, may be—must be—most valuable?

We are,—it is useless to disguise it,—only on the very threshold of a genuine and efficient medical science. Physiology has begun to show us in what direction we must travel; but habit, authority, unwillingness to make the sacrifices that errors of all kinds demand as the price of remedy, difficulties of social life, the relations of medical men with the public, tending to make mystery itself valuable in the eyes of those who suffer most from it,—these and a host of other influences retard as yet the growth of the new school of medicine, which is not the less rising steadily up among us. We do not refer to any one creed or practice beyond this,—more faith in nature and in natural influences, less faith in mere artificial appliances, except where these are obviously substitutes for the former, and so devised as to make the nearest possible approach to them.

Dr. McCormac belongs to the new faith, of which he is indeed a distinguished example. He traces this peculiarly fatal disease—consumption—mainly to breathing impure air and to sedentary habits; in other words, to violations of two of the very foremost of the laws which Nature has written on the human constitution. Naturally, then, he asks: "How is it possible for such things as wire-respirators, or codfish-oil, or a regulated temperature, hydrocyanic

* London: Groombridge and Co.

† London: Houlston and Wright.

‡ London: Longman and Co.

acid even, or digitalis, or antimony, chlorine or iodine exhalations, or steel, or meats, or drinks, or change of air, to have influence on a malady which is occasioned by the respiration of foul air, yet during the presumed treatment of which foul air, or air more or less fouled, continues to be respired?"

What will many of our readers say to a recommendation to consumptive patients, as well as to the world generally, to admit the night-air to their bedrooms? Yet thus bold is the doctor. He says:

"It was once a general medical prepossession, in truth, that taking cold, that the damp night-air was a source—the source, indeed—of consumption; but this was a great error. The respiration of the coldest dampest air will never, never did since the world began, induce consumption. It is only the respiration of dirty, foul, unrenewed air that induces consumption; else, so far as this is concerned, the coldness or the warmth, the dryness or the dampness, makes no sort of difference. If only the air be pure, however cold, however damp, however dry, there will be no consumption. But if the air be impure, however dry, however warm, there consumption, if this impure air be habitually respired, will be sure to follow. It is only necessary, in order to avert the sense and reality of a chill, to obviate, by the means at our disposal, the artificial evaporation induced by damp day or night coverings. If the air be sufficiently warmed indoors, if the body be sufficiently protected out of doors, there will be no chance of taking cold, whether by night or by day, certainly none of consumption, even in the case of the most sickly and delicate persons. It is not breathing cold air, or admitting it into our dwellings merely, it is the insufficient protection of our persons, not by warm foul air, but by warm pure air and warm coverings, that occasions taking cold. Contrary to the general prepossession, air is as good, nay, better, by night than by day. The night-air as such never injured any one; it is only impure or chill air that does so. How, indeed, is it possible to have any air at night except night-air? Impure night-air kills just as impure day-air kills. Not so pure night-air, which should be most freely admitted into the chambers of the consumptive, until the air in these chambers shall be as pure and as fresh, else heated at pleasure, as the air outside the chamber beneath the free heavens. For years I have slept with my chamber-window open! For years my family, protected by sufficient night-coverings, have done so. For years, too, those whom I have induced to follow the same course, have slept with their chamber-windows open, with every conceivable advantage, so far as the respiration of a pure genial atmosphere, instead of an atmosphere else necessarily close and corrupt all night through, can prove advantageous."

The writer of these notices can add the testimony of his own experience as to the value, not merely the safety, of insuring a free supply of air through the night by leaving open the chamber-windows, modified, of course, by the seasons, but always open to some extent, even in the severest winter.

RANSOME'S PATENT ARTIFICIAL STONE.

Did you ever set up a few vases, statues, fountains, basins, and such things, in your garden, and have the mortification of seeing them split into powder with the sun, or divide piecemeal with the frost? You may or may not; but the

PATENT ARTIFICIAL STONE.

thing is by no means uncommon; for nine-tenths of the garden-ornaments that are made of that mysterious compound called "artificial stone" are fit only to adorn for a few nights an oyster-shell grotto, or beautify the tables of a flower-show or rural fête. When we talk of stone, we have an idea of something that will last at least for years; but the majority of the compounds used in moulding as substitutes for

the real marble, which the sculptor has chiselled, are as temporary in durability as the fame of their makers. Of course there are exceptions. Coade and Seeley, and Cottam and Hallen are noted for the superiority of their productions in this way; but the greatest triumph ever achieved in the production of a substitute is that known as Ransome's Siliceous Stone, which is the result of years of patient study and experiment in the hands of a man eminently gifted as an experimental chemist. To tell the history of this invention would be a long though interesting narrative, not here to be attempted. The *Times* has spread the inventor's fame; and the most eminent men of science—Ansted, De la Beche, and others—have testified of its high merit. It is, in brief, a real stone artificially made, and is more durable than any real stone with which we are acquainted, except, perhaps, granite and porphyry. How it is made does not matter so much as that vases of all sizes and patterns (many of them examples of high art), plinths, cornices, fountains, statues, and, indeed, every variety of ornament for which stone would be a proper material, are produced in it, and may be any day inspected at the offices in Cannon Row, Westminster, or the works at Ipswich. The object of producing a substitute for real stone is, that works of art may be multiplied at low cost; and when science enables the modeller to produce them in a material fitted to bear any weather for any length of time, without a change being possible, a great boon is conferred upon those who cannot go direct to the sculptor for the gratification of taste. Perhaps an opportunity may occur when we may speak more at length of the high merits of Mr. Ransome's invention; but at present we simply call our readers' attention to the *jardinet*, of which we give an illustration.

This is quite a novelty in stone-manufacture, and is intended to form a prominent garden-ornament, and is just the thing to face the drawing-room windows as a terrace-embellishment. It is, in its general character, boldly classic; the outline is elegantly broken, and the floral decorations are in good keeping with the dimensions and the purpose to which it is to be appropriated. Well stocked with gay flowers, judiciously grouped as to character and colour, it will prove one of the noblest additions ever made to the Italian style of gardening, for which, indeed, it is best suited. It is six feet in diameter and one foot deep. Our engraving is copied from a photograph taken expressly for the purpose, and is therefore free from the least exaggeration.

SHIRLEY HIBBERD.

SPECIMENS OF FOREIGN SCHOOLS; NO. VII.

BY DEBAY.

THE FIRST CRADLE.

THE FIRST CRADLE.

By DEBAY.

Truly the first cradle, wherein we are all rocked; the maternal arms and bosom which hold us and our little dreams during that briefest time, just after the sun of life has risen, indeed, while his rays glitter on the horizon of that world which is to bound the day of our life,—day, which is said to lie between two eternities, the future and the past. How like two blossoms on one stem lie these little ones, sleep-involved and mutually intertwined, lost in infantine dreams, if, indeed, their dreams have not more of reality than those that break the half-death which in after-life we call sleep!

The graceful mother has made a cradle of her own limbs, and a resting-place of her own bosom, wherein they couch peacefully at ease; over them she stoops her head, graceful as a lily above the water, while her massed hair streams over shoulder and breast and back, thrown loose and free, to fall in solid wave and curl, its sweepy masses clustering heavily together, to form a weighty coronet about her face. She broods over the children as might have brooded over the great common mother Eve over the sleeping Cain and Abel. Doubtless they lay in such a cradle as this, and she bent over them, penetrated with the divine mystery of motherhood. Hardly could she have looked through the dim future upon their divergent paths of life; rather she became absorbed, as the matron before us is, in the solemn satisfaction of the fulfilment of life's purpose; and through content and dreaming peace, knew God's will to be the great solution of the mystery, and upon that resting saw only gratitude, hope, and trustfulness, and therein calmly laid her heart.

Brooding, she sustains them, and they sleep the sleep of the flowers; her love about them is as the calm warm breath of summer's night that soothes to easeful and perfect rest; her face reigning the peaceful moon of sleep-time, under whose calm and benignant presence these human blooms are folded. How well balanced her figure is! so that while enfolding the infants she makes their weight easy to sustain, and with small muscular effort keeps herself poised, the centre of gravity being undisturbed during their perfect repose; or should some little limb shift its place, a slight pressure or alteration of the foot will bring all to rights again in steady ease, and of course grace, with her.

The matron's rounded and elegant limbs,—passed from the slender length of girlish youth to the stately vigour of full womanhood,—are developed into the perfect form of the feminine adult; her hair has grown heavy and long; the glory of perfect woman is upon her, happy in perfection.

In noticing "The Italian Improvisatore," by Duret, previously engraved in this Magazine, we stated it to be an example of the modern-romance school of sculpture, which has for its foundation much of the character of the antique satyric statues of late date. Now "The First Cradle" before us is, in some sense, another work of the same class; but the reader will do well to notice how superior the latter is in every quality of design and execution, to say nothing of the more elevated and refined taste evinced by Debay in choice of subject. His work is, however, not without faults from which "The Improvisatore" is free; thus, for instance, the face appears too large for the size of the head as a whole, and the ultra-classical profile, having-forehead and nose in one line, with the retreating angle of the former, deprive the features of an expression of intellect and character. (The artist has evidently preferred the *petite* Venus di Medici to the graver, grander, nobler, and more vigorous Venus of Milo.) "The Improvisatore," although comparatively coarse, is more complete and whole in that realism of execution which is called for in a subject so strictly natural and unideal as that before us.

There is a cast of this statue in the Crystal Palace, placed among numerous examples of similar qualities, which supply means for the study of the progress and condition of modern French art.

L. L.

THE TOWER OF HARKSTONE CASTLE.

By THE AUTHOR OF "PAUL FERROLLE."

IN THREE CHAPTERS.—CHAP. III.

It was a very short time after these events that old Phillis became Miss Chinaway, and that Mr. and Mrs. Spoker lived with her in Harkstone Castle. Mr. Spoker continued his practice as usual, and was little at home. His wife and their one little boy were constant inmates of Harkstone, and more or less companions to Phillis. But her habits were too much confirmed by age, and by her very limited intellect, to alter in proportion to her fortunes. She slunk about, dropping curtsies to the footman, till strictly forbidden by Mrs. Spoker, and dusting her own room with unconquerable pertinacity. When the idea could be conveyed to her that any particular thing was wrong, she would forbear that thing—why it was wrong she never reflected, the fact was enough; but as to other prohibitions, she disregarded them. Curtseying to the footman she left off, but dusting she adhered to. She made an enormous quantity of worsted stockings, ceasing to knit only at those times when she had no more worsted; for it was very long before she understood that she had money to spend in procuring things she wished to have. Idleness, unhappily, she could not enjoy; nor was the labour she had been trained to any pleasure to her; if any thing occurred which could fill her vacant hours, therefore, it was a boon. One of Mr. Spoker's brothers brought the old heiress a dog; and this dog she dimly looked upon as her charge, and fed and attended upon it, till it doted upon her. Its real name was Fido; but she called it by the general name of "pooppy," which she was accustomed to apply to dogs of all ages. "Pooppy," she would say, "come, pooppy, pooppy;" and he fawned on her and frolicked round her, much the more aristocratic possessor of the castle of the two. By slow degrees she came to assert this dog's right to do what he liked,—to lie on the chairs, to drink the cream, to run over the garden. An order not to allow these things from Mrs. Spoker would have been obeyed, but eluded, nay, perhaps resented; and Mrs. Spoker had her own views, which induced her to cultivate the affections of the heiress.

Her little boy was four years old; and the ancient Phillis made many advances to him, which the mother was very anxious to promote. But Phillis's notions of children were all drawn from those who occasionally had been confided to her old guardian's care, and among whom she had always been a favourite; but then their habits were not so tender as little Harry Spoker's. What she heard other people say she was much in the habit of adopting; her addresses to these young persons, therefore, had usually been in the style of her mother's,—"I'll give you the stick, naughty boy;" or, "I warrant I'll soon make you remember." No idea of exception had attached to these menaces, either in her own mind or that of the urchins, who proceeded in their own course quite regardless of her. But Harry Spoker thought of them more seriously; and in his answers he treated them as though they had been truths. "Naughty, ugly, old miss," would he reply; "I will whip you, for I hate you." Phillis paid no kind of attention to these hard words, but would pour her tea into the saucer, and hold it out for him, as if no bad language had passed on either side. If he took a fancy to pull down her gray hair, or to search her pocket for her housewife, he was quite welcome; and when he once or twice hid his face behind the screen, she played at bo-peep with him till he himself was exhausted. "I've laughed out all my laugh," said he; "stop now."

Her persevering blandishments by degrees overcame his suspicions, and he began to grow fond of her company, and to exert all his whims, and much of his affection, upon her. This made her very happy, and she became his slave, as much as if she were still the ragged dweller of the cottage. Mrs. Spoker also was delighted, for she knew that Harkstone Castle was in the old girl's power.

"If she have but the sense to make a will?" said she to her husband; "and I really don't myself think she is deficient. She chooses her own dinner now, and she can buy things at the shop as well as any body."

"That's all very well," said Mr. Spoker; "but her sense, or her nonsense alike, ought to leave the estate to the captain; and, my dear, I won't have any interference to induce her to dispose of it otherwise. Now I'm quite serious."

Mrs. Spoker answered nothing; but she kept her own ideas on the subject. She could not quite satisfy herself whether or not Phillis believed that she was really the owner of the castle. Phillis inhabited it in silence, as she had done the cottage, conforming to all that other people did; but Mrs. Spoker tried to arouse in her a sense of possession. She often exhorted her "to exert herself to fill her position," words which, like others, Phillis adopted, and, when she found occasion, applied them.

Little Harry one day, trying in vain to draw her from her knitting to play, said, "Shall you never be ready, Silly?" for that was the appellation to which he had reduced Phillis.

"Yes; but you wait a minute. I must exert myself to fill my position." And when Harry asked, "What's that mean, Silly?" she answered, "I'm bound to finish your stockings afore Sunday." And indeed she worked hard for Harry.

Mrs. Spoker tried to make her comprehend that Mr. Chinaway had made her possessor of Harkstone by a paper,—she did not call it a will; and this transaction Phillis seemed to comprehend better than any in which actual money passed before her eyes.

"He drew a paper," said Phillis, collecting the heads of the argument, "and put in any body's name as pleased him. He was the master."

"And you are the mistress now," said Mrs. Spoker, "and can put in any body's name too."

"Just as you please, ma'am," said Phillis.

"No, you must not say that. I've nothing to do with it. But probably you like some people better than others. Whom do you like?"

"I like them as is kind to me," said Phillis; and the subject seemed to pass as entirely from her mind as if it had been a lesson read at school.

"Be kind to poor Phillis," said Mrs. Spoker to her little son, "and don't call her *Silly*; call her Phillis."

The people in the county were very much amused by what had taken place at the old castle, and several of the families called there, and tried to see the heiress. But Mr. Spoker was a sensible man, and would neither allow her to appear before such people, nor his wife to profit by her own residence in the castle to enter into their society. He explained the manner in which he and Mrs. Spoker were situated, and declared himself merely the agent for the estate, and that his wife, at the request of Captain Graburn, had consented to live with the friendless Phillis. People in general gave him credit for a design to appropriate the estate; but nobody could deny that what he said was rational and satisfactory.

Meantime his own and his wife's connections were not to be denied; and they came many and frequently to the castle. Still Mr. Spoker allowed no splendours. There was a certain sum appropriated by him to housekeeping, and he would not permit his wife to add more than that sum to their own income.

"How should I answer, my dear, to the next possessor," said he, "when accounts come to be looked over, for spending more than what will keep up a proper house for poor Phillis, and remunerate myself and you for our care of her?"

"That depends on who is the next possessor," said Mrs. Spoker. "I heard her say one day it should be the person who was kind to her; and if any body's kind, I know who that is."

"Did she, indeed?" said Mr. Spoker. "What made her say that, I wonder?"

"O, you underrate her terribly," said his wife. "She has far more sense than you think for."

"I'm afraid so," muttered Mr. Spoker; and when he went to his room to write letters for that day's post, he looked for Captain Graburn's address, and indited him the following epistle:

"DEAR SIR,—I feel myself in a very anxious position; for should any thing happen to old Miss Chinaway, and should she make a will contrary to justice, I might be accused of neglecting your interests in a way very derogatory to my professional integrity. People will get about her, and there's no knowing what impression they may make by affecting a kind manner, to which she has never been used. Therefore, my dear sir, I should strongly counsel you to pay a visit to the castle to look after your own fortunes, and tiddle the heiress.

Yours faithfully,
L. SPOKER."

A few days brought him back the answer.

"Dublin, Porto Bello Barracks.

MY DEAR SIR,—Many thanks; but let people get about her. Life is too short to 'tiddle the heiress,' and I am enjoying it now, and have no mind to waste the present upon the chance of securing what I might either fail to get, or be too old to have pleasure from in future. How is the old girl? as handsome as ever?

Yours very truly,
CHARLES GRABURN.

Many and kind thanks to you."

"He's making game of me, I almost think," said Mr. Spoker to himself, as he folded up this letter. "He need not have been so short upon me."

The years 1853-4 passed away, all these circumstances unaltered, except by the changes silently wrought on them by outward events. Phillis gradually took in some of the new ideas about her, and was thought competent by the committee of a local charity to sign the sale of some land which they wanted for enlarging their building. Mrs. Spoker had been very benevolent about this land. She thoroughly believed that her wishes on the subject were all for the school, and was quite justified to herself in making the best of Phillis's ability to sell the land by the convenience it would be to the charity. She was eager to promote the sale by assurances that Phillis understood what was wanted, and that she could fully enter into the scheme; and when the trustees came to talk with the strange heiress, rejoiced aloud, for the sake of Harkstone school, that they understood Phillis's peculiarities to be only the result of previous circumstances, and the change in them. Mr. Spoker said to his wife:

"If she can do this, she can also make a will. I wish Captain Graburn would look after her."

"I am sure, my dear, I wish he would, poor young man," said his wife.

This young man, meantime, was going his own way, with as little reference to Castle Harkstone as possible. He had put it out of his head at once, and the raillery of the many and sympathy of the few were alike distasteful to him. He had done what was both right and very unpleasant, and he wished to *have done* with it altogether. It was an odd page in life, turned over and, as far as depended on him, forgotten. Like other young soldiers, when the eventful 1854 came, he was entirely of opinion that we ought to go to war, because it would give the army the opportunity of active service, and was highly gratified to find his opinion adopted by the kings and queens of the earth, and hostilities declared against Russia. He belonged to a cavalry regiment which was not one of those ordered out upon service; and the moment this was ascertained he posted to the Horse Guards to get upon active service, which he could only do by exchanging into a regiment of infantry already under orders for the Crimea. In acting thus, he did what was not only pleasant to himself, but what he had quite a right to do; for, except one first cousin by his mother's side, he had not a relation whose wishes to detain him need have any

weight with him. This first cousin was a bragging prating fool, whom Charles Graburn never thought of except as an object to turn into ridicule. When he made his will, therefore, previously to leaving England, he was very much puzzled to know who should be his heir. "It is but little," said he to himself; "but, little or much, Nicholas Shipswood shall not have it. Ass!" He reflected for a long time, and at last determined.

He had on his table a little book containing "Directions for making a Will;" otherwise, if he had been obliged to consult a lawyer, he never would have had courage to do as he did. There was a young lady with whom he had danced all his last leave in London; whenever he could, he had ridden beside her in the Park; and at last he had observed that when she caught sight of him in the doorway, the colour blushed over her pretty face, and that in the open air in the Park her eyes welcomed him before her father or her brother perceived his approach. Then the straightforward and honest Charles Graburn had gone away; for, said he to himself, "I've nothing, and she has nothing. If I had,—O, if I had, I would go to Lady Thames's ball to-night, and ask that pretty, sweet, simple, high-bred girl to be my wife. As it is—as it is—heigh-ho!"

He went away, and put her, like Harkstone Castle, out of his head as much as he could. He was all for being happy, and he could not have been happy if he had let his mind run on Florence; but her image recurred to him when he was leaving England.

"I would have given her all," said he to himself; "and she shall have it now, if I die; she can't have it otherwise." Accordingly he drew up his will in her favour, securing to her all of which he, Charles Graburn, stood in possession on that — day of —, 1854. The will was witnessed by his servant, and left in the hands of a lawyer, whom he had occasionally consulted. When Florence de Nyle saw her last-season's partner gazetted for the Crimea, and wiped away the two tears which suddenly darkened her sight, she very little thought how he had been thinking of her.

The very same day, at Harkstone Castle, as Phillis was walking after Harry Spoker, and the "pooppy" was following her, she suddenly fell down on the gravel-walk, and could not succeed in getting up again. Harry tried what he could by exhortation and rebuke, and at last ran for his mother. Mrs. Spoker ran and lifted her up, and assisted her back to the house. It was evident she had suffered a slight stroke of paralysis; an event not to be wondered at, considering the total change of habits she had undergone. The doctor was sent for, and Phillis for this time recovered. What portion of wits she had did not seem diminished by the attack, but in her health there was an evident alteration. She walked less with Harry, diminished the activity with which she had arranged her room, ate less, slept more, and liked an easy chair to sit in. It could not be doubted that this would not last very long, and the destinies of Harkstone Castle became a matter of very great interest.

"Only keep her from thinking about a will at all, my dear," said Mr. Spoker to his wife.

"Very well, Spoker," answered the lady; "but you know she can be very stubborn if she takes a thing in her head."

This was true of some things, but not of such great interests as the Harkstone property; for it might certainly be a subject of doubt whether the idea of possessing it had ever established itself in Phillis's head. But Mrs. Spoker went on deceiving herself, and fancying she believed it very possible that the strange heiress might obstinately make little Harry her heir.

"If she should make a will contrary to Captain Graburn's interests while I am her adviser," said Mr. Spoker, "I would recommend him to dispute it, and I would assist him with all the information in my power. It would be dishonourable on my part; it would be a professional discredit."

"You would not if it were your own son," suggested his wife.

"I would," said Spoker, "though it were my son's soul in my father's skin."

Mrs. Spoker argued no more; but she said to herself, "Ah well, he has not been tried yet."

Phillis lingered on. Through all the summer of 1854 she continued to live a declining life; and her interests were bounded to her physis, her port-wine, her crawl along the gravel-walk, aided at length by Mrs. Spoker's arm. All those exciting months,—when battles were fought, when brave men triumphed or perished, when the hearts at home beat fast for the fates of those abroad, when the great interests concerned absorbed for the most part smaller and personal interests,—Phillis, neither knowing nor caring about those scenes, was quite taken up with her own living or dying.

The winter saw her withdrawn into a warm room, sitting in an easy chair, too weak to rise from it; a jelly on the table, and an orange; a piece of flannel drawn over her head. The comfort and luxury she enjoyed were far more prominent in her feelings than the illness. She said very little, but wondered at her own comfortableness; and before very long Spoker heard her frequently pronounce the phrase, "You are all so kind to me."

"What is she thinking of, poor thing?" thought he. "Somebody is prompting her."

Possessed with this idea, he was more frequently in her sick-room; and by all the indirect means he knew tried to assure himself that she had made no will.

"Things change strangely, don't they, Phillis?" said he. "Who would have thought of seeing you here in old Mr. Chinaway's place? yet here you are."

"And they say I shall lie inside the church, by the side of him, when I die," said Phillis.

"O, we must not talk of dying," said old Spoker. "No fear of dying this time."

"I be not afraid. Better die whilst I am well off."

"Nay, there's no chance of change, is there?" said Spoker. "Live as long as you will, you will always have this warm room and this easy chair and this fine place,—hey?"

"Don't know; it's queer to be here."

"When you are gone," said he,—and we all *must* go some time,—somebody will be here in your place. Do you think so?"

"You may sit yourself."

"I? O no, on no account. What made you think of it?"

"It's very comfortable," said Phillis; "I did but think you loved an easy chair. Harry loves it when I'm not in."

"O yes, yes, the chair, of course, the chair. So you'll leave Harry the easy chair."

"Do you mean like mother left me the box with money, when she was dead?"

"Well, yes."

"That's a thing I'd fain know," said Phillis. "A paper was the way mother gave me the box, wasn't it?"

"I dare say it was; but it is a bad thing to write when people don't well know how. I sincerely advise you never to write."

"Nay, but there are some say I ought to write. I don't say who, because they, maybe, would be angry, and you're all desperate kind now to me."

"O no, we are not—not at all—not in the least. I beg you won't think so; and as to writing, you can't surely,—best not. You *have* not written, have you?"

"No."

"And *will* not?"

"I dunna know."

"At all events, I am the only person who knows how to write things like that which old Mrs. Many—your mother, as you call her—wrote. Now promise one thing—I am sure I am kind to you."

"I don't say not," said Phillis; "so is little Harry: they all say so."

"But Harry can't write; so promise, if there is to be any

writing, that I shall be the man to do it. Will you promise, Phillis?"

"Ay, ay; I don't think to trouble any body, perhaps," said Phillis. "You be kind, and the missus very, and little Harry, and all."

"And there's another who has been kinder to you than any one," said Mr. Spoker, "and that's Captain Graburn. All that you have comes to you through the captain."

"Noa, sir, 'twas the old master writ a paper."

"But the captain got it first, and gave it all to you."

"What for did he? for I don't know what captain you do mean."

"Not know Captain Graburn?"

"Noa. I dunna know, I'm sure."

"O, Phillis, you surely must know the gentleman who came to you, and told you that you had money and the castle, and all."

"I do remember something of a fine gentleman, with hairs in his mouth, that came when mother lay dead, and made jokes at me."

"Alas," said Spoker to himself, "what a trick for that jado Fortune to play him!" Then he added aloud, "Well, well, Phillis, I'm sure you'll keep in mind what a friend to you I have been, and will promise to let me do your writing."

"Ay, ay, ay," said Phillis stupidly; and turned her attention entirely to sucking an orange.

Time went on, and each portion of it was marked to most minds in England. The days of that year were photographed as they passed beneath the sun; they did not rise to be forgotten at their set; their images became permanent as they went by.

Those who thought least of the heroic deeds and stoutly supported sufferings of that time were the heroes of the deeds themselves. Their simple valour, their good sense, their careful carelessness of standing an hour under the enemy's fire, their matter-of-fact purchase of a sausage, their patience under the privation of rations of all kinds, their parade-canter to the charge of Balaklava, their nightly cigar behind the bulwarks of the trenches, were unlike most of the big words and flashing looks which came from swollen hearts and eyes about them in England. The patient valour of the men, who "rarely despond, and never despair," is like a trumpet to the souls of those who read of it; but the trumpet itself is unmoved impassible metal.

For instance,—and we all have instances,—there were Charles Graburn and his friend Frederick Palliser; the same who was playing at chess with him in Birmingham when he got the first news of his succession to Harkstone. They were in the tent which they had agreed to occupy in common, leaving the other which belonged to them to their servants and kitchen, and they were enjoying one hour of the day. Nearly every body has to look forward to one as more comfortable than the rest of the twenty-four. They had lain down on their beds, and had heaped over themselves several old horse-cloths, which they had purchased one time or other at officers' sales (thus they obtained the blessing of warmth); young Palliser also, the day before, had been down to Balaklava, and brought up a pot-bellied Dutch cheese and several onions, and had stopped at the best brush he met with, and cut away a good bundle, which he had brought into camp amid much ironical cheering. It was his turn, however, now to laugh; for his servant had added it to the scanty allowance of firewood made for cooking, and had boiled some strong black coffee, a good cup of which was being sipped smoking hot by both young men. As if to complete their comfort, an orderly came to the tent from the head-quarters of their division with the long-expected post from England, and, among others, gave one to Charles Graburn. His companion received more. Few men had left behind so small a number of correspondents in England to give and take the news as our hero. They were at once deeply engaged in their packets. The one addressed to Charles Graburn ran as follows:

"Harkstone Castle, 3d December.

DEAR SIR,—I regret to inform you that Miss Chinaway departed this life, in hopes of a better, yesterday evening at 11.45, *without a will*. By these fortunate circumstances you become sole and indisputable possessor of Harkstone Castle and all its appurtenances; and as I had the pleasure to prevail on her, at the last solemn moments, to let me put in the fire a will which she herself, in extraordinary characters and grammar, had laboriously penned, I think myself doubly entitled to offer you the congratulations which I once before too hastily tendered. Nothing now remains but to come home as soon as possible, and exchange your sword for a ploughshare.

Dear sir, for self and partner,

Yours most faithfully,

PETER SPOKER."

Charles Graburn read this letter twice, and then looked up to catch his friend's sympathy. But Frederick Palliser was buried in his own letters. His earnest face promised no sympathy for Charles, and he waited till his friend should have leisure to hear him. His own thoughts meantime were all in tumult. Rich again, lord of that strange old place, able to indulge in all those plans which had tried often to tempt his imagination, at the same time likely enough to be deprived of all by a bullet or a bayonet; for the first time he thought of the dangers of war. He read the letter again; he blessed old Spoker; he wondered what the old heiress had written; he remembered the first time he had been declared heir of the castle, and again he looked for an auditor. Frederick Palliser was folding up a letter, and deeply pondering on the contents; but Charles would wait no longer.

"Frederick," said he, "do you remember the time in Birmingham—"

At this moment a sudden blast of the bugles of their own division sounded the turn-out. Up sprang both the officers, snatching their swords from the bedsides, and in the same moment bolting the remainder of the coffee and thrusting their letters into their pockets.

"I thought that infernal row must mean something," said Palliser, as they sprang out of the tent. "They've been at it stoutly, but I hoped it was only the French lines."

"I was afraid it was on our right," said Charles; "but we were too comfortable to move without occasion."

These words were said in the few moments before the apparatus of war was made ready to and by their hands; and in the changing of a scene they were engaged in supporting the defence of their division against the sortie which had been made by a strong body of Russians upon it. The enemy's screech, the cheers of the English, the alarm sung out by the bugles, the cracking of musketry, the blaze of murderous fire that far round illumined the place,—all made up a scene that told on the spirits and hearts of those engaged. Some it animated to madness; and when the enemy at last gave way, and the impetus of pursuit began, the party commanded by our two heroes (unluckily for themselves) carried it too far, and found themselves before long beyond their own lines, and in over-close neighbourhood of the Russian supports, which enabled the fugitives to rally, and turned the tide again against those who were but now conquerors. There was nothing to do but to retreat. Far behind, the note of the English bugles was heard sounding the "cease firing;" but that was not the call that suited the affairs of this too-forward party. Gradually drawing back, the men alternately fired and retreated, their officers nearest the enemy, and preserving with great coolness their own and their men's presence of mind and steadiness. But the numbers that were opposed to them increased; and at last, a dash being made by their whole body, the English were broken, and fled back to their lines. Charles Graburn would fain have fled too; but before he knew that he was not running he was lying insensible on the ground, struck by one ball through the neck, and another on the hip. His last act of consciousness was to grapple a great thistle, and find energetic fault with it for pricking his hands. After that, battle, Russians, home, Harkstone Castle, flight, pur-

suit,—all were nothing to him for a space; he knew not how long the space, nor what were the events passing, till at last pain returned, and consciousness, and by degrees the knowledge of his situation. It was dark night still, though to the east the crags loomed out of the obscurity where the day was sending forth on the blackness its first obscure dull brown. The earth around was almost hidden, but he could perceive a few great stones and some stumps of brush, and at last a lump, which bore the proportions of a man, lying moderately near. "It's poor Fred, probably," thought he; "we were close when I fell;" and with extreme difficulty he dragged himself near to the prostrate man, and could then discern that he was alive by an occasional movement.

"Is it you, Fred?" he gulped out, scarcely able to speak for his neck-wound. "You are alive, then?"

"Yes; but I think I've enough. And you?"

"Bad enough; I can scarcely stir. But, Fred, I've something to do before I die, if I am to die. Do you remember what I was saying to you when the bugles sounded?"

"Not the least."

"What do you think? I've inherited Harkstone Castle."

"Odd enough," said Frederick.

"And I want to leave it *away* from Nicholas, and to Florence."

"You are wandering, poor Charley."

"No, no; I've all my wits, and also the blank side of Spoker's letter. I'll contrive to scrawl it, if you'll contrive to sign."

"Go on," said Fred.

Charles Graburn, thus encouraged, took from his pocket the letter, which was dyed and wet with his blood, and, as far as he could discern the black mark of his pencil on that part of the paper which continued white, wrote, "I leave my whole property to Florence de Nyle." Frederick grasped the pencil, and with infinite difficulty subscribed his name. Charles Graburn's spirits rose with the excitement.

"But there should be two witnesses by rights," said he. "If it's not perfectly good, old Nick will come down upon it."

"I don't know where you'll get another," said Fred. "A Russian is the only chance; and the first daylight will bring plunderers, who are more likely to bayonet us than to sign your will."

"True enough; can't you crawl away, Fred?"

"Not I; I'm shot through both thighs; I am motionless."

Both were silent; they bore their pain gallantly. They endured stoutly the ideas which could not but press on them,—of the enemy, against whom they were helpless. All was still for another quarter of an hour; then the earth vibrated beneath their prostrate forms, and directly after the sound of horses' feet, approaching at a trot, made itself heard. It was a Russian party, as appeared by the tone of their speech, but in the darkness they did not perceive the wounded soldiers, and they passed on. They were followed at a short distance by an officer of their own, who deviated a little from the track of his party, and passed near the young men. Charles's thoughts were very much carried out of his situation by his momentary possessions. As the officer came near, he lifted up his arm, and at the same time called to him, in French, "*Une grâce, monsieur.*"

"*Ne craignez rien, monsieur,*" said the officer.

"*Craindre!*" cried Charles; "*il ne s'agit pas de cela. De grâce, monsieur. Sous-signes cet écrit.*"

"*Comment, mon nom?*" said the officer, who could hardly be said to have paused.

"*Mais oui, monsieur, mais oui! c'est mon testament.*"

"*Ah, monsieur,*" said the Russian, hastily jumping off his horse, and doing as he was asked, and on again in a second.

"*Ivan Iliashensko,*" said Charles, reading the characters with straining eyes. "*Au revoir, Monsieur Iliashensko, au Château Harkstone, comté Dorset.*"

The officer was gone while the words were saying, but

he heard them, and touched his cap, half-laughing, as he started after his men.

"Who knows, Fred," said Charles, his spirits quite elated, low as he lay there,—"*who knows* but you and I, and that fellow, shall be by the Christmas fire at Harkstone yet?"

"Not I," said Frederick. "If you ever get back, take my love to poor Alice."

"I will, I will," said Charles; and, after a pause, he broke out again, "And, Fred, if you *do* come, bring Alice with you."

"All right," said Frederick, not able nor willing to dispute about probabilities.

The daylight meantime grew clearer, and they could see several of their own men lying motionless on the stony earth. At a distance, too, it seemed as if a figure moved in the dim twilight, stooping at each prostrate body it came to, and after a few seconds again advancing. Charles Graburn grasped the sword which still lay by his side.

"I'll not die like a dog, without striking a blow," thought he; but a moment after, he relaxed his hold, and cried aloud, "He's our own! Soldier, come hither!"

The figure turned at the voice, and approached at a run; but the same exclamation which had caught his attention excited that also of four gray-coated figures, which had been partly hidden by inequalities in the ground, partly by the mist of the wintry morning. They were nearest, and sprang at once upon the two officers. "*Plennik! Prisonnier!*" said both; but their Russ and French were alike unheeded by the men, who tore away in a moment the ornaments of their dress, while one of the four, with the dismounted bayonet he held, lifted his arm, about to strike. In a moment more the English soldier whom Graburn had observed was up with them, and the pistol he held in his hand had whizzed its ball through the head of the bayonet-armed Russian. The other three fell upon him; but he had snatched up Charles's sword, and stoutly defending and attacking, cut through the arm of another; and the remaining two, having neither time nor reason for persevering in the plunder of two defended men while plenty were lying undefended, turned sullenly away.

"Brave Weight!" cried Charles; "you've saved us."

"Ay, sir; I got leave to come and look for you; but there's more coming. I hope ours will be first."

"Do you see them? Are they coming?" cried both the young men.

"Yes, sir; both sides. I hope ours will be first. Captain Graham sent down ten of his troop to try and bring you two gentlemen off. There they are; but there's lots of the enemy."

"Will they be in time?"

"Well, I think so," said Weight, reloading his pistol.

"I feel them on all sides," said Frederick; for his torn nerves vibrated to sound and motion.

"Ay, sir," said Weight, looking first right then left.

The English soldiers were urging their horses over the rough dangerous ground; Weight's arm was lifted high to point out the place they had to make for, and then they dashed towards it. They came up in time; four sprang to the earth, and lifted the prostrate men. No care, no gentleness for their agonised limbs could there be. They raised them on the horses, and into the grasp of two of their comrades. Weight sprang behind another of the men, and they galloped away.

Did any one ever break a limb, and know what it was to be moved? Think of that gallop!

But they were saved; the dragoons carried the two officers within the lines, and up to the camp. There they were laid down and attended to. Frederick had fainted; Captain Graburn retained consciousness of his agony.

But they did not die; they lay in the hospital, and life returned to both. They were sent home as soon as they could be moved; and before they were well enough to think of returning to their duties peace had been made. Christmas of 1856 arrived, and the scene it presented at Harkstone

Castle was nearly as Charles Graburn had said it would be, but better still. The bright fire was burning in the castle dining-room; and at the abundant Christmas-board sat Frederick and his dear happy Alice; honest and excellent Spoker, and his wife, resplendent in a diamond-cross and earrings,—Charles's present. There was no Iliashensko, indeed; but instead of him, at the head of the table sat that fair Florence who had been made mistress of the castle on the bloody Chersonese, and who sate there mistress, not of that only, but of the warm glad heart which had so nearly ceased to beat when he remembered her; and thinking to see her no more, "with all his worldly goods did her endow."

The gift had been confirmed in her own village-church as soon as Charles could walk with her to the holy table. She had loved him poor, and he knew it; riches were wanted only to give the two a home in common; and it was now a month since they had enjoyed it together. Charles's sense of Mr. Spoker's honourable conduct was expressed in ways more profitable than the sparkling present to his wife; and as for Sergeant Weight, he sate in the housekeeper's room the most honoured of guests, and every body thanked him and praised him for having saved Charles Graburn's life, except Florence; but she, often as she took his hand in hers and began to speak, broke down for want of voice, and could do nothing but look him in the face, her eyes overflowing with tears.

THE ORPHANS.

By HAMON.

THE shadow of death has fallen over this little household, and even yet the inmates are chilled into melancholy during its passing-by. The gravor of the orphans, strengthened by trouble, has, however, risen against pain, and struggled with it only to overcome; and, the first shock past, all has settled into quietness, a little saddened by grief. The elder sister pursues home vocations; and the younger, less firm in heart, or overcome with lassitude, has fallen asleep over her work, forgetting sorrow and pain for a while; the little one, with childish thoughtlessness, attempts to arouse her with the stalk of a tall flower taken from the vase on the table, abandoning his own toys for the delight of teasing his sister. Over his young heart no change has come. We think these few words have told the tale.

As a work of art this picture is not a little interesting, being an example of the modern French classical style resulting from the pseudo-antique studies so much practised by the school of David. The reader will observe this in the extreme simplicity of the composition, almost bare as it is, and in the severe forms of the draperies, which, although modern in construction, are thoroughly classic in design and arrangement; the very attitudes of the figures, with the reserve of motion about them, is strikingly exemplificatory of it. It is remarkable how this is carried through the whole work, even in the simple character of the accessories; in fact, the woodcut before us might almost be an engraving from some recovered work of late Grecian art just discovered at Pompeii, rather than a picture by a French artist exhibited at Paris in 1855.

L. L.

A NEAR CUT TO INDIA.*

THE establishment of "near cuts" may be said to be the great aim of modern times. Machinery has established near cuts between the raw material and the manufactured article; and the purpose of every new invention in art, and the effect of almost every fresh discovery in science, is to shorten the road by which we travel to the goal of our objects and

desires. Many near cuts of this kind have been discovered during the present century, of which railways and the electric telegraph may be mentioned as the most remarkable. By the former, a place at the distance of fifty miles may be reached in one hour instead of in six; by the latter, time and distance have been annihilated altogether. The grand scheme which forms the subject of this paper is the establishment of a "near cut to India" by making a canal through the Isthmus of Suez; and if the reader will consult a map of the world, he will perceive at a glance the great saving of distance and time which it will effect. Let him run his eye, say from Southampton, down the coast of Europe, and away round the immense continent of Africa to the Cape of Good Hope, and from thence up the Indian Ocean to Calcutta; and then compare that long circuitous route with the proposed line of passage along the Mediterranean, through the Isthmus of Suez, down the Red Sea, and across the entrance to the Persian Gulf. Reducing the matter to figures, the distance by the Cape route from London to Bombay is 5950 leagues; by Suez it will be 3100 leagues—a saving of 2850 leagues.

Until the year 1823, the only road to India was by way of the Cape. The lumbering Indiamen in which the voyage was made called and took in provisions at St. Helena, at the Cape, and half a dozen other harbours besides. People in England who had friends in India believed they kept up intercourse with them if they heard from them once a-year; for a letter written in September of the one year was answered possibly by October in the next, when the thoughts, the feelings, and the circumstances of the writers were altered, if not forgotten, by themselves. The news of Indian battles reached the government at home and the friends of those engaged at a time when the success which was the cause of national rejoicing had possibly been followed by reverses. Events in India were altogether beyond the control of the government at home. Our Indian Empire might be lost and won long before the ship which carried the intelligence sighted the coasts of Europe. Commerce, too, was subjected to all the thousand vicissitudes of time and distance. No advices from the Indian markets could reach the London houses under five or six months from the date of the letter. Speculation and trade were consequently extremely dangerous; and this fact tended to limit commercial transactions with India, and to check the development of its resources. These disadvantages were all painfully felt at home, but they were still more painfully felt by the European Indians themselves. About the year 1823 the idea of a "near cut" first began to occupy the minds of the leading men of Bombay. In casting about how this much-desired object might be accomplished, it occurred to them that the run from Bombay to Aden, at the point where the Red Sea opens into the Indian Ocean, was hardly one-fourth of the length of the run from Bombay to the Cape; that the Red Sea, though long, and reputed to be dangerous by the fathers of the Church and Mussulman pilgrims bound to Mecca, was, after all, neither so tedious nor so dangerous as the passage round the Cape. They further bethought themselves that a ship carrying mails and passengers might discharge its burden at Suez; that a courier and passengers might, without difficulty or danger, cross the desert which separates the Red Sea at Suez from the Mediterranean at Alexandria; that another ship waiting in the latter port might receive them on board, and carry them to Malta, and thence to England.

The Bombay government proposed all this to the home government, stating at the same time that experiments had been made, and that the whole voyage might be performed in thirty-five days. The proposal was rejected, revived, and rejected over and over again, and was only at last adopted after a lapse of twenty years. Lieutenant Waghorn's share in demonstrating the practicability of the scheme, and eventually in obtaining its adoption, was rewarded by a pension of 50*l.* a-year, granted by the government to his mother; he himself having died unrequited shortly after his plan was carried into execution! Such, in

* For the information contained in this article we are mainly indebted to a recent pamphlet, entitled *The Gates of the East*. By CHARLES LAMB KENNY, Barrister-at-Law. London: Ward and Lock.

THE ORPHANS. BY HAMON.

a few words, is the history of the establishment of the first near cut to India—the Overland Route.

The advantages of this route were immediately realised. Merchants could send or receive by it letters, specie, samples, and small parcels of goods of sufficient value to bear the heavy charges of transport. The government also could send despatches, and officers whose business was urgent; but it was not available for large cargoes of goods, nor for troops and commissariat stores, which were, and are, sent by sea round the Cape. Still a great advantage was gained as regards mail communication; and the trade with British India has enormously increased during the twelve or thirteen years that the overland route has been established. But with the increase of trade, the necessity for a more rapid and safe conveyance of goods soon began to be felt both in India and England; and a number of schemes were started for making the track of the present overland route available for all trading vessels. Captain Allen, R.N., conceived the gigantic project of flooding a portion of Syria by letting the waters of the Red Sea and the Mediterranean in upon the lower level of the Dead Sea and the Sea of Galilee, converting part of a continent into an ocean. Another scheme proposed to make a canal, which should cross the Nile by means of a gigantic aqueduct. But these, if not impracticable, were at least too difficult of execution. A plan, however, is now before the world, the execution of which is stated by the highest engineering authorities to be within the limits of our scientific and commercial resources,—a plan which can be carried out within a reasonable time, and at an expense that has frequently been equalled, and in some cases exceeded, in the construction of railways. This plan is to join the Mediterranean and the Red Sea at the point where the narrowest strip of land interposes between them; to carry, in fact, a ship-canal through the isthmus from Suez to Pelusium. The

project for this canal was conceived by M. Ferdinand de Lesseps, who, in October 1854, visited Egypt in consequence of an invitation from the new viceroy, Mohammed Saïd; and in the course of a journey across the Lybian desert from Alexandria to Cairo, the question of cutting through the isthmus was first mentioned between them. The prince requested M. de Lesseps to draw up a memorial on the subject; and this being done, and meeting with his approbation, he issued to the consuls-general of foreign powers a firman, destined to receive the sanction of the sultan, granting to a company composed of the capitalists of all nations the right to construct a canal between the two seas. At the same time the viceroy ordered his two engineers, Linant Bey and Moguel Bey to accompany M. de Lesseps in an exploring expedition to the Isthmus of Suez, and to complete, by a fresh examination of the ground, the investigations already made. The report of the engineers was most favourable to the scheme.

M. de Lesseps' next step was to proceed to Constantinople. There he had an audience of the sultan, and eventually obtained a letter from the Grand Vizier to the Viceroy of Egypt, in which the plan was described as "a work of the most useful and interesting character." While at Constantinople M. de Lesseps addressed Lord Stratford de Redcliffe on the subject, but did not meet with any encouragement in that quarter. In 1855 M. de Lesseps came to England to explain his scheme to our leading politicians, and the information which he then gave has since been published in a pamphlet.*

At the close of 1855, a commission was appointed, at the desire of the Viceroy of Egypt, to examine and test the accuracy of the report of his own engineers; and for this purpose M. de Lesseps got together a body of the most

* *Isthmus of Suez Question.* By M. FERDINAND DE LESSEPS, Minister-Plénipotentiaire. London: Longman and Co. 1855.

eminent engineers in Europe. England was represented by Messrs. Rendell, M'Clean, and Charles Manby; Austria, by M. de Negrelli, Inspector-General of Railways; Sardinia, by M. Paleocapa, Minister of Public Works; Holland, by M. Conrad, Engineer-in-Chief of the Water Staat; Prussia, by M. Lentze; Spain, by M. Montesino, Director-General of Public Works; and France, by M. Renard, Inspector-General and Member of the Council of Ponts et Chaussées, and M. Lieussou, Hydrographer and Engineer to the Imperial Navy. The department of nautical science was represented by Captain Harris, of the East India Company's Service, and by Rear-Admiral de Genouilly and Captain Jaurès, of the Imperial French Navy. This commission proceeded to Alexandria; and their examination of all the points connected with the proposed undertaking resulted in a full confirmation of the previous report. The commissioners stated,—we quote their words,—“That the execution of the ship-canal was easy, and its success certain; and that the two harbours to be constructed at Suez and Pelusium presented none but the usual difficulties.”

The question from an engineering point of view having been thus fully solved, the Viceroy of Egypt granted to M. de Lesseps a second charter, declaring the burdens, obligations, and services to which the proprietors of the Suez Canal will be subjected; the concessions, immunities, and advantages to which they will be entitled, and the facilities which will be accorded to them. The following is an abstract of the terms. The works to be executed are: 1. A canal wide enough for the passage of the largest vessels between Suez and Pelusium. 2. A canal of irrigation and supply striking out of the preceding canal in the directions respectively of Suez and Pelusium. These works shall be completed within six years. Lake Timahah shall be converted into an inland harbour fit for vessels of the highest tonnage. A harbour of refuge shall be constructed at the entrance of the ship-canal into the Gulf of Pelusium, and the necessary improvements shall be made in the port and roadstead of Suez. The Egyptian Government shall have a claim of fifteen per cent on the net profits of every year. In return, the Egyptian Government agrees to make the following concessions: 1. A free grant of all land, not the property of individuals, which may be found necessary for the purpose of the works, and the use and enjoyment of all waste lands which shall be cultivated by the means and at the expense of the canal proprietors. 2. The privilege of drawing from the mines and quarries of the state free of charge all necessary materials for the construction and maintenance of the works and buildings. 3. Free importation of the machinery, &c. to be used in the construction of the works. It is further provided that the canal shall always remain open as a neutral passage to every merchant-ship; that for the right of passage through the canal the maximum toll shall be ten francs per ton on ships, and per head on passengers; and that the provisions of the charter shall be in force for ninety-nine years after the opening of the canal.

Now as to the estimated cost. It appears from an estimate prepared by Moguel Bey and Linant Bey, and examined and approved by the international commission of engineers, that the total expense of all the works, including all contingent expenses, will amount to 8,000,000*l.* The actual cost of the canal itself will, it is stated, be only 5,754,063*l.*; the difference between that and the whole sum will be necessary for works in connection with it, such as the excavation of harbours and the fixing of the sands. This seems by no means an extravagant sum, considering the magnitude and importance of the undertaking; comparing it, indeed, with the sums spent in recent railway enterprises, it will appear exceedingly moderate: the railway from London to York cost nearly one-third more; that between Paris and Lyons also about one-third more. With regard to the paying capabilities of the proposed canal, it has been estimated that the tonnage likely to pass through it will not be less than 3,000,000 tons per annum, without taking

into account the increase of trade which it may be expected to produce. This amount of tonnage, at ten francs a ton, would give a revenue of 30,000,000 francs, or 1,200,000*l.* But if only half this sum, viz. 600,000*l.*, be realised, it will return 7½ per cent on the capital.

Finally, France, Austria, Sardinia, Spain, Greece, and Turkey take a deep interest in the scheme, and are anxious to give their assistance in carrying it out; and nearly two-thirds of the required capital have been subscribed. What, then, is wanting? The consent of England. Although Turkey stands among the first promoters of the scheme, she has not yet given her formal consent to its execution, in deference to the British government. It is pretended by our government that the scheme is impracticable; and in this assertion it has been backed up by a very eminent engineer, Mr. Robert Stephenson. But it must be observed, that Mr. Stephenson singly pits his opinion, upon a very slight acquaintance with the subject, against the deliberate judgment of some nine or ten of the most eminent engineers in Europe, after a thorough investigation. The real objection, if there be any beyond the usual obstructive policy with regard to all new schemes, must be political, and based on the fear of opening the way to India to other nations; but surely, as the increased facility will be shared by ourselves, this objection, so derogatory to our much vaunted maritime superiority, cannot be allowed long to stand in the way of an enterprise so grand in itself, and so important to the interests of our commerce, and to the development of the resources and consequent civilisation of the inhabitants of India.

EXHIBITION OF DESIGNS FOR THE WELLINGTON MONUMENT.

WESTMINSTER HALL.

AN occasion so entirely novel in England as this, of an exhibition of works of sculpture sent in competition for the prize of executing a national monument, is peculiarly interesting, as each visitor becomes as it were a voter, called upon to deposit the number of his favourite design in the ballot-box of public opinion. In forming a judgment to this end, it will be well for the spectator to ask himself if a work which may attract him really fulfils its purpose as a memorial of the great Duke, and is worthy of so noble a destiny as to become a testimony from a great nation to one of her greatest soldiers. Consideration of this point will speedily reduce the subjects for judgment to a very small number,—even two or three. We have first of all to reject all such as are absurd in design, being from their very nature not only unfit for the special object, but totally inadmissible for monumental sculpture on any occasion whatever. At the head of these we shall place No. 1, “The Wellington Star Monument,” as it is somewhat fantastically entitled. This consists of a twisted column of marble, rising from a base surrounded with eight other twisted columns, and surmounted by a statue of the Duke. Now this is absolutely unfit for monumental sculpture under any circumstances, being merely a memorial, and from its form suitable enough for a column in a public square (if it were not for the singular hideousness of the design), but most unfit to be placed over the grave of the great man commemorated, and also by the predominance of vertical lines unsuitable for a place within a building.

Another great quality—indeed the great quality—to be looked for in such designs is, that of idea; that is to say, something which shall show the sculptor has been penetrated with an appropriate thought on the subject, suggestive or expressive of the feeling with which one should look upon a work so dedicated. “The Wellington Star Monument” possesses just this infinitesimal atom of a thought adaptable to the purpose,—it has, and derives its name from, a gilt star on each of the four faces of the capital of the column; so that a person approaching could not but be

struck with the appropriateness of such a thing glittering in the sun, and surmounting a monument to him who was the "star of England" through so many decades. It will be needless to add, that this No. 1 is not unique as an example of the way in which the absurd and ugly predominate over the fitting and the beautiful; we are compelled, however, to select an instance upon which to enforce our remarks.

Having disposed of the absurd works, the reader will next proceed to decide upon such as are conventional and mediocre,—not ridiculous, but simply dull; amongst which we may place all such as rely upon that noble quadruped the British lion for the chief exponent of their meaning; all those whose authors lack means of expressing themselves but with the aid of figures of Britannia, Victory, Fame, Valour, Peace, &c.,—excellent personages in themselves, but, as ideas in sculpture, long ago worn threadbare and repeated to loathing. Natural and true grief does not vent itself in rhetorical figures and tropes, neither does an artist who has any new thing to say express himself mainly by these stilted and inane conventionalities.

Fame with her trumpet, the Muse of History inscribing his deeds, Britannia crowning her hero with laurel, Palm-bearing Peace, and Victory with the wreath, are of course the pet reliance of sculptors whose idea is rather to make a design which shall comply with and illustrate certain conventional rules of the abstract science of composition (so-called), than to produce such a work as we have said is now required.

No reader will give his vote to a work which depends for its interest upon such auxiliaries, if he will cross the road between Westminster Hall and the Abbey, and note how the latter (noble Gothic temple as it is) has been defaced by legions of Britannias, Virtues, Victories, Heroes, Lions, and Wreaths. He will there see how often the British lion has been employed to guard a grave,—how often that poor brute's haunches have been loaded with a sarcophagus,—how often Victory has crowned the Hero, and what scores of lugubrious Britannias weep above the tombs.

Let us entreat the reader to dismiss from his mind and recollection these poor horrors, and resolve that unless an allegorical figure is intruded for some other than its conventional value as representing an abstract quality, it shall on that account be rejected, excepting, indeed, it has an interest of its own, and displays a real feeling and purpose on the part of the sculptor. With such a condition, even Britannia may be endured, nay, perhaps admired, and the British lion not requested to weep or roar elsewhere. All depends upon the sculptor's feeling for the subject.

Thus examined, it appears to us that the whole series of designs (eighty-three in number) may very summarily be reduced to three only which fulfil the conditions of originality, feeling, and excellence required. These are Nos. 78, 36, and 34. Of these we have placed first that which seems most excellent, most simple, and most suitable,—No. 78,—with the motto, "Deeds, not words." This is, in our judgment, the only work thoroughly fitting and good. Under a low canopy of simplest unornamented design reclines upon a sarcophagus the statue of the Duke; upon the platform constituted by the top of the canopy kneels a figure of Victory just alighted to place a wreath, as the only decoration of the monument. The supreme simplicity of this design is not destroyed by the presence of four angle-figures of Truth, Valour, Duty, and Loyalty. If the reader wishes for an example of the way in which true feeling for a subject may be evinced by one man when dealing with the same materials, which serve only to encumber another, he will compare the design of these figures with similar ones in the Hall, bearing in mind our previous remarks on the hackneyed nature of allegorical figures in general. It is necessary in placing a monument in a building like St. Paul's that it should harmonise with the architecture surrounding, and that it should not be of such height as to

dwarf the altitude of the aisles, thereby injuring the architectural effect of the latter without giving any compensation for such a solecism. The horizontal forms of this design will therefore be eminently fitted for a position in the cathedral.

In an architectural sense, No. 34 undoubtedly transcends all others here. It is, however, Gothic in design, and mainly vertical in arrangement of composition; therefore, although admirably suitable for a public square, is quite inadmissible in a building of Wren architecture, and, indeed, for an interior at all. It consists of a lofty Gothic tomb, designed with great knowledge and taste, being simple, strong, and pure; beneath the arch of the tomb is a sarcophagus, and upon its base are many *bassi-relievi* of appropriate subjects; upon the apex of the arch or canopy is a statue of the Duke. To this sort of double presence of sarcophagus and statue,—at least when the latter represents life, and is not recumbent on the top of the chest,—we most strongly object; a tomb cannot combine the qualities of a memorial and a monument in itself. We take these words arbitrarily to signify, in the first case, a cenotaph or erection in honour of one whose body does not lie beneath; and in the latter, applying it strictly to a tomb over the body of the person honoured. These qualities seem to us repugnant and incongruous, and the attempt to combine them in one a certain failure. Another and obvious objection to this sort of duality is, that it suggests an absurd fancy of the statue being a representation of the ghost of the deceased which has risen from the coffin beneath. We contend, therefore, that the simply grand and awful idea of death is disturbed by the confusing or duplication of two distinct thoughts one with the other. The sculptor's motto for this work is, *Rem magni animi agerum*.

Although somewhat melodramatic in conception, there is a great deal of feeling in the design of the last monument we have to refer to, No. 36. This has the advantage also of being peculiarly adapted to the vein of thought which for some two hundred years has been judged most appropriate to art when employed on such a task as the present: therefore it will, beyond question, be the most popular of the designs here exhibited, and, if the voice of the people conferred the prize, undoubtedly the one chosen for execution. It consists of a lofty tomb, of simple classical form, surmounted by a statue of the Duke, and having on either side a double gate of wrought bronze, whereupon are carved medallion subjects from the events of his life. One of these gates is closed; by the side of the other stands an angel, with his left hand to his lips motioning silence, while with the right he closes the remaining valve of the gate. The motto is, "Past away," which expresses the feeling and action of the angel. The Muse of History and a British lion are accessories.

These three are the only works which seem to us to display sufficient talent to merit the reward (of course, after excluding such as are quite inadmissible from the peculiar circumstances of the case, amongst which we might name several that are extremely beautiful in themselves); however, the second is unsuitable, on account of the Gothic nature of the design, and we ourselves would much prefer the first to the third, not only for its superior merits as a work of art, but as being of a higher order of taste.

Baron Marochetti's great design is yet invisible, he, not complying with the conditions laid down (and binding upon others), reserves it in his study. Why he should not condescend to exhibit his work (if it really is not here) we cannot comprehend, as, all national prejudices aside, we think him likely to produce a very remarkable work. What is to be regretted about this circumstance is, that many of our best sculptors refused to compete, under the impression that the commission is already disposed of, and that the prizes are awarded without consideration of after-execution of the monument. In fact, it is reported that the Sardinian nobleman is to carve the tomb of the English Duke.

A FRENCH HOLIDAY.

At six o'clock on the 15th of August 1856, the worthy inhabitants of the various cities of France were awakened from their slumbers by the unwonted sound of cannon. The boom of from twenty to a hundred salvos of artillery (according to the size of each place) announced to the nation the fête-day of their sovereign, and the arrival of a national holiday.

When the roll of the guns reached my own ears on that morning, it had travelled some mile or two across the sea. The steamboat upon which I was had left Le Havre at half-past five, and was steadily working out across the bay. It was a charming morning for an excursion to sea; the sky had that peculiar gray mackerel-tint, and the air that freshness and purity about it, that give a good promise of fair weather and clear skies. Looking inshore, and eastwards, the broad mouth of the river, dotted here and there with a white sail, and one solitary steamer,—bound, according to the bills, upon a "grande promenade" to Rouen,—had caught a glow of unaccustomed beauty from the chastened sunlight; and even the unsightly roofs of dirty Havre, set sharply against the bright sky, looked their very best. Far away on the left my eyes rested upon Ste. Adresse, with its lighthouse, its cliffs, and its picturesque valley of thick foliage and summer-built houses, dear to me besides as being my home; while on the right lay fashionable Trouville, almost concealed in the shadow of its hills, standing behind, between it and the morning.

The destination of the author and his steamboat, thus romantically introduced to the reader, was that city of mediæval association, and miraculous feminine head-gear,—Caen. As the well-informed or travelled Englishman will be aware, it lies at the head-quarters of the river Orne, a curious stream (if stream it may be called), constructed by the combination and the docking-up of various little rivulets at one end, and assisted at the other end by the sea, which fills the channel at high tide, and enables vessels of small burden to pass to the docks and quays of the town. A place of considerable merchandise is Caen; the centre of a fine agricultural country, and the *locus* of several manufactures; a city full of interest for the lovers of old times, crammed with *recherché* specimens of architecture, thronged with the oval-faced and bright-coloured beauties of Normandy, in their artistically delightful costume of sabots, short petticoats, and lace caps; endowed with a magnificent lyceum, or semi-university; surrounded by the rich and comfortable fields of an undulating and pleasing country; and (for a French town) marvellously clean.

No wonder, then, if, with all these ordinary attractions, and with the extraordinary one of a promised regatta in the "basin," or largest dock, the old Norman town should have enticed me to spend a summer-day within its walls. On the other hand, there was nothing to keep me at home. My own quiet village was to be invaded by the horrors of a French fair. Opposite my very garden-gate were already established two proprietors of rival lotteries, one for gingerbread and the other for crockery; and the constant whirr and click of the lottery-machines, combined with the shrill voice of the seductive proprietors, and the still shriller voices of the infallibly losing public, filled me with prospective apprehension. Was I not aware, too, that the *restaurateur* from whom I ordinarily obtained my modest repasts would infallibly, upon this exciting day, forget even the existence of his quiet customer opposite, and upon the morrow tell so many falsehoods to exculpate himself as would make me quite uncomfortable; that Héloïse, the pretty *bonne* of the establishment, had made an engagement for the day with her mother the *blanchisseuse*, her sister the vegetable-merchant, and Robert the mason, whose connection with Héloïse was not yet defined; and that madame, my landlady, had made arrangements for a grand spectacle of fireworks in the garden, of which my chamber commanded so good a view,

that it would be almost cruelty to deprive the good lady and her friends of the use of it? Expatriation for the day was, I felt, the only resource; and so it came about, that when the guns fired their welcome to the emperor's fête-day I was steaming along to Caen.

By the time the smoke had cleared off from the battery-quay in the distance, the party at the extreme aft of the vessel, where I had stationed myself, had made each other's acquaintance pretty perfectly. The sudden burst of the first gun had startled us into simultaneous exclamations, and mutual remarks upon the subject, of no particular tendency, but sufficient to break the ice—never very thick in France—of our ignorance of each other. After that we engaged in very pleasant conversation,—the fineness of the weather, the prospect of a good regatta, Prince Jerome's arrival at Frascati's, the comparative merits of the sandy shore at Trouville and the shingly one on the other side of the bay, with all those little nothings which Frenchmen and French women adorn with so much of conversational briskness. As the shore receded, our eyes bent more and more on each other; and at last we formed, if not a very wise, at any rate a very chatty and happy little party.

Even in the stormiest weather there is scarcely enough sea between the mouths of the Seine and the Orne to try the sailing capacities of passengers; and as the reader already knows that the morning of our trip was remarkably fine and calm, he will not be surprised to hear that none of the unpleasantnesses usually incident to sea-voyages occurred to us. Our party was as blithe and as perfect when the spire of St. Pierre de Caen came in sight over the flat banks of the Orne as when we passed the pier-head at Havre. The respectable *bourgeois*, with whose daughter's conversation I had been solacing myself during the greater portion of the voyage, informed me that the passage had been *à merveille*, and was incited thereby to such good temper, that he invited me to join their party for the day,—an invitation I was by no means loth to accept.

With Pauline, therefore, upon my arm, and following in the wake of the respectable M. Simon, her papa, and his equally respectable partner in life, I left the steamboat, and commenced the investigation of Caenese curiosities, amidst the admiring gaze of a crowd of *gamins*, sailors, and fishermen's wives, rigged out in their best in honour of the emperor, and assembled to greet the boat-load of visitors to their native town. The whole place was evidently on its best behaviour. Flags were flying in all directions, guns going off at distracted intervals, bands of music performing a choice variety of tunes, and all the ships decked out from mast-head to deck with rows of bright streamers glancing in the sun. Close to the place of debarkation we found the scene of the intended regatta, ready for the contest. The "basin" cleared for the purpose was a large dock, some quarter of a mile long, and as broad as Portland Place. All down each side, close to the edge, were placed rows of chairs, and at the end of the dock rose a magnificent erection of wood and canvas, dedicated to the especial use of the officials and the *grandees*. M. Simon and his party contented themselves with beholding these splendours afar off, and engaging four chairs for the ceremony at the moderate price of one franc for the four. As there was no money paid in advance, and yet, when we arrived at the appointed hour, we found the four places faithfully retained, I formed a fair opinion of Caenese good faith. Matters being thus settled, the party of the reader's humble servant adjourned to a *restaurant* in the market-place, overlooked by the mediæval splendours of St. Pierre, and recommended by a fellow-passenger. Incontinently there did we feast upon,

1. A dish of stewed mussels;
2. Melon;
3. Poulet roti;
4. Salade;
5. Langue au sauce piquante;
6. Conserve d'abricot;

a meal which, washed down as it was with the usual Normandy cider, gives me even now a retrospective stomach-ache. That I survived it I now consider to be entirely the result of the mellowing influence of the society of my fair companion, upon whom, as well as upon the

elders, the cider had its proper effect. The amount of *extente cordiale* developed by the time we stepped out into the market-place would have made a Russian shudder.

But what is to be done next? The regatta commences at one o'clock, and it is now only half-past ten. Shall we begin by investigating the architectural beauties of the town? A glance at M. Simon, replete with the six dishes and the cider, is sufficient to assure me that that worthy man will be in no hurry to undertake such an expedition. Shall we, then, sit outside a *café*, and indulge in cigars and coffee? I confess that this was scarcely what I came so far to do. Well, let us call the waiter, and ask him.

The waiter understands both his business and ours. What to do? Is there not a solemn *Te Deum* to be sung at the church of St. Etienne, and will not all the high and mighty of the city be there? What to do? Has monsieur read the programme of this festive day? No; monsieur has not. Then let him (the waiter) direct monsieur's attention immediately to that important document, which monsieur will find posted up on the church-door, just outside.

The waiter's advice was as good as his breakfast; and in ten minutes after we joined the flow of people to hear the *Te Deum* at St. Etienne (St. Stephen).

A splendid building is St. Stephen's of Caen, and not only splendid but interesting. The style is pure Norman, kept zealously in repair; and the building itself is of that fine Caen stone which they bring so largely to England for similar edifices. Yet one does not look so much at the general splendour of the building as at one broad slab in the centre of the chancel-pavement, whereon is carved, "Hic sepultus est Gulielmus, Dux Normandiæ, Angliæ conqueror, hujus ecclesiæ fundator."* And there is little doubt that the great Norman really lies under that slab; for the tomb was opened in 1542, and his body found there in a state of preservation.

Yet we almost lost our glimpse of this famous tomb. Five minutes after we had made out the inscription, and I had translated it for the benefit of my fair companion, a throng of acolytes rushed into the choir, armed with chairs, benches, carpets, and cushions. Over the grave of William the Conqueror they laid a piece of green baize, and on the green baize, facing the altar, they set a great tawdry arm-chair, supported by two other arm-chairs, one on each side, and flanked by benches parallel with the chancel-walls. Then the crowd of acolytes retired, and we were left to talk to each other, and wonder what was to come next.

There was no occasion to wait long. A roll of drums, a tramp of feet, and a trumpet-call, announced the arrival of troops. The great west door opened, let in a flood of sunshine, and about 600 soldiers. Two lines of fixed bayonets were formed from the entrance to the choir-door. Then the officer in charge of the troops shouted something unintelligible (can any body ever understand a drill-officer in *any* language?), the bayonets were unfixed and fixed again, the guns grounded and shouldered, and so on, for five minutes more. Then another roll of drums outside, and a great uproar, and then a procession of all the dignitaries of Caen, from the *préfet* down to the *sergents-de-ville*, decked in all the paraphernalia of office, and headed by a tremendous military band, with the biggest drum I think I ever saw. On they came, preceded and heralded by the booms of the drum and the clang of the band, between the two lines of the fixed bayonets, clad in every possible variety of gown and vestment. Immediately behind the band walked a gentleman all gold-lace and epaulets, differing only from a gorgeous footman in having a most inconvenient sword; and immediately behind this official walked two other gentlemen, similarly gorgeous. These were evidently the candidates for the three chairs; and, surely enough, down they sat over the conqueror's grave. If he could have looked up and seen them!

But I shall never get to the regatta if I run on about

* "Here lies William Duke of Normandy, conqueror of England, and founder of this church."

the *Te Deum*; and I want to get to that, because there was a novelty or two in it, and there is very little novelty in *Te Deums*. At any rate, before the bowing and chanting, and walking backwards and forwards, and ringing of bells were over, myself and friends slipped down from the clerestory, where we were ensconced, and out into the rich sunshine, with the glow of nature's gold and the music of nature's harmonies. Then we rambled a bit out into the fields; Pauline and her companion became sentimental, while M. Simon smoked; and then we rambled down again to our four seats by the side of the basin, and prepared ourselves to view the regatta.

The board and canvas erection at the end of the basin was now filled with the same magnificos who had listened to the *Te Deum*, joined by numbers of ladies. A flight of steps led down from the front of this grand stand to the water, and a small vessel, moored in the centre of the basin just opposite to it, was evidently the winning-post. The lines of chairs were crammed with the *bourgeois*, and behind them, and on every possible elevation whence a glimpse could be caught of the proceedings, swarmed tag-rag and bobtail of Caen.

The reader need not imagine that I am going to chronicle at full and tedious length the whole of that afternoon's occupation. Regattas are much the same all the world over, and six men in a French boat pull (to unscientific eyes) much like six men in an English one. I shall therefore only mention the curious or novel parts of the affair, which were five in number.

The first was a race by the fishermen's wives, called, in the technical language of the country, *les mousses*. The second was a race by boys in tubs, which were navigated by means of a single oar, worked after the manner of ferrymen, or the Venetian gondoliers. Many were the upsets of these frail barks, and great was the mirth excited by their misadventures.

But greater novelties were to follow. A contest of *patineurs* was announced. Each competitor was mounted upon a kind of raft, formed of two thick boards, lying parallel to each other, and joined by cross-pieces. As the boards were level with the water, the daring navigators of this curious contrivance, who stood with one foot on each board, appeared to be actually standing on the water. The machine was propelled by means of a double-bladed paddle, sweeping alternately on each side. I cannot say much for its cleverness, as it seemed impossible to attain any thing like speed, and its dangerous character was evinced by an upset almost at the start. Oversets, however, seemed to be the order of the day, and to be matters of no moment either to the public or the unfortunate immersed.

Next came the *chasse aux canards*. At three different points of the basin a large brood of ducks was precipitated into the water. Any one who could catch them might keep them. It is needless to say that this announcement roused the amphibious population of the docks to the highest pitch of excitement. All clothing, save that required for decency-sake by the authorities, was at once thrown off, and the ducks had scarcely regained their equilibrium upon their native element before a cloud of human beings flung themselves after them. Splash, splash, splash went the sailors into the water, and quack, quack went the assaulted ducks.

I did not think that it could be so hard to catch a duck; but I saw now that that interesting bird can swim very fast when he likes, and that when at last he feels the pursuer's hand upon his tail, he has a trick of lifting himself out of the water, and half-swimming, half-flying, hopelessly out of reach. But what can a duck do against an army of swimmers, encompassing him on all sides, and practising all manner of dodges for his life? A favourite plan seemed to be to work in parties of three or four. One of the party stationed himself on the edge of the water. The others hemmed in a selected unfortunate, and drove him to the place where stood their friend. When the wretched bird arrived at a proper distance, the expectant on the bank

would jump upon him like a tiger, and so secure him by a sudden assault. I presume that in this case the victim became joint property, and was finally demolished at a common supper.

One duck, however, seemed as if he would never be caught. Never, surely, was duck so wary, or so fast, or so greasy. He rested still while his enemy neared him, and then, just as you thought he was gone, one sudden push, one rush through the water and air, and he was on the other side of the basin, as comfortable as ever, wagging his tail and pressing his feathers, ready for the same trick again. But human ingenuity was too much even for him. It was after one of these successful flights, as he rested calmly on the water, waiting for the enemy's approach, that we saw a head of one of the swimmers disappear; then a struggle, and then a hand elevating a captive duck by the leg appeared on the spot where he had lately rode triumphant. Superior to his foes in swiftness and knowledge of the water, he had yet fallen a victim to the treachery of a diver. The last victim had now fallen; a general shout of applause shook the air, and the *chasse aux canards* was ended.

The aquatics concluded with a modification of the old English pole-swarming. Various poles were projected over the basin, like the bowsprit of a ship, perhaps seven yards long, and nine or ten feet from the water's level. At the end of the poles were fixed legs of mutton. A procession along the poles immediately began, having for its object the attainment of the desirable property at the extremities. But, as any one who has ever tried to walk the bowsprit of a ship will easily know, it is not so easy as it looks, especially when the end to which you aspire quivers with your weight, and sways up and down in the most unsatisfactory manner. The consequences in this case were of course the successive dropping into the water beneath of almost every candidate for the mutton. Some began with a run and got half-way, some got nearly to the end, some turned timid at the beginning; but for a quarter of an hour every body who tried terminated his career in the water. At last a sailor-lad got out safely to the end of one pole; and soon after the same lad succeeded at a second. The prizes of the poles fell to some otherfortunates,—climbers of shrouds and yards; and then the regatta was over.

If I were to recount our adventures after this I should be hopelessly tedious, and I shall therefore leave to the imagination of the reader to picture how we dined at our old restaurant, how we went on board the steamer, how Pauline and I became once more sentimental as we crossed the moonlit-sea, how the lights of Le Havre came into view again about half-past eleven, how M. Simon and I exchanged vows of intimacy,—now, alas, broken by the distance of more than three hundred miles,—how, rambling home through the illuminations of the city, I found my village-home sunk in sleep—lotteries, *restauranteur*, Héloïse, and all; how I had to knock up my landlady, and how I finally finished by dreaming most pleasant recollections of my "French holiday."

PROGRESS OF SCIENCE.

In chronicling the events of the past month, so far as they bear upon the progress of science, the subject of murder by poison suggests itself prominently, and more especially the subject of poisoning by arsenic. Although the total number of poisonous bodies is quasi-infinite, still the number of poisonous bodies which are adapted to the purpose of secret murder is but few. To be efficient in this way, the agent should be devoid in any marked degree of smell, taste, odour, and colour; it should be cheap, popularly known, and readily accessible. White arsenic (arsenious acid) has these properties in a very marked degree, but few other substances have them; whence it follows, that if the public were adequately protected against white arsenic, little need be feared about the perpetration of secret poisoning by non-medical people.

As for criminal poisoning under medical authority, it is a contingency so rare, and we may add so uncontrollable, that means for preventing it cannot enter into the scope of any private enactment. By the Arsenic Act (14 Vic. cap. xiii.) it is taken for granted that white arsenic, mingled with soot or indigo in the proportion of one pound to an ounce of soot or half an ounce of indigo, can no longer be insidiously administered. Few, we should suppose, can be of that opinion now. At a first glance of the subject, it looks rather extraordinary that white arsenic has been the favourite agent of secret poisoning from the times of La Spara to our own. The wonder, however, vanishes when we reflect on the properties of this poison, and the association of qualities which render it adapted to the purpose of secret poisoning. We feel assured that any new enactment designed to throw obstacles in the way of the commission of murder by poison will be effectual in proportion as it confines its restrictive limitations to arsenic alone.

In organic chemistry, we have to signalise the discovery by M. Wertheim of a new alkaloid in hemlock (*Conium maculatum*), quite distinct from conicine. It is obtained from the flowers of the plant, by steeping them in dilute sulphuric acid, and submitting the fluid which results to distillation in company with lime or potash; and further complex treatments too long for description here. The alkaloid consists of nacreous iridescent scales, which fuse at a low temperature, and sublime at 212° F.

An interesting communication has been sent to the Académie Royale de Belgique,—a notice of some mural paintings, from twenty-five to thirty in number; also specimens of pottery, and an ancient silver spoon recently found at Laecken.

Mr. Thomas Forster, F.L.S., in a communication to the Linnean Society, read June 2, remarks that the order of arrival of the swallow tribe has been quite reversed. The chimney-swallow (*Hirundo rustica*), which usually arrives in Belgium about April 15, made its first appearance early in May; and then only a straggler or two. This species is not yet common, and after a most careful search after swallows up to May 11, he had not seen a single specimen. One or two are said to have been observed about the waters of Iscelles. A straggling martin (*H. urbica*) was observed by Mr. Forster on the 23d of April, but he did not see another till the 9th of May, and this species is still very scarce. On the 14th of May a few swallows were seen. Generally both species are by that time very numerous. The swift (*H. apus*), which usually arrives in Belgium before the 1st of May, did not appear till the 9th. On the 14th swifts had become more common, though much less numerous than last year. The sand-martin (*H. riparia*) had not arrived in Belgium on May 14. The cuckoo has only been heard once or twice, and that in the first week of May. The present season, Mr. Forster remarks, is altogether late and anomalous. Is the late arrival of the swallow-tribe attributable to the absence of west and south-west winds?

The submergence of the Atlantic cable attracts much attention, and some anxiety. It is a matter of regret that the two halves of the cable are twisted in different directions; one being a right-handed, the other a left-handed twist; so that at the central point of junction in mid-ocean there will be a continued tendency to unravel. How slight or how considerable that tendency may be, practice can alone determine.

There are some points in connection with the history, birth, and parentage of the submarine cable—if we may so express ourselves—which deserve to be more generally known than they are. Supposing the conditions of electrical transference to be all that can be wished or desired, there are other circumstances to be regarded in speculating on the possibility of laying down the submarine electric cable, and its durability.

The cost of the manufacture of a cable long enough to span the ocean from the Irish to the American coast is so enormous, that no company or individuals would have been

justified to incur it without previously deriving some information relative to the character of the ocean-bed. To acquire such information was no task of ordinary difficulty in itself. We are indebted to the investigations of Lieutenant Maury, U.S.N., on deep-sea soundings, for disclosing the character of the Atlantic bed in the track whereon the cable is destined to lie. These deep-sea sounding operations were the result of the maritime congress held at Brussels in 1853, followed by the co-operation of the mercantile and government navies of the countries there represented. To the investigations of Lieut. Maury, as before remarked, we are chiefly indebted.

It would appear that the path on which the electric telegraph is to lie is the only path hitherto discovered, and the only one believed to exist. It lies in a straight line nearly due east and west, between 48° and 55° north latitude, from the coast of Ireland to that of Newfoundland. In this path the water is believed to be nowhere deeper than 12,000 feet; and the variations of depth not being abrupt, the cable will have no chasms to bridge; and will thus avoid the prejudicial strain which such bridging would involve. Moreover, upon the pathway there is continuously strewn by the gulf-stream an agglomeration of minute shells, by which it is imagined the whole cable will be enveloped, and totally removed from direct oceanic influence. To the south of the great bank of Newfoundland the bed of the ocean becomes so irregular, that to lay down a cable with any hope of permanent success would be impossible. As to distance, the nearest direct line from the United States would be about 4000 miles long. Now a cable of that length would cost more than half a million of money, and could scarcely be expected to last long.

North of Newfoundland and Labrador there are also great difficulties. Ice would have to be encountered, interfering with the operation of laying the cable, and damaging it when laid. Moreover, the American end of the cable would have to traverse a barren desolate country before it reached civilised portions of the continent. The exact construction of the cable has been so frequently indicated, that we need not advert to that part of the subject. Its length is a matter which one does well to reflect upon. Its total length—2500 miles—is, as will be seen, about a third of the earth's diameter; the total length of all the iron and copper wire employed in its construction would be 332,500 miles; enough to gird the earth fourteen times round.

Amongst geographic discoveries, we have to announce a considerable abatement of honour for the Mulahacen, the highest peak of the Sierra Nevada, hitherto considered to be the most elevated mountain in all Spain. Half a century ago, Señor Rojas Clemente determined its altitude to be 3555 mètres; but from the recent observations of Señor A. de Linera, the height of the Mulahacen is only 3399 mètres; whence the peak of Nethon in the Pyrenees, 3405 mètres high, overtowers the Mulahacen; and is really the highest peak in Spain. The Geographical Society of France has presented its gold medal to our African traveller Dr. Livingstone; and M. de la Roquette has not only published a life of Franklin, but tendered a large subscription in aid of a final search for that intrepid but ill-starred navigator.

The Photographic Society are most probably to be localised in a habitation of their own. The council have announced with much satisfaction that at length a house suitable to their wants has been procured in one of the most central spots of London, and which, at no great expense, can be made well adapted to their purposes.

Amongst the most interesting of photographic triumphs are some delineations, by the collodion process, of star-groups by Professor Bond, of the United States, well known in photographic circles by the fact of his having been the first to succeed in taking a photographic portrait of the moon, and for his applications of photography to astronomical purposes. Some years ago he made attempts to delineate star-groups by photography; but the process then employed (daguerreotype) not being sufficiently sensitive, only stars of the first magnitude could be depicted. The

star-groups now experimented upon were Mizan, of the second magnitude; its companion, fourth magnitude; and Alcon, of the fifth. The result was highly satisfactory; the images distinct and symmetrical.

On two preceding occasions we have adverted, in our monthly record of science, to the speculations now taking place in the minds of certain French savans on the subject of embalment amongst the Peruvians and other native races of America. M. Alvaro Reynoso communicates a long paper to the ethnological section of the French Academy of Sciences on that subject. "Before terminating this note," says he, in conclusion, "I may be permitted to make two general observations upon natural mummies. I believe that too great attention has hitherto been addressed to the physical properties of the soil in which these natural mummies have been discovered, and that too frequently the ground has not been analysed to the end of ascertaining whether certain salts of preservative character might not be there. Moreover, I would almost venture to hazard the opinion, that certain bodies have a peculiar power of resisting putrefaction, attributable, it may be, to the predominant regimen made use of through life, by the medicines taken, and, perhaps more than all, by the rapidity of desiccation." In support of the latter hypothesis, M. Reynoso cites the instance of Charles V. The body of this sovereign, who was not embalmed, is now deposited in the Escorial, in a better state of preservation than most bodies which have been embalmed. Under the reign of Philip IV., in 1654, ninety-six years after the death of the emperor, his body was exposed in public, its state of preservation being testified to by a crowd of witnesses. A contemporary author relates that, with the exception of the nose, every part of the body, even the beard, was so well preserved, that the physiognomy of the king could be easily recognised. The flesh was shrivelled, the body appeared thin, but there was no decomposition, although, strange to say, the bier was completely destroyed. Last year, the tomb of Charles V. was again opened, and the body still found to be in a complete state of preservation.

The forty-fourth little planet discovered by M. Goldschmidt, on the 27th of May, has, on the proposition of M. Humboldt, received the name of Nyssa, the nurse of Bacchus.

M. Personne, of the Laboratory of Pharmacy, makes known the fact, that amorphous phosphorus is not completely unalterable when exposed to the air, as chemists have hitherto supposed, but that it attracts oxygen, and is converted into phosphorous acid. This acid, however, he affirms, is not a poison. Hence, when poisonings have arisen from matches of amorphous phosphorus, he suspects the results may have been due to the presence of a little ordinary phosphorus; or perhaps to phosphoric acid.

POLYGLOT READINGS IN PROVERBS.

CHARITY BEGINS AT HOME.—This is literally true in the most exalted sense. Some there are

"Whose circling charities begin
With the few loved ones heaven has placed them near,
Nor cease till all mankind are in their sphere."

But the proverb is generally applied with a sarcastic meaning to those with whom charity not only begins at home but ends there also. The egotist holds that "Self is the first object of charity" (Latin).—*Prima sibi charitas*. The Poles say, "Every one has his hands turned towards himself,"—*Każdi ma ręce do siebie*. W. K. KELLY.

BRITISH INSECTS AND THEIR METAMORPHOSES.

IV.—THE SUCCESSIVE STAGES OF THE DRAGON-FLY.

By HENRY NOEL HUMPHREYS,

AUTHOR OF "INSECT CHANGES," "BRITISH BUTTERFLIES, AND THEIR TRANSFORMATIONS," ETC.

THE widely different aspects of the moth and butterfly tribes in their larva and perfect states are so remarkable, that ordi-

nary observers (even when well acquainted with the fact that all caterpillars are winged insects in their embryonic state) are generally unable to define what kind of butterfly or moth any special caterpillar is destined to become, though an experienced entomologist is able at once to solve the mystery.

Changes still more extraordinary take place in those insect tribes whose larva stages are passed in the water, in the form of creatures whose aspects and habits do not bear the slightest apparent affinity to those they are destined eventually to assume. What can be more extraordinary, for instance, than the transmutation of the minute, wriggling, aquatic creatures, which swarm in shallow waters in the summer months, into the winged gnat, not only furnished with the power of flight, but gifted also with the capacity of producing sounds which accompany his course through the air with soft and pleasing music? Among the classes of insects which enjoy in the course of their existence such opposite modes of life—one one beneath the waters, and another in the realms of air—the *libellulæ*, or dragon-fly tribe, are among the most curious and beautiful.

The detection of the facts which have allied the existence of the graceful and glittering dragon-fly with that of a creeping aquatic creature, of sombre hue, and generally repulsive appearance, are comparatively recent.

The Dutch entomologist Gœdart called his observations on the metamorphoses of insects "experiments;" and to him they were so, for that field of research was then, comparatively speaking, unexplored, and the result of each "experiment" was not only a surprise but a discovery. We cannot now hope for such surprises and discoveries, as other explorers have been before us; but we may yet learn better from Nature's own pages than from books. Gœdart, one of the first modern explorers in entomology, entitled his work *Metamorphoses et Historia Naturalis Insectorum*,* and his researches on the singular changes of the dragon-fly are called his *experimentum decimum-septimum*. We may imagine the interest with which this persevering observer watched the successive changes of the creatures upon which his seventeenth experiment was made. Let us picture the self-taught naturalist dredging up the larvæ of the *libellulæ* in their young stage from the still waters of the clear canals, in one of his rambles outside the old gates of Rotterdam. They were no doubt taken home with great care, in some earthen vessel well-suited to the purpose, and then most probably transferred to one of glass, for the better observation of their habits and their expected changes; for doubtless his sixteen previous experiments had taught him to look for something highly curious and unexpected.

The reader may imagine the old naturalist in daily and almost hourly watch upon one or more such creatures as

* The title of the Latin translation, the original edition having been published in Dutch.

that represented at No. 1 in the accompanying illustration; at first much smaller, but, even in their minute stage, exhibiting extraordinary voracity, and devouring all insects of smaller dimensions than themselves as fast as they could be furnished to the crystal reservoir, until they attained their full size, which is represented in the illustration. To have minutely noted their progress during that period, required several weeks of careful watching, at the end of which the naturalist, noticing that they began to feed less voraciously, and then ceased to take food altogether, no doubt came to the conclusion, from previous "experiments," that a change was about to take place. How curiously and anxiously he would watch them climb, by any support within reach, clean out of the water, and cling to the twig or other substance by means of which they had quitted their native element, becoming gradually motionless, and eventually hard and stiff,

appearing perfectly dead! Indeed, had not the sixteen other experiments preceded this *experimentum decimum-septimum*, one can imagine the disappointed naturalist throwing away the bodies of his prisoners, under the supposition that loss of liberty had impelled them to a determined suicide, by quitting the legitimate region of their existence,* and thus cluding his intention of detecting the nature of their eventual destiny.

Forewarned, however, by experience, he no doubt patiently watched the dry remains of the aquatic creatures, until, after many days of unwearied attention, he perceived at last that the black horny skin of one of them began to split along the back, and that this split widened, and at last two shining emeralds seemed to emerge from the opening, which were soon perceived to be the eyes of a living creature, rapidly followed by the body, as shown in the engraving at No. 2. As the short semi-transparent blades of purple at the shoulders of the creature (at first no larger than those represented at No. 2) began rapidly to expand, and actually to grow, visibly, under his observation, he soon saw them develop themselves into exquisitely neurated wings of the richest purple, and found that he had traced for the first time the history of the singular metamorphoses of the purple-winged dragon-fly, the elegant and richly-tinted insect which is represented as accurately as is possible without the aid of colour at No. 3 of our illustration.

We have not the chance of sharing the enthusiasm of the old Dutch naturalist; and yet a series of similar observations would teach so much more, even to a modern student, than books can teach, that we cannot help recommending such of our readers as have a taste for natural history to make a few "experiments" for themselves, carefully noting down in detail the result of their observations. It was thus that the first studies of the young Cuvier were made; and the manuscript memoranda so prepared, merely for his own use, were, greatly to their author's surprise, pronounced by Geoffroy St. Hilaire the foundation of a new code of natural science.

PAINTED BY FELIX SCHLESINGER.

THE SURVIVORS.

REPRINTED FROM THE LANCET, NO. VIII.

THE SURVIVORS.

By FELIX SCHLESINGER.

WRECKED at sea! Common as the phrase is, how great the power of those syllables to startle us! There are scarcely any words expressive of calamity which suggest so much as these do; for at once we connect them with a dire struggle for life against the indomitable ocean, against darkness and storm; then following thirst, hunger, and privations of all kinds, until—when hope from its own continuance has become agony, and it appears that nothing more could be endured, or even occur, in the way of suffering and danger—then at last some pale white sail heaves up upon the horizon, nears us, hope and fearful doubt become joy and certainty, and we are saved.

All men think thus, perhaps, at the hearing of the word "wrecked;" every one supplying circumstances from his own experience or recollection, and all startled into interest and deep compassion.

Thus with the inhabitants of the fishing-village at the entrance of which is the scene of Schlesinger's picture. Those rough sons of the ocean are melted to most earnest pity by the arrival at their little quay of "the survivors." They receive them with the tenderness of women; they carry the seaman, whose stalwart frame has succumbed, up to his cottage (for many signs tell that the unfortunates are at home). His wife, who has met them on the beach, with grateful joy looks at the symbol of redemption; others of the saved follow behind. A couple throw themselves at the foot of the cross in the fervency of their gratitude for deliverance from such peril.

The sailor who is carried before us, along the sandy road-way that leads up from the shore, is seemingly not only exhausted and worn to his utmost power of endurance, but has received some injury, to judge from the expression of his countenance—maybe a limb broken by a falling spar, or he has been crushed by the terrible power of the waves. Bruised, and so helpless, he has maintained the courage of the other sufferers by the spectacle of his fortitude—has assisted them with counsel, and the instruction of his experience; and saved at last with them, shall be remembered through all their lives as the brave, hardy, patient, and noble man to whom their deliverance is chiefly due. He himself has the *matériel* for many a tale to be told of a winter-night when the tempest without renders the ingle of the fisher's cottage an enviable nest of warmth, peace, and comfort. Thus for his life grateful friends, the supreme happiness of well-doing, and that pleasure we all take such delight in—the looking-back over perils escaped and suffering overcome.

If we wanted any confirmation that fortune, merciful at last, after the trouble and the storm, has brought them to the haven at home, the incident of the dog carrying the wounded man's cap would afford it. The animal has gone down to welcome his master, finds him on the shore disabled and in pain, sees him lifted in those friendly arms, and confident that these are the best help, picks up the cap and trots along with much of that sort of human sympathy so often observable in dogs. This incident, apparently trivial, is an excellent point of design, showing that the painter has entered into the subject, and so far does him the highest credit; and is so interesting to us, that we look for more such, and are disappointed at not finding many similar little episodes scattered in the picture. We must, however, be content with those discoverable, remembering that this quality is amongst the rarest merits of a picture.

That the gale still continues the storm-bent branches of the trees testify, as well as the action of the fishermen behind, who at the prospect of a rough day appear to have left their work. The rocking of the craft at the little pier, the dark horizon, the stormy sky, and the low-flying gulls, all indicate that the baffled storm-spirit abandons not his prey without a murmur of discontent.

L. L.

THE LITTLE BLACK BOX.

A STORY OF THE SHAFTESBURY PLOT IN HALF-A-DOZEN CHAPTERS.

By G. W. THORNBURY, AUTHOR OF "ART AND NATURE."

CHAPTER I.

THE DARCY OF CROW'S NEST; OR, THE OLD CAVALIER-SQUIRE AT HOME.

Crow's Nest was an old Tudor mansion, distant some twelve miles from Oxford, whose countless towers and steeples might be seen on a clear day from a hill at one end of the Home Park. In the days of ruffs and fardingales it had been the gathering-point and centre of hospitality for the whole county; nor did Queen Elizabeth, when she visited the University, forget to visit the home of the Darcys. "More by token," says the old family chronicle, whose veracity can be depended on, "her majesty dropped her silver fan, the gift of Sir F. Drake, into the moat, as she took the air on the battlements of the Lady Tower; and a young page of the family, diving to recover it, was stricken on the head by a buttress of the turret, and so died, drawing tears from the eyes of her majesty at the extreme piteous and unhappy sight." But the tall twisted chimneys that crowned the gables, though undiminished in number since those days of prosperity, served now for the most part only as snug receptacles for the nests of starlings and of daws. From one or two shafts only, on this soft warm summer-morning of which we write, ascended thin pillars of pale blue smoke, which gradually, though unbroken by the gentle wind, melted into the sunny air. The gilded vanes, bright as stars, still twinkled as of yore against the blue sky, like guardian-planets of the house, though warped and bent by the storms of many bygone winters; almost, indeed, as brightly as when Crow's Nest loomed at the early dinner-hour of eleven through the fragrant clouds of smoke ascending from the royal banquet of Queen Bess. The windows of the north front, cold and leaden in the vapoury shade, contrasted singularly with those of the south side, which overlooked the garden, and which, glittering in the morning sun, shone golden and metallic, as if belonging to some enchanted palace of El Dorado. On old deserted rooms, once trod by nobles—on faded figured hangings—on shelves of warped and dusty books, and embroidered beds of ponderous size, plumed like hearses, the sunlight fell with a calm consciousness of peace and joy; and in this golden sea of light that bathed the old house, shadowed by so many sorrows, and sinking so rapidly into genteel pauperism, floated, like vast coral-trees rising through a sunny ocean, the old elms, whose sable inhabitants, noisy and solemn as the congregation of a Puritan conventicle, had originally given their name to the manor-house. Their unceasing cawing filled the rooms with a slumberous murmur, that while it cheered the mind with a sense of the vicinity of living things, soothed it like the whisper of a distant sea; for though some of the birds were always absent, swooping down in long low trails upon the dark new-turned plough-land of forty acres, or basking in the sun on the tender grass of the broad-oak meadows, there were always respectable citizens who remained gossiping beside the nests—half-idlers, half-watchmen—discussing the fortunes of the young birds who had scarcely yet left the egg, and certainly seen very little of the world.

Sir Richard Darcy, a crusader, was said to have built the original house of Crow's Nest; and grassy undulations in the park were pointed out as the lines of his old castle-ramparts. The second fortress arose in the days of his grandson, who, returning from Cressy, devoted to rebuilding his stronghold the ransom of three French barons whom his stout axe had beaten down on that memorable field, and erected his new keep on the site of the old chapel where the crusader's bones were resting; the foundation of which building consisted, tradition said, of earth brought from the Holy Land, in pursuance of a custom not unusual in those days of great faith and little science. The present mansion was, however, the work of Sir John Darcy, a courtier of

Henry VIII., who chose him as a favourite chiefly because he stood six feet in his stockings, and had killed a French knight of gigantic stature in a tournament on the "Field of the Cloth-of-Gold." His cognisances and proud motto—"Fight on," under a gashed hand, holding a broken sword bedropped with blood, gules—could still be seen on the square keystone of the gateway leading into the base-court; in old time the chief entrance to the house, till his son, Sir Walter Darcy, in a fit of irrestrainable loyalty, blocked up that arch, which his queen swore had been disgraced by his father's marching through it at the head of fifty hagbuteers to join the northern Pilgrimage of Grace, and made the northern door, by which Elizabeth had entered his house, henceforth the chief approach to the moated mansion.

The ground-plan of Crow's Nest was simple. It consisted of two courts; the base-court, with the blocked-up gatehouse, surrounded by the stable, smith's forge, and all those offices usual in feudal houses, which were, indeed, small villages in themselves. Fowls strutted about it, proud and despotic as sultans, followed by their chattering harems and attendant courtiers, eyeing their scarlet wattles in the mirrors of the stable-pails. Over their heads flew about white whirls of pigeons. Here Sir Robert's hawks were fed, and his hounds kennelled. A huge pair of antlers indicated the entrance to the stable; the grassy stones leading to the second door showed that it had been long disused. A second gateway, through a clock-house, led into the inner court, round which rose the brick-wall and gable-roof of the Tudor mansion.

A door to the right of the gateway as we enter leads to Sir Robert's smoking-room, and a passage from thence to the long dining-chamber, now seldom used, that extends along the whole of the south front; from this room a covered cloister brings you into the immense kitchen. A low arch to the left is the entrance to the chapel, at the end of which is the drawing-room. On the east side is the hall, with a door at one end leading to the buttery. The house is entered from without by a flight of steps leading from the terrace into the porch, and so into the hall. Over the hall is the queen's room, still religiously kept sacred; and a small oratory, or painted closet, to the left is appropriated to the use of the fair Mabel Darcy, the daughter of the present proprietor.

The gardens of Crow's Nest are a sad relic of faded splendour. Clipped yew-hedges, still retaining traces of the fantastic shapes of birds and beasts into which they were once cut and clipped by scientific gardeners, now, thanks to indignant nature, have recovered the wild luxuriance of their aboriginal state, and are intersected by weed-covered walks, and flower-beds fast relapsing into shapeless fallow, but still sprinkled by a few straggling flowers, which feebly assert their aristocratic birthright, just as a poor gentleman of the time might have endeavoured to make up for broken elbows and threadbare waistcoat by a knot of new ribbons fluttering at his sword-belt or on his hat.

The inner garden was distinguished by the Darcys by the name of "Queen Elizabeth's Walk," because there her majesty, says the old chronicle, still preserved in the family library, "did graciously and with a most heavenly smile pluck with her own royal hand two roses from neighbouring and intertwining bushes, one white and the other red; and putting them into either bosom, thanked God that He had in His mercy vouchsafed in the person of her grandfather to end such senseless wars as those between the houses of York and Lancaster."

In the midst of this garden—now a mere tangle of hedges, where thrushes, blackbirds, and nightingales built and sang all day as in a thicket, undisturbed by busy gardener or prying boys, being allowed to feed with impunity on the few cherries and plums that grew on the neglected trees and the unpruned branches breaking from the garden-walls,—stood a fountain, formed by a white marble figure of Italian workmanship, generally supposed to be Diana. It represented a maiden, with downcast head

and modest eyes bent on the ground, almost naked but for a thin fluttering drapery, which she seemed to have snatched up hastily from the ground at the first alarm of some distant voice, or the sight of some daring intruder. The village curate said it was Diana alarmed by Actæon; but the rector, who was thought a much more learned man in the parish, because he never preached a sermon without quoting St. Chrysostome to prove the divine origin of tithes, declared it was Niobe lamenting the death of her children. Fed by an adjacent spring, the fountain had never ceased to flow during the family's births and deaths, prosperity and misfortune, and still threw its column of volatile silver far into the air, showering its broken crystal over the figure of the goddess, and shrouding it in a thick veil of pearly drops, that the rector fancifully said resembled the tears of the weeping mother; his imagination, never very conspicuous in his sermons, which were of the dryest school of theology, being in this case, perhaps, stimulated by his desire to prove his argument.

The curate, on the other hand, with a quiet smile of triumph, used on such occasions to declare that no person of parts skilled in the humanistic could deny that the water not unaptly represented the drippings of the river Alpheus as the goddess rose hastily from its stream. The knight, when appealed to on such occasions, used generally to say that, "Zounds! it looked to him more like a milkmaid who had upset her pail, and was going home dripping to get a change."

Yet, without entering into the discussion, Mabel would playfully interfere, and holding all three by the hand, would make them watch the "Fairies' Arch," as she called the silver jetting, as it bloomed into a rainbow in the sunlight, and fell with a musical babble into the mossy cracked cup of marble below, from whence it wandered away in a little well-worn channel to freshen the turf and feed the neglected flowers.

"Methinks a pretty emblem of Christian charity," said the rector on one such occasion; "doing good by stealth,—nourishing the roots of unsprung flowers, and wandering away ere they can delight it by their grateful perfume or shade it from the thirsty sun with their playful shadow."

"Drat it," said the knight, "don't talk so like a play-book; leave that for wenchies in love. Zounds, if I can compare it to any thing but my cask of canary, that is always filling, yet always emptying. It is like a woman's tongue,—there's a simile for you, master rector,—always babbling, never still."

"And always like music in the ear," chimed in Mabel.

"Yes, indeed, when it isn't scolding, or lecturing, or preaching, or begging for money or new satin-gowns or silk fallals—eh, Mabel? I have you there."

"Was my brave mother's tongue such a tongue as that?" said Mabel, looking down, yet stealing a reproving glance at her boisterous father's jolly face.

"Hang it, girl, don't—now don't mention her! She, you know, was perfect; but there are no such women now—are there, master rector? Adad, no! now they must paint, and wear muffs, and ride in the ring, and such fallalery. There are no such women now, Mabel. But there, don't pout; thou'rt a good girl, and shalt ride Black Jack to-morrow, and go a-hunting just as thy mother used; and thou shalt see a buck killed too, that thou shalt; and, though I'm but a poor gentleman, and forgotten by the king,—God bless him!—thou shalt sport a blue feather with the best. So cheer up, girl, and don't be angry with the old trooper, though he is rough; for he loves thee to his heart,—don't he, master rector? And thee shalt have a husband,—an honest fellow come of good Tory stock, who can follow hounds; and none of your scented fops, with wigs and snuffboxes, who don't know a barb from a Galloway sorel, and never breasted hunter in their lives."

"Will Mr. Troutbeck be in the field to-day?"

"Don't mention the name, wench," said the father, with a furious look. "The Troutbecks and the Darcys are sworn

foes,—Whigs and Tories, cat and dog, baker and devil; as my father used to say, our blood wouldn't mix in a basin. Didn't the old Whig laugh when Roger told him that I was going to cut down ten more elms in the avenue? and the next day, in the hunting-field, didn't he sneer (d— him!) and ask me if I could sell him some good elm-wood to make gates for his five new farms? And he a Whig, too," said the old Cavalier, "and an exclusionist, and a whining, psalm-singing, snuffing rogue in the old times,—one that, by God's grace, would have cut off the blessed martyr's head with his own hands."

"And how did you answer him, father?" said Mabel, with a smile at her father's vehemence.

"Answer him, wench? Why, I told him I did not know how much coffin-plank was a-foot since the day after Wigan Lane, when I had to bury some of his canting brothers; and then I rode off, whistling."

"And let him be confounded,
And so be every Roundhead."

"A soft answer turneth away wrath," said the rector. "Marry, the knave was well answered, with his proud flouting; and some might even have repaid him with a buffet."

"Egad," said the old soldier, "when I rode by the side of Prince Rupert through Birmingham we pistoled a dozen of them for daring only to call out 'Down with the robbers!' but then they were armed and had swords. I would not strike even a Puritan if he had no sword on; besides, there has been blood enough shed in that quarrel."

Sir Robert Darcy was an old impoverished country-gentleman, so long removed from court, and even the camp, that he had become in manner little better than a farmer. In education he had never been much superior to one. He was an excellent swordsman, but a bungler in logic; a sure shot, but a bad grammarian; a bold rider across country, but ignorant of any book but the Duke of Newcastle's pedantic work on horsemanship. He would have ridden forty miles before breakfast to see a game-cock of a particular breed, but not one to have converse with Dryden. Neglected by the court, in whose cause he had mortgaged acre after acre, he knew nothing of court-politics beyond what the weekly papers told him of the Popish plot, which he thought an imposture; and occasional scandals about Madam Cawwell and Mrs. Gwynne, about whom he was very tolerant. His time was now spent in hunting, hawk-ing, and cock-fighting, interspersed with visits to the assize town; where he delighted to beard the Whig gentry, quarrel about precedence, tell old tales of Goring and Lunsford, and discuss a bowl of sack with old Tories like himself. His daughter's education he intrusted to Mr. Richard Wilson, a poor, expelled, nonconformist clergyman of ultra-Calvinistic principles, whom he had learned to tolerate from love to the memory of his wife, who had turned heterodox during her last illness, and had engaged the persecuted man for her private chaplain.

Mr. Richard Wilson was one of those men whom persecution educates from time to time to preach toleration to the world. His family had been dowered by just nature with two gifts—virtue and misfortune. His father had been shot as a spy while praying with a dying soldier of the Ironside regiment. He himself had lived a life of concealment and disguise; but in spite of all this, his mind had remained unhardened; what might have made other men cynics made him a gentle lover of mankind, pure as an apostle, but too humble and shy to become a reformer or a public preacher. He had learnt to suffer for his faith, but not to extend its doctrines; nay, his gentle spirit had almost learnt to dread too zealous proselytism as a first step to persecution. Of the vices of the court he knew little. Shut up among his books, and absorbed in religious abstractions, which to him were the only subjects worthy of study in life, he had grown into a shy student, whose only wish was that his sect might be tolerated, and that Popery might be rendered harmless.

To Mabel, whom he taught as a daughter, he had con-

fided all the polite learning of which he was master, including Italian hand, a little French, the use of the globes, and an outline of the legendary botany of those days. Taught to consider it necessary for a gentlewoman,—for Lady Jane Grey was Mr. Wilson's type of the Protestant gentlewoman,—he had enabled her to read Virgil with ease, and was now busily engaged in trying to make his less steady but affectionate pupil master the Greek alphabet; Greek being, as he told her, in his stiff and old-fashioned phrase, "a speech very rich in fit epithets, and, as it were, the foster-nurse of all succeeding languages of the European family."

"So the old play says, dear Mr. Wilson," said Mabel, disregarding the slight shudder with which her instructor heard the source of her quotation:

"The ancient Hebrew, clad with mystery;
The learned Greek, rich in fit epithet,"—

Do you hear?—

"Blest in the lovely marriage of pure words;
The Chaldee wise, the Arabian physical;
The Roman eloquent, and Tuscan grave;
The braving Spanish, and the smooth-tongued French."

"Very apt, very apt, dear child of mine," said the minister; "for the Roman doth always sound to me, peaceful as I am, resonant like a blast of the *lituus*, as Horace calls it,—but we have not got so far as that, or the battle-trumpet,—and useful chiefly for orators and princes (while God permits such men to dominate); while the Greek is fit for lovers, or warriors, or statesmen, or citizens, or any one, being alternately soft as the breath of Zephyrus, stormy and loud as Aquilo or Boreas—*Arbiter Adrie*. Do you remember, dear, Horace's words, *Quo non arbiter*—?"

But Mabel, whose mind had been much wandering from her book during this harangue, suddenly clapped her hands, and flinging down the Greek Grammar, ran to the window, dancing like a child with delight. "O, Master Wilson, look here!" she cried; "here's Roger currying Black Jack; and I'm to ride him to-day to the hunt, and will lead the field, papa says, and ride like a beggar on horseback. Put on the fringed housing," said she, "good Roger. Clean the heavy silver hunting-whip," she cried, opening the lattice, and calling out of window to the delighted servant, an old soldier, with a long white scar down one side of his face. Roger looked up delighted, and pulled off his felt-hat.

"Alas!" cried the pale student, sighing over his books. "Behold, said the preacher, all was vanity and vexation of spirit, and there was no profit under the sun, and one event happeneth to all."

"And why, dear sir, these unhappy texts? Is not your religion happy like mine? Does not the same Being say, there is a time to laugh, as well as a time to weep?"

"But he putteth 'to weep' first; and even the Pagan writer learnt to say, *Τὸ ἦν ἀπὸ λύπης ἀρχόμεθα, we begin life with sorrow*. Well indeed did the Thracian, as Nicomedes tells us, weep when a child was born, to think of what he should suffer, and laugh when he died, to think of the sorrows he had escaped. But it is natural for thy years to assert that the Vulgate says: '*Man* is born to sorrow, as the sparks fly upwards.' God forgive me for such flippant and madversion to Scripture."

The laughing girl, sobered in a moment by the serious look of her instructor, turned again with a half-sigh to her Greek alphabet, covering the letters one by one with her tiny finger, as if committing their names to memory; while the tutor, bending with closed eyes, as if absorbed in inward meditation, repeated half-aloud the dicta of his stern creed:

"And I looked, and lo, a Lamb stood on the Mount Zion, and with him an hundred forty and four thousand, having His Father's name written in their foreheads;" and he repeated again in a low chant, "having His Father's name written in their foreheads." Then a low murmur, as of a prayer, and these words became audible: "And there shall in no wise enter into it any thing that defleth, neither what-

soever worketh abomination, or maketh a lie, but they which are written in the Lamb's Book of Life—but they which are written in the Lamb's Book of Life. Yes!" cried he, starting up as from a sort of trance, his hollow eyes turning in their sockets, his thin hands clasped and raised in adoration towards heaven, his whole frame quivering as if shaken by a spirit, "before the earth arose, or light was born, the number was written in the volume of the Book; before the voice was heard in Patmos, or the great cry of 'How long, O Lord, how long?' resounded in the golden courts, and over the crystal sea; before the pale horse had trodden Paradise into graves, or death and hell had blasted the smiling world;—and it shall be found there, when the stars have fallen like ripe fruit from the wind-shaken tree, and the blood-stained Ahab of the world have crept into the caves, and the heaven is rolled up like a scroll, and the sea turned to blood, and the last trumpet broken, and the globe, like a cup of glass—"

"My dear Mr. Wilson, what means this? My father will hear you—"

"Be not frightened, maid; for I am moved to speak of these mysteries, and the vision of the night stirs in my blood like a fever."

"My dear Mr. Wilson," said Mabel, clinging to his arm, and gently forcing him into his seat, where he sat for a moment exhausted, shading his eyes with his hand, and wiping the moist drops from his pale forehead, "I have long seen you troubled, but dared not speak, lest my father should mayhap anger you with some rude story about those dreadful times of bygone trouble. I observed you pale and haggard when you came down to breakfast, and you did not smile when my father filled up your cup, and made his usual joke of Sir John Barleycorn being able to throw the best wrestlers in England; and on Tuesday—yes, Tuesday—when we walked out together to cull simples in the Home Wood, you picked Ragged Robin and called it 'Bedstraw.' Now, dear Mr. Wilson, do tell me what's the matter with you. Tell your own child Mabel;" and she fondled and kissed his hand with all the tenderness of a child. "What has happened? My father loves you, and never thinks of your admiration for Titus Oates; he's forgotten that. Has Roger dared to taunt you? He shall go in a moment;—yes, that he shall,—though he did save my father's life at Naseby. What of that? Would not any brave man save another's life?"

"Nay, dear Mistress Mabel," said the minister calmly as before, "it was but a vertigo, a cephalic weakness;—nay, go not for the cordial-water; it would but heat my blood."

"I can think of but one thing. Roger told me that the stage-coach dropped a letter for you last week at the lodge-gate; and that when you saw it, you turned pale, and muttered between your teeth 'God give me strength' three times."

"I had a vision last night," said Mr. Wilson, answering without replying to the question. "It was in the dark night,—the middle of the night, when deep sleep falleth upon men,—I lay awake and prayed, and the moonlight, which had been for hours moving across the room like the shadow upon a dial, at that moment fell athwart my couch, and shone upon my face. I could hear the great clock ticking above me in the turret; for the owls had long ceased hooting, and the dogs had fallen asleep, weary of howling. The pale-blue light fell, I say, upon the wall and upon the floor, and seemed now to me the same light I had once seen when a child,—the day before my father's death,—when I awoke at midnight, and felt a cold hand upon my forehead. Suddenly the light seemed to grow into a spot of brightness, and I was aware of a presence; and fear, as the Uzzite says, came upon me, and trembling, and made all my bones to shake. Then a spirit passed before my face; the hair of my flesh stood up. It stood still; but I could not discern the form thereof. An image was before my eyes, shadowy and vague; and I heard a voice. Then I shut my eyes, and prayed; and when I looked again, I saw my father just as I beheld him after death,—calm, almost

smiling, a bloody rag about his forehead, his hand pressing the death-wound in his side; and I leaped from my bed, and would have embraced him, but he waved me back, and pointed thrice in a particular direction. Then I hid my face and prayed for strength; and when I looked up again, the moonlight had faded, and the wind had risen, and the rain lashed in fitful drifts against the window-glass, and I fell asleep commending myself to God."

"And whither pointed the apparition?" said Mabel.

"That I may not tell thee. But let us resume our studies. The storm is gone. It is as the preacher says so beautifully: 'Lo, the winter is past, the rain is over and gone; the flowers appear on the earth, the time of the singing of birds is come, and the voice of the turtle-dove is heard in the land.' Do you remember, dear child of mine, how Flaccus tersely describes such a change, which, although he speaketh of the physical microcosm, does not unaptly resemble the vicissitudes of the microcosm:

*'Solvitur acris hiems grata viro veris et Favoni,
Trahuntque siccas machinæ carinas;'*

referring here, as the commentators tell us, to the launching of the galleys and frigates at the approach of spring. Then, again, with equal truth:

*'Ac neque jam stabulis gaudet pecus, aut arator igni;
Nec prata canis albicant pruinis.'*

Yet how inferior is the Roman to the Jew, inasmuch as he does not see the moral beauty of nature in its typical and profoundly prophetic aspect! For are not day and night emblems of joy and sorrow; winter and spring, of life and death? Does not spring arise like a beatified soul, as St. Jerome hath it, from the icy grave of winter? Are not the flowers God's love, written in strange cipher, differently interpreted by each? Are not the winds and storms types of sin and evil? That swallow yonder, just flown beneath the eaves, is an emblem of the soul's migration. Is not the sunlight full of the present, and moonlight of the past? Then look, again, at the voices of the year. The robin carols sad and lonely in autumn, like a lament for youth, which is spring, and manhood, which is summer. Then the nightingale embodies the deep but unsatisfying joy of summer, and the cuckoo the hope and promise of May, repeated and babbled over as children chant the names of those they love. And why does spring change into summer, and then just as we learn to love it fade into autumn, and then sink into the old age and death of winter, whose corpse is strewn with dead leaves and frozen flowers? Why, doth not the scripture answer all this in a breath, and say: 'Man is but a pilgrim and a sojourner; few and evil are his days. Man groweth up, and is cut down; he is like the morning-gloud and like the early dew; we pass by, and lo, he is not.'

"O, dear sir, why did you not become a poet or a preacher?"

"When I was yet in the bonds of iniquity, and was still at college, I did hanker, my child, after the flesh-pots of Egypt; but when I grew a Christian man, I put away the things of the reprobate child."

"These words of thine are but to divert me from my question," cried Mabel; "and though I know little of the world, I know I have not yet plucked out the heart of thy mystery, as the playwright says.—But here is my father: let us to our studies."

As Mabel hurried to her book, the tramp of a heavy jack-boot could be heard along the corridor, accompanied by the jingle of spurs, the occasional crack of a hunting-whip, and the whimper of a gaug of puppies, whom the owner seemed attempting to keep in order, while he shouted out a Tory song with such accompaniment as the following:

*"He that is clear
A Cavalier*

(Come, thine, Towler.)

*Will never give repent,
Although so low*

(Come, to heel, I say.)

(Howl of the dog, as if belaboured to the music.)

His substance grow
That he may not drink wine.

(Rat ye! Who-o-o-p, Dewlap; down pup, down.)"

Several doors were opened and shut, with curses; then the voice broke out again with the old Cavalier song:

"It was a black cloak,
With truth be the joke,
That killed many thousands, yet never much spoke:
With hatchet and rope
The gallows old Scopo
Did join with the devil to pull down the Popo.
He set all the sects of the city to work,
And rather than fail would have shared with the Turk.
Then let us endeavour to pull the cloak down
That cramped all the kingdom and crippled the crown."

"The morning to ye, Master Wilson; and, in the name of the brave king, where have ye been, Mabel; for I've been all through the house,—in the still-room, and the blue chamber, and the tapestried chamber, and the queen's room, and Heaven knows where; for it's dull work ferreting a warren with a hundred holes when there's only one rabbit. Why, girl, I'm in such spirits I could run a deer down on foot, if it wasn't for a twinge of rheumatism in the hip—a remembrance of cold caught by night-bivouacking; I haven't felt in such spirits since Edgell morning. Roger remembers it: we've been talking over it. Roger, are the hounds ready?" said the old Cavalier, shouting out of window into the court, where the sound of hoofs, and neighing, and clatter of pails indicated much bustle.

"In a trice, your honour," shouted a lusty voice.

"That bright morning, I say,—don't waste your time over those books, Mabel,—when the Show troop, as some of them called us, and I at their head, prayed to lead the charge with the Life Guards at Edgell, and all the orange scarves waved before us like a field of marigolds,—I had only time to bend to the mane of my horse, and say,—egad, I could think of nothing but grace, for it was just dinner-time,—For what we're going to receive the Lord make us truly thankful." Jacob Astley laughed, and said, "Darcy, say after me a soldier's prayer: 'O Lord, Thou knowest how busy we must be this day: if we forget Thee, do not Thou forget us.'" Five or six of us said that; for we knew 'No brave man need be afraid of hell,' as the adage goes. "'Tis good to begin well,' is one good proverb; and 'He can want nothing who has God for his friend,' says another. The enemy lay before us in waves, thick as corn in a field. There were Denzil Holles' men, flaming in red—that was the reserve; and Lord Brooke's, in purple; and Ballard's, in gray; and Mandeville's, in blue; and Stapleton's lobster, as we called them,—they were so difficult to crack,—that alone in steel like so many looking-glasses; and we had some of Newcastle's 'lambs,' white as the foam on our horses' breasts; and Rupert's men, like grave-diggers, as they were, in black. And his majesty rode down our restless ranks, his star shining on his breast; and Rupert, his scarlet cloak glittering as if it was on fire, swept after him; then the trumpet rang out, 'God and King Charles!' and we drove through them with a burst and a crash, like the hawk through a cloud of larks, or like a whale through a shoal of herrings." Unable to restrain the wild flow of his spirits, the old soldier broke out,

"Marching along, fifty score strong,
Brave-hearted gentlemen, singing one song."

"Well, but father," said Mabel, wishing at least to divert the conversation, if she could not stop it,—for it was at Edgell that her tutor's father was shot,—"tell me that story I am so fond of, of the siege of Bristol, where brave Colonel Lunsford was shot by your side on the steps."

"At the Frome Gate, my wench—the steps at the Frome Gate," said Sir Robert, delighted to launch into the full tide of his old recollections. "You remember the old ballad:

'There came a post from Banbury,
Riding on a blue rocket,
And told how bloody Lunsford fell,
With a child's arm in his pocket.'

Well, we were with the Cornish men, and were played upon by musketeers from windows, so near that we were literally scolding one another,—ay, that were we: and 'robbers' and 'copp-heads' flew about as quick and stinging as the bullets. Well, we had two or three brisk bouts, and were just putting a petard to the city-gate, when they saluted us with iron slugs and pike-shot, and ten of our van fell, and Lunsford among them. Sir Nicholas Stanning was groaning, for a case-shot had broken his thigh; and Colonel Bellasis was bleeding in the forehead. I myself had a shot on the bar of my headpiece; you may see the mark still, for it hangs in the hall." (Mabel had seen it a thousand times, and heard the story as many, but she listened with smiling interest. A tale of such danger had always a charm, especially when endured by one so beloved.) "Lunsford, when I went up to him, was shot through the brain, and past all surgeons; but seeing Stanning groaning, I went up to him, pouring out a flask of canary that I had about me into a steel cap that lay near, and held it to his lips. 'White coat,' he said to me,—he thought I was his friend,—'white coat, it tastes of blood.' But before I could answer, Rupert came spurting by, and ordered me to lead the attack on the Windmill Fort, and I dashed off; and, 'Come rack, come rope,' said the prince, 'we'll turn out these vermin before dusk.' I took it with a wet thumb, and was about to lead a party of the gravediggers to wade over the quay into the city, when they sent out a drum to desire a parley, and I sent back a trump; and, egad, if before night we weren't carousing in the governor's own house, and at day-breaking were marching to storm Berkeley. And who rode with me through Gloucestershire but Will Scroop, a young scape grace, whom his blessed majesty had just before reconciled to his father, who was as proud as Lucifer and haughty as the devil. He was the same who said at Edgell, 'I am now going down the hill, my son, to serve the king; and if I be killed, you, my son, will have enough to spend.' 'And if I be killed,' said the witty rogue, 'you'll have enough to pay.' Egad, the boy, though, died. They were mad times, lass, mad times; and it's

'Farewell, my Lord Wharton, with hev,
And farewell, my Lord Wharton, with ho;
The sawpit did hide him;
And spade did unh de him,
With my trolly, lolly, ho!"

"And were either of the brave gentlemen killed?"

"Old Sir Gervase was found stripped, lying among a heap of sixty dead men of Lincoln,—pikemen,—and with sixteen wounds in his front,—always the front; no true Cavalier got shot in the back. And why? because he never showed it. We left that for the Rumpers. Sixteen wounds had he, and all in defending the standard; but the frost had stanch'd the old man's Plantagenet blood."

"One would think by your talking, father, that blood improved, like wine, with age."

"So it does, girl, if a man does not turn sour with Whiggery. Well, the brave lad his son found him out; warned him by a fire of broken muskets; poured some wine, which is as good as life-blood,—poor old man!—if it be any thing like our claret; carried him to a warm lodging, and the next day, in the king's coach, to Oxford. Those were the times, when with Tories it was

'Boot, saddle, to horse, and away!
Saddle the roan and the flea bitten gray;
Boot, saddle, to horse, and away!'

But you seem glum, Master Wilson, as if you hadn't heard these old campaigning stories of mine before; and Mabel here hearkens with as much relish as a Whig listens to treason. Have you seen to-day's *Gazette*? Egad, I thought as long as Tony (Shaftesbury) lived, and those murdering Londoners, no true Tory would ever get in the saddle again;

but here, I see, the Duke of York was busy last week in Scotland, trying his new sort of boots on the Covenanters. 'Once a knave, and ever a knave,' is a good proverb; and 'If clods won't do, try stones.'

"Blood-drinking Rabshakehs!" cried Mr. Wilson, suddenly starting from his seat with a vehemence that astonished the old knight, who always upheld him for the only good Roundhead he had ever known, his heavy folio as he rose falling, and nearly crushing one of the puppies, who had been playing with Sir Robert's whip-lash.

"Blood-drinking sons of Belial, there shall come a day when James of York and such as he shall drink of the wine of God's wrath; for in his hand there is a cup, and the wine of that cup is red!"

"My dear sir," said Mabel, "be composed. My dear father, his head has been much disordered; his pulse is feverish, and his mind a little wanders. Let me lead you to your room, Mr. Wilson."

"Ah, do," said Sir Robert kindly; "for he talks rather at random. And, harkee, tell William the butler to mix a glass of strong waters, and bid the cook make him a posset for night. 'A stitch in time saves nine,' 'Better a penny to the doctor than sixpence to the sexton.' And read some of 'D'Urfeys Pills to purge Melancholy,' forget Ahab and Rabshakeh, and I wager a Jacobus to a bad halfpenny you're well before the day's run out. But what's this?" he said, stooping to the floor and picking up a paper the puppy was tearing with his teeth. "A leaf from the—the—what? the Prophecies of Muggleton! What, Muggleton the mad tailor! And this? 'A pious justification of the Parliament's conduct in the late war.' Is this what you teach my daughter?"

"No, no, father, indeed he does not; he never speaks of any thing but Virgil and Horace."

"Who's Virgil, wench? Not Virgil that wrote on Fariery? it can't be he. You don't mean that Virgell who held Stamford against us for six weeks, and made his men poison their bullets, d— him. Now look you here, Master Wilson, I respect you as a good sort of man; you've taken much trouble with this sweetening here; but drat it, may I never stride horse again if I don't turn you out neck and heels if I find you talking any more nonsense about your Rabshakehs and Ahabs. Leave that for Sundays and Church-of-England men, who have got a right to the Bible, no thanks to Oliver."

"I cannot hold my tongue," said Mr. Wilson, whose usual fear and respect for his patron seemed melting rapidly in the force of a fanatical fervour, which increased in the very attempt to repress it, "when the Lord bids me speak. No—not, Sir Robert, even for thy bit and sup, can I hold my tongue. 'I will bless the Lord at all times; His praise shall be continually in my mouth.' I have put my hand to the plough, and have looked back; I have been luke-warm in the true cause, and shall, if I amend not, be spit out like those of Laodicea; for I have been neither cold nor hot."

"'Eaten bread is soon forgotten,'" said Sir Robert, with an angry snort, bursting into a quotation from one of the few books he ever read:

"'Still so fervent and opposite,
As if they worshipped God for spite;
The selfsame thing they will abhor
One way, and long another for.'"

"Am I to honour God or man most?"

"O, none of your cant with me. So ho, Towler! But I warn you, Mr. Richard Wilson, if you teach your cursed rubbish to my daughter, my doors shall be shut upon you. No, no, Mabel, don't talk to me. I'll have no canting fellows here, to make the maids hang themselves because they think they are not elect, or any butler cut my throat and steal the family-plate on the strength of his predestination. We're old friends, Mr. Wilson, but take care; egad, the Darceys keep their word."

And so saying, Sir Robert, whose spring of cavalier re-

collections had revived all the partisan fury of his younger days, his Toryism having been somewhat fanned by the remembrance of its being the anniversary of Edgehill, strode out of the room, clacking his whip and followed by his train of puppies, who yelped and howled and barked as they chased each other down the long corridor. Mr. Wilson, according to his usual custom, wished the hunting-party farewell at the hall-door.

"I tell you what it is, Mabel,—and give me a kiss, my beauty,—they're a bad lot; and, as the proverb goes, 'What's in the bone won't out of the flesh.' I'm sorry I said any thing about the meat and the drink,—why, drat it, if he was Old Nick himself, he was welcome to that,—but my blood was up; and it does gall me to hear a man quote Scripture as if it belonged to him and no one else. For he's a worthy gentle-hearted man,—tender as a woman; and I hardly know what I had done without him. But there, you know what it says in *Hudibras*. Talk of wit!

'He could raise scruples dark and nice,
And after solve 'em in a trice,
As if divinity had caughted
The itch on purpose to be scratched.'"

This was, however, said in a low voice, so as not to be overheard by Mr. Wilson, who, having apparently relapsed into his former fit of abstraction, was wandering slowly after them, with his finger keeping a place in a ponderous book which he brought with him, either unconsciously or from pure affection.

Sir Robert, gay in a rich embroidered suit, had already mounted his old chestnut charger, and was administering playful and paternal flips to the incorrigible puppies, who seemed to do nothing but roll on their back, and run about with the stumbling sprawl peculiar to the youth of such animals. Mabel was jaunty enough on the back of Black Jack, her delight, examining her whip, looking at her bridle, and patting her horse's neck with all the grace of the full beauty of maidenhood. But we must describe Mabel, and not leave the reader to invest her with false attributes. She was now about nineteen, and the toast of half the county, though she seldom appeared in public but during assize-time, once a-year, at the county-ball. Her cheek wore a flush of sunny crimson, her complexion being of that mellow brown which you see on a newly-expanded hazel-leaf. Her eyes were of a deep summer-blue, of the hue of a pure twilight, contrasting richly with the deep lustrous ruby of her full lip and the snowiness of her bosom, which the dress of that day left rather more exposed than in the severer costume of modern ladies. Her blood had a pretty habit of rising in beautiful flushes of "rosy red," as Spenser calls it, in moments of enthusiasm, when she heard a thrilling story of bygone patriotism from her father, or some recital of stern martyrdom from her gentler tutor. She was dressed in a tight-fitting horseman's coat of fine purple cloth, the broad golden buttons of which left it open below the waist; its flapped pockets spreading over a skirt of a deeper colour, which fell in broad folds below her feet. A bright yellow breast-knot fastening her jerkin at the throat, left two broad pendent ends to flutter up against her eyes, or cling to her cheek. And when she coquettishly cast them behind her to flutter around her, waving in the wind, her father, gorgeous and erect, in black velvet and silver-lace, eyed his daughter with pride and fondness; and her old charger fretted wantonly and proudly with its little burden, as she adjusted her fringed gloves and her French riding-whip.

"Where's old Roger?" said Sir Robert impatiently to the rough-haired stable-boy who held the horses.

"I'm a-coming, Sir Robert," said Roger cheerily, as he appeared, according to immemorial custom, bearing a huge silver race-cup upon an embossed salver; "and a blessed day of remembrance it is, Sir Robert, to think what a different hunt we were leading this day twenty-two years. Well, my—if Miss Mabel isn't as beautiful to-day as a rose on a June morning!"

THE HOLY FAMILY. BY MICHAEL ANGELO.

"None of your flattery, Roger, or you'll turn the minx's head. She is pretty enough, as times go; but you should have seen your missus when she danced the Canary with me at the king's mask. But we shall be late. Here's to the memory of the blessed martyr," he said, raising the cup to his lips, while Roger took off his hat with the deep veneration of a trooper of the old school. Mable took a sip; and Sir Robert handed it to Mr. Wilson, and bade him drink to the blessed memory.

Mr. Wilson, without replying a word, replaced the cup on the salver, put both down on the door-step of the hall, and re-entered the house.

"The man's moon-stricken," said Sir Robert, shrugging his shoulders. "He used to laugh when I spoke thus; but now, a — of him, he turns as black as Hugh Pétars: he'll be forbidding the name of the king to be mentioned in my own house."

"If you please, your honour, I think it was this day twenty-two years ago a party of our gravediggers shot his father, I've heard say; but in my humble opinion, if he would preach up treason, they did quite right."

"If he preaches rebellion here, out he goes," said Sir Robert. "I'll make every jade and fool in the house sign an oath of allegiance to the king."

"He can't abide the king, Sir Robert; I seed him turn up his nose when you said something about the health of the king's martyrs."

"Turn up his nose, adad; I'll cure him of that. But

never mind now, Mabel; it's an hour's trot to the 'Three Oaks.' Mount Roger, and shout

'For liberty and privilege,
Religion and the king,
We fought; but O, the golden wedge,
That is the very thing.'

Now then, Roger, strike in, and let the old psalm-singer hear it:

'There lies the cream of the cause,
Religion is a Whig;
Pure privilege eats up the laws,
And ories for king—a fig.'"

Then, to the loud blast of the French horn, which Sir Robert wore strung round him, and which sent the rooks in a black cloud out of the elms, to the cracking of whips, and the joyful yelp of some half-dozen stag-hounds, the party swept down the avenue.

THE HOLY FAMILY.

By MICHAEL ANGELO.

Of all the artists of great name, there are none whose early works are so well known to us as those of Michael Angelo, and still fewer of whose first efforts an equal number are preserved; a circumstance which may be attributed to the fact that almost all of the productions of his youth are of a religious class of subject. The reason why these works

are so well known and esteemed in England is, probably, that the great Italian has always been a favourite with us islanders, from a certain love we bear to him on account of his personal character, which greatly resembles that we arrogate to ourselves as Englishmen. Indomitable, haughty, full of a high reverence and feeling for duty; reserved and cold to strangers, yet to those he loved truly loving,—he was a man exactly after our own heart.

The engraving before us is from an admirable specimen of what is called his "early style;" a period of his practice the simplest, purest, and most charming of all. It represents the Holy Family,—a subject he delighted in,—and has been drawn from a cast in the Crystal Palace of the original at Florence. Its specific qualities are delicacy of line, simplicity and purity of design, and marvellous truth of texture, evinced both in the draperies and the flesh; a quality remarkable in sculpture, and which distinguished Michael Angelo from others. The reader will notice the ineffable sweetness of the Virgin's expression, the graceful form of the child, and the beautifully natural casting of the draperies. The manliness and tenderness of the whole work is palpable; there is nothing petty, but all is simple, graceful, and severe. It appears to have been executed very early, probably soon after quitting the school founded by Cosmo di Medici for the study of the antique, evident traces of which it bears.

There are, we believe, no less than five similar works of this subject by Michael Angelo; of which probably the most beautiful is in the possession of the Royal Academy, given by Sir G. Beaumont, R.A., whereon may be seen the chisel and rasp marks of the great artist's labour just as he left it unfinished.

I. I.

IN THE MALLE-POSTE.

It started hours later than the heavy diligence, and would arrive long before that huge conveyance. It was, besides, a smoother and more grateful mode of travelling, this by Malle-poste. As to the propriety of going forward at all that night,—it was the proprietor of a certain wayside house of entertainment who was speaking,—it was not of course for him to counsel monsieur. (Shrug.) He would merely submit (shrug) that certain *infames* had been heard of lately along the road,—wretches who came from behind hedges, and used travellers with small courtesy. *Mon Dieu!* was it not only the other day that the Great St. Omer diligence was stopped by a band of these *larrons*, the ill-fated *voyageurs* being stripped of every thing, even to their upper garments? It was not for him to speak. There was in his house cheer of the very best; every thing comfortable. On the morrow there would be ravishing weather; and if he were in monsieur's place—

There was sound philosophy in what the good host was putting forward; and there was, besides, a snug aspect about his house, even more seducing than his arguments; to say nothing of a certain persuasive savour, as of impending *bouillie* and rich *potages*. But it fell out, unhappily, that I was at that time journeying homewards in hot haste, and could not afford to lose an hour. I must confess, too, I had but slender faith in the robber-legends, holding them as a transparent innkeeper's device for the decoying of weak and timorous souls.

When, then, did this Malle-poste come by?

It would be here in—say about half an hour; at—say six o'clock. The *cuisiniers* would have just time to get ready the divinest little *biftik*, or *oettelette*, with a garnish—say of pistachio-nut, with potato *à la maître-d'hôtel* (ubiquitous, but ever welcome); or, indeed, any thing else that monsieur would please to name. As to wine, a flask of the choicest should be standing before monsieur in rather less than a *clin d'œil*.

Flinty indeed must have been the heart that could have withstood mine host's wistful offer. Though I be-

lieved not in his *biftiks* and pistachio-garnish, no, nor in the acid watery mixture which I knew would shortly figure on the table, I felt as though I had defrauded him of his anticipated prey, and bound in honour to do something for the good of the house. So he went his way rejoicing, and soon was busy with all his household manufacturing the stranger's *biftik*. Such virtue as mine was not to go without its fitting reward. In course of time the *biftik* came up, strangely charred and sodden,—a gristly stringy morsel; and the wine, but for its tint, an admirable substitute for table-vinegar.

In about an hour's time, when I was looking ruefully at the *biftik*, which remained much in the same state as when it came up, I heard the sound of wheels and horses' hoofs clattering over stones outside. Raining over to the window, I saw the Malle-poste coming up in good style to the door. It had grown dark by this time, but I could make out pretty well what kind of vehicle it was: a light *britzka*-like vehicle, with capacious hood and huge springs, with a pair of fiery rough-coated quadrupeds attached, who bore signs of having come this last stage at a headlong pace,—this was the Malle-poste. Seated aloft, with his horses well in hand, was a smart mustached figure,—the driver of the Malle-poste,—now busy cracking his whip and calling to the inhabitants of the inn with melodious *Où! Où!* He could give some account, if called on, of terrific hillside descents, of desperate precipices barely shaved, of runaway beasts with bit between their teeth,—all, perhaps, all within the compass of that last stage. There he sat, chanting fragments of a Poste-song popular among his brethren, cracking his whip *à bras armé*, every now and again calling fiercely and with malediction on *ces gens-là* to come forth. To him presently appeared the overworked being who performed the various duties of *garçon*, ostler, boots, *fille-de-chambre*, and very likely, judging by the day's performance, those of chief cook. He brought a pail of steaming compound for the horses, furnishing, besides, pleasing recreation to the driver on the box, who was skillfully directing strokes of his whip within perilous range of the attendant's person. This I noted from the window, waiting until it should please my host to bring me his little account. But looking further into the depths of that vast hood, I made out something that looked like the shadowy outlines of figures, significant of the presence of fellow-travellers. At the same moment, sounds of excited language, mingled with *sacrés* and such profane adjuration, reached my ear. I stood out upon the top of the stairs to listen. "Are we to stay here all night? What do we wait for; is not every minute precious to me? We must get forward to-night, I tell you. Ten thousand *sacrés*, yes." Host, in mortal fright, was murmuring something about a stranger who was going on that night. "What stranger? Where is he? The Malle-poste is for us, hear you; for us alone." By this time I was standing upon the top of the last flight, and saw in the hall, by the light of a flickering rush-candle held by the host, a figure with coal-black hair and beard gesticulating violently. When he perceived me descending the stairs he became quite calm of a sudden, and taking off his hat, bowed low to the ground.

"Monsieur is to be our *compagnon de voyage*, it seems," he said, in a deep musical voice. "It will enliven our dreary progress wonderfully. Permit me to make myself known to you as M. Poirotte. Madame, who is in the carriage, will be charmed to know you."

I could only reciprocate such truly French approaches by others as gracious, and was being desolated at the bare idea of incommencing madame, when there came to us in clear tones from the box of the Malle-poste, "*Sacré bleu, messieurs!* why do we tarry? These *faguns* of mine are pulling like ten thousand devils!"

"*Allons donc*," said M. Poirotte, making for the door. "After you. O yes, after you."

And at some risk from the capricious movements of the horses, I was with difficulty lifted into the Malle-poste,

and found myself seated safely facing my new fellow-travellers. With a sudden lurch our steeds sprang off, scattering stones and gravel profusely; a hollow concussion, repeated at intervals, signifying that the body of the vehicle had been struck by the hoofs of these spirited animals.

After a few versts or so of journeying, M. Poirotte begged to be allowed the honour of introducing me to madame. I could see nothing of madame's face or figure; but a low voice came forth from the depths of the hood, murmuring some sounds I could not well make out. Presently M. Poirotte grew communicative, and, it must be confessed, very entertaining on sundry passages of his past life, which were of a Bohemian tinge. He had travelled over many lands, and had seen strange countries. In short, before many minutes were over, I was persuaded that I had opposite to me a man of a striking and original turn of mind. It was very different with madame, who remained obstinately retired within the shadows of the great hood, with her white handkerchief covering up her face. She spoke scarcely a word, except in answer to his oft-repeated inquiries—was she cold? would she like more covering? But when M. Poirotte came to dwell enthusiastically on certain fair plains far away in Franconia, where abounded shady bowers and musically-flowing streams, it seemed to me that the handkerchief was agitated curiously, and that hysterical sounds came from the dark clouds where madame lay reclined. Madame was weeping, it was plain. Upon which M. Poirotte became nervous and fidgety, and was for many minutes whispering with vehement utterance, every now and again stamping his foot impatiently.

"Let us go back,—O, let us go back, *mon ami*," I heard her say; "there is yet time."

"It is too late, *ma belle*," whispered hoarsely M. Poirotte, and with something like a laugh.

"O non, non," she continued, leaning forward. "Tell him, monsieur, to stop—to return."

I saw madame drawn back hastily into her dark corner, and could just hear M. Poirotte hissing forth some sharp impetuous words. Upon which she appeared to grow more composed, and to subside into weeping and silent affliction; M. Poirotte meanwhile being busy twisting his moustache and grinding his teeth audibly. I was indebted, however, to these mysterious motions for a hasty glimpse of madame's face, which seemed of a marbly character, with darkest of eyes and eyelashes, and a strangely sorrowful cast all over it; very handsome was madame, if I could put faith in that hurried glance.

From thenceforth M. Poirotte became moody and reserved, keeping up ceaseless thrumming on the carriage-side, and every now and again whispering to his companion. Left thus to myself, I fell into speculation on the two figures before me. What could they be? where were they going? or was it some newly-married pair setting forth upon their travels? Which last conclusion seemed likely enough, since madame by this time had put down her white handkerchief, and was whispering softly; in monsieur's tattoo dying gradually away.

All this while we had been making a species of mad progress up steep hills, down precipitous declivities, being drawn along as it were by wild horses. It was surprising how we bounded across little gullies in the road, over great stones and mounds of mud, without immediate breaking-up and going to pieces of our vehicle, like a ship upon the rocks. Still our conductor sat aloft unshaken, whipping, perhaps scourging, forward his fiery beasts, and contriving somehow to keep all together. Very cheerful, but still perilous, was this mode of travelling by *Malle-poste*. In this fashion we got over many leagues of road, enduring sad concussion all the while, until, at a little past midnight,—or, indeed, it might have been close upon the stroke of one,—we drew near to a small cluster of cottages and farmhouses, which I was told was the village of Aulnoy, and pulled up sharply at the little inn of the place, which bore the name

of the Ardent Conscript. The Ardent Conscript was on the sign-board overhead (in gaudy colouring), swinging to and fro with every breath of air.

Madame could go no farther that night, being very much exhausted and fatigued. Monsieur was for going on at all hazards, as soon as fresh horses could be put to, remonstrating besides in fierce whispers: "It was plain, however, that she was not equal to it, having sunk down at her first entrance upon a sofa altogether *abattue*, as remarked the good-natured landlady. We thought at first she had fainted, and wine was brought; but it was evident that she only wanted rest and refreshment. They had been coming many days without stop, and had travelled over some hundreds of miles, and had good right to be tired. So said M. Poirotte to me confidentially, as we stood in a group round madame upon the sofa, the landlady busy rubbing her forehead with eau-de-cologne and other restoratives. This was by the light of a dull lamp upon the table, which spread a kind of ochre-tinge upon all objects round,—upon madame's marble-like face also.

I turned to M. Poirotte. "What need," said I indiscreetly, "of this headlong express travelling? Have you any particular object in—"

He bowed low, with a kind of sarcastic smile. "I was welcome to many things at his hands," he said, "being good *compagnon de voyage* and agreeable; but there are certain little secrets—monsieur, being man of the world, will readily understand this—which we do not confide to every *premier venu*, or first comer."

I muttered some apology for my rather brusque question, but did not the less speculate on the mystery attending these travellers. Could it be that they had been concerned in some strange secret robbery, some vast fraud, accompanied, perhaps, by some dark deed, and they were now flying with guilty haste from justice? Most unlikely, I thought, after a minute's reflection,—most unlikely.

Madame would go straight to her chamber, which was now ready for her, and so wished us good night. Suppose we,—that is, M. Poirotte and I,—were to sit a little by the fire, with cigar and something warm, for—say one half-hour. It was decidedly dreary turning from the cold carriage into still colder cots. For his part, he always fancied a cigar at bedtime. "Nothing could be more welcome, as far as I was concerned. And so, under guidance of the sleepy *garçon*, we descended the ancient flight of stairs, which creaked unmusically at every step, making progress towards the kitchen, where was to be found the sole fire alive at that early hour. Perilous indeed was the descent, with *garçon* going on before, and giving warning of fearful chasms, recurring periodically at about every third step. At last we found ourselves in a large stone-flagged room, with a great fireplace facing us, and a gallery, which served as a passage between the bedrooms, running across. The fire was burning very low as we entered, and was stirred up by our conductor into a fitful blaze, which showed to us antique strangely shaped bits of furniture, and some black wooden figures looking down from various corners of the room. They might have been saints' effigies, or perhaps images of the *Grand Henri* or *Petit Caporal*; but looking out as they did from darkness, the firelight lighting up with sudden flash some grotesque feature, I felt as though we were sitting in strange company, and should have fancied our host's own private little *salon* in preference.

Two tall high-backed chairs were drawn in to the fire; and *garçon*, having stirred up the smouldering embers into spasmodic life, went his way, leaving us together.

I was little inclined to talk myself, being heartily tired out with the day's journey. It was certainly a curious feeling, finding myself in that lonely cabaret, at long past midnight, stealing every now and then a glance at the black locks and lustrous eyes of the Hebrew countenance near me. By and by M. Poirotte fell into a monologue, going far back into passages of his previous life, which would seem to have been wild and desperate enough. Dark tattigue,

midnight adventure, love, hatred, with one duel à l'outrance, —through such stormy paths had been his course. "Even to this hour," he went on, looking up after the curling smoke of his cigar,—"even to this hour must I follow these troubled ways. What do you suppose has set me down in this wretched cabaret, in company with madame upstairs? Can you guess? You are making for England, so there is little to fear in your knowing it."

A light broke in upon me of a sudden. Could it be that madame had—

"Left her home, husband, children, friends,—all for the sake of the unworthy being who is now speaking."

"I am truly sorry to hear this," I said; "for rash steps bring with them only misfortune and remorse."

"Ay," said M. Poirotte, "I believe so in my heart; and for that matter, so does poor madame. It were better for her had she staid with her gray-haired colonel, a brave man and fond husband."

"But it is not too late," I said very earnestly. "Do take my advice—return at once; and if my good offices can be of any use—"

"Ah, *mon ami*," said M. Poirotte, with a bitter smile, "you know not what manner of man that ancient colonel is. A tall gray warrior, who has seen many battles, and borne scars, full of pride and trust in her. Ah," continued M. Poirotte, writhing uneasily in his chair, "that part of the business I would like to shut out from my eyes. I feel we shall owe many troubled dreams to that gray colonel."

"Goodness!" I said, "if you really think this, in Heaven's name, why not do as I say. I tell you again and again it is not too late."

He shook his head. "No, no; we must go on as we have begun, though I know well his grim figure will haunt me, for the shame of it will kill him."

"Hark!" I said, holding up my finger. There was a jingling sound as of chains outside, with rattling of wheels over stones, and postillion's sharp *Ola! ola!* for some one to come forth. Then came mixed voices and clatter of glass as the door was shut-to.

"More travellers on the road," said M. Poirotte, rising. "O, this weary night-journeying! We ought to be tired, God knows. Some way my head seems full of dismal fancies."

We did not speak for some minutes, but sat looking at the grate, each in a reverie of his own. Presently it seemed that there were sounds of footsteps afar off, in the direction of the gallery, as though some one were approaching. Through the low arched door at the entrance came light, moving unsteadily, displaying against the wall long dwindled shapes of the old crooked rails of the balustrade. It flickered spasmodically, growing brighter every instant; and presently appeared the *garçon*, going on before with a lamp, after whom walked a tall figure, with gray moustache, and wrapped in a military cloak. He passed solemnly across, like something seen in a dream, and was gone in a moment. I scarcely dared to breathe, as I watched the mysterious passage. M. Poirotte had sunk down into his chair and covered up his face with his hands.

"*Mon Dieu*," said he at length, "all, then, is lost! How well I knew it would come to this! And now, to have this other sin upon my head. What is to be done?"

"But," said I, "things are not come to that yet. He does not know that you are here; and if you are gone early in the morning—"

"Ah, what has been his first inquiry, think you? No, no, my good friend, leave me to myself. It were best. Leave me, I conjure you, and I will strive and think of something."

Seeing him so resolved, I did as he desired; and taking in my hand a primitive lamp which was on the table, made my way up the ancient staircase to my room; a small apartment, garnished with old-fashioned cabinets and bits of furniture, quite black and polished with age.

All was now quiet in the house; but in the next room to

me I could hear a ceaseless steady tramp, as though some one were walking up and down; no doubt the gray colonel, wrapped in his cloak, and brooding sorrowfully upon his wrongs. It went on monotonously, that heavy pacing, as though he were keeping guard, until it grew, as it were, into a lullaby, and sent me off in a profound and wearied slumber. Just as my eyes were closing, it seemed to me that his door opened, and that his footsteps died away far down the gallery.

* * * * *

Bright and frosty was the next morning, so bright, that M. Poirotte and Monsieur le Colonel had gone forth together shortly after sunrise. They were old friends, *garçon* believed, laying out breakfast very cheerily. The scenery was fine about Aulnoy, and *voyageurs* came long distances to see it. And madame? Madame was still in her chamber, too tired, he suspected, to go forward. By the way, did I know that the early diligence would come by in about two hours, at, say twelve o'clock? It was strange, certainly, that messieurs had not returned from their walk.

Not quite so strange did it appear to me, who, to say the truth, was filled with heavy foreboding. Some way I was interested in the brave old officer, and could not shut out from myself that mysterious vision of his passage across the gallery, with the light playing on his forehead and gray moustache. Even when I heard the sound of wheels and the clank of chains outside at that late hour, I felt a sort of presentiment, as though some avenging spirit had arrived. Not much relish for breakfast had I that morning.

An hour passed away, then half an hour, when, as I was looking down the road—for the twentieth time perhaps—I saw a horseman spurring hard towards the inn-door. He pulled up quickly and produced a letter from M. le Colonel, directed to madame. M. le Colonel himself would arrive about noon. He had come straight from a small town some ten miles further on, outside which there had been a murderous duel, *sans témoins*. M. Poirotte was at that moment lying under the trees beside the brook quite stiff and stark, being pierced through by M. le Colonel's sword.

As he spoke there was to be seen a cloud of dust at the corner of the road, and a familiar jingling sound, mingled with winding of horns, fell upon our ears. It was the great diligence coming over the hill. The little children came running up from the roadsides, the women stood forth at the cottage-doors to see it halt and change horses, and mine host and his following were busy getting ready anticipated *petites verres* and other refecton. Place was found for me inside the huge mountain; and in a few moments the horn was winding cheerily, and I was rolling along the rough high-road, having left far behind me madame, sitting guiltily in an upper chamber of the Ardent Conscript inn, with no company beyond her letter, with black despair in her heart, and waiting judgment at the hands of her offended husband.

ANAX ANDRON.

"Who can tell me any thing about Michael Angelo?"

"Please, sir, I can. He wanted Moses's body."

Now I do not mean to say that my reader would make such an eccentric blunder as this; nor jumble together the account of the monument of Julius II. and the incident mentioned in the 9th verse of St. Jude's Epistle. Yet I do mean to assert that very little is known by the general reader of one of the greatest names in Italian, or any other annals. Michael Angelo was a sculptor and architect, and built St. Peter's at Rome; he was also a painter, and adorned the ceiling of the Sistine Chapel. All this "every schoolboy knows;" not, indeed, the schoolboy mentioned above, but those omniscient schoolboys with whom we are all acquainted.

And yet Michael Angelo was something more than architect, sculptor, and painter. He was a most genuine poet;

and, best of all, a most true Christian. Shall we try to learn a little of his inner life,—the life that is not shown to us in statues, pictures, and lofty corridors? His history is not so full of romantic incident as that of Luis de Camoens, which we considered some weeks back. He passed through no such stirring adventures, suffered no such evil fortune, as Portugal's hero; yet I doubt not we shall find something to interest us in the long life of this wondrous old man.

The first thing that I notice in Angelo's character is his steadfastness in the belief that he was called to be an artist. Astrologers at his birth had read the story of his future greatness in starry language. Mercury and Venus, in conjunction with Jupiter, were benign of aspect on that memorable 6th March 1474. They betokened that the infant who first saw the light under their beneficent influence should be an extraordinary genius, whose success should be universal, but especially in those arts which delight the sense.

A modern philologist, with more ingenuity than philosophy, has attempted to trace back the word "calling" to the time when tradesmen sate at their shop-doors and bawled out to passers-by the nature of their wares. Now I venture to affirm that "calling" is a very far higher thing than that. It is a voice within a man, and not without,—a voice telling him, "This is thy work, do it." Thus it was, at least with Michael Angelo. He was sent to school; yet the pedagogue was not his schoolmaster. He stole from his books, and gave himself up to painting. He ought to have qualified himself for some learned profession. Yet, in spite of threats and reproaches, spite of lamentations over the degeneracy of a descendant of the Canosse, he listened only to the voice which bade him be an artist. He was thoroughly honest. Once resolved to accomplish any thing, he would work with all his powers of head and hand that it might be fully and perfectly completed. So that whenever we speak of him as a sculptor, think of him as a painter, or write of him as a poet, we are dealing with a master entirely competent, because he had studied much, copied much, thought much, and had altogether been an eminently hard-working man.

I find, moreover, that amid universal praise he never became proud, never degenerated into one of those spoiled children of fortune whose history so often saddens us. He never scorned the advice of others, when kindly given; and would follow it were it given wisely. The story of the laughing faun is too well known to be repeated. It was this readiness to listen to friendly criticism which laid the foundation of his future advancement. Michael Angelo was proud of his profession; however men might speak against him, they should at least respect that. He would not endure that petty hucksters should haggle with the Muses or the Graces.

His biographer, Duppa, relates that a Florentine gentleman, Angelo Doni by name, once gave him an order to paint a Holy Family. When the picture was finished it was sent home, with a note requesting the payment of seventy ducats. Doni did not expect such a charge, and told the messenger he would give forty, which he thought sufficient. Michael Angelo immediately sent back his servant, and demanded his picture or a hundred ducats. Doni, not liking to part with it, returned the messenger, agreeing to pay the original sum; but the artist, indignant at being bargained with, then doubled his first demand; and Doni, still wishing to possess the picture, acceded, rather than try any further experiment to abate the price.

If great men, or rather men in high station, sought Angelo's friendship, they must have it on equal terms. In that age of servile reliance upon lordly patrons, this independence is the more remarkable. Even the most exalted must treat our artist with due respect. Being rudely refused by the groom of the chamber permission to see the Pope, he immediately left the papal territory; and being commanded by Julius to return, he steadily refused, saying, "That being expelled the antechamber of his Holiness, and

conscious of not meriting the disgrace, he had taken the only course left him to pursue consistent with the preservation of that character which had hitherto rendered him worthy of his confidence." It was only after long persuasion that he consented to revisit Rome.

In the year 1529 Michael Angelo comes before us in quite a new character,—in that of a soldier. He was a thorough master of the science of fortification; so that Vauban, and other celebrated engineers, were afterwards greatly indebted to him for much of their scientific knowledge. The republic of Florence was at this time girt about with foes; the Emperor of Germany and the Pope had leagued together for its destruction. The assistance which the Florentines had expected from France Francis was in no condition to afford. In this strait they resolved to fortify their city, and hold it against all attacks. The defence was intrusted to Michael Angelo, who, by his ingenuity and fertility of resource, long time baffled the operations of the adversary.

Indeed the siege, which lasted for nearly a year, was terminated only by the treachery of the captain-general of the besieged, who insisted upon capitulation. Michael Angelo, knowing well the revengeful character of the Pope, hid himself when the city was taken; and it was only under Clement's most solemn assurance of safety that he could be induced to return to Rome.

We have seen that Angelo would not permit any petty chaffering or bargaining for works of art; yet he was by no means avaricious. On more than one occasion he assisted young artists and sculptors by furnishing them with designs. But the crowning act of disinterestedness is connected with the noblest architectural achievement of modern times. For eighteen years he gave up his time to the building of St. Peter's without emolument; and when Paul III. sent him a sum equivalent to forty pounds of our money, for one month's pay, at the commencement of his undertaking, he returned it.

He was attended by an old and faithful servant, Urbino.

"What will become of you, Urbino, if I die?" his master one day asked him.

"I must serve some one else," replied Urbino sorrowfully.

"Poor fellow!" said Michael; "I will take care that you shall not stand in need of another master;" and immediately made him a present of two thousand crowns; an act, as Vasari exclaims, only to be expected from popes and great emperors.

Michael Angelo never married; and yet he had a warm heart. He appears to have been tenderly attached to his father and brother. On the death of the former he has written some very touching lines, of which I quote the few last:—

"Thy death reminds, and teaches me to die,
O happy father! I in thought behold thee
Where the world rarely leads the wayfarer.
Death is not, as some think, the worst of ills
To him whose closing day o'ercalls the first,
Through grace eternal from the mercy-seat.
There, thanks to God! I do believe thee gone,
And hope to see thee, if my reason can
Draw this cold heart from its terrestrial clay.
And if pure love doth find increase in heaven
'Twixt son and father, with increase of virtue,
Rendering all glory to my Maker, there
I shall, with my salvation, share thine too."

Angelo seems for a long time to have been content with art, and to have required no other friend than that. Ever some bright idea floated before him in all its perfect loveliness of form and expression. His constant aim was to transfer this high vision to the canvas or the marble. In one of his poems he says:

"Beauty was given at my birth to serve
As my vocation's faithful exemplar;

* This and the following pieces are taken from Mr. J. E. Taylor's very elegant and scholar-like little work *Michael Angelo considered as a Philosophic Poet*.

The light and mirror of two sister arts:
Who otherwise believes in judgment errs.
She alone lifts the eyes up to that height
For which I strive—to sculpture and to paint."

Thus dealing with abstractions, and ennobling them into realities, Angelo passed sixty-four years of his life. At that time, i. e. in 1537, he formed an acquaintance with one of the best and most highly-gifted women that has ever subdued all hearts.

Vittoria Colonna had won a proud name in her country's annals. The daughter of one brave general, the wife of another still more illustrious, whose career of victory had been cut short by an untimely death, she herself renowned for beauty, wit, and intellect of the highest order; but known best of all as the true and most constant wife of him whom she had loved so well while in this life, and whose memory she still cherished, whose deeds of valour she still sang, now that he had left her in widowhood.

In Vittoria Angelo saw embodied his very highest ideal. With a face still of perfect loveliness, though long years and many tears had changed its expression of unclouded happiness into a touching sadness, with a heart chastened by deep sorrow, it is not wonderful that Angelo, with his lofty spiritual sense of beauty should thus speak of her:

"I can no image figure to myself
Of naked shadow, or of earthly cast,
With highest thought, such that my ardent might
Therewith against thy beauty arm itself.
Parted from thee, I seem to all so low,
My heart of every power is bereft."

It was at Rome that poetess and artist first met. Angelo's regard for Vittoria was that of reverence as for some glorified being. His earnest prayer was, that he might not be left to mourn her loss whenever she should depart to everlasting rest.

The prayer was not granted. In 1547, that is, ten years after the commencement of their friendship, Vittoria was taken seriously ill at the convent whither she had retired. From thence she was moved to the palace of Giuliano Cesarini. She rapidly grew worse. On the 15th February she made her will; and soon after her gentle spirit rejoined the spirit of him whom she had so long loved, and from whom she had been so long severed.

During the last moments of her life Michael Angelo came to her bedside, and taking the hand now well-nigh cold, reverentially pressed it to his lips. Afterwards he grieved that he had not kissed her cheek, since this, he said, was the last time that he was ever to gaze upon her face.

The great sculptor mourned long and deeply. He had felt that it was his duty to love this pure-hearted lady. Of her he might most truly say, in modern words:

"So with the world thy gentle ways,
Thy grace, thy more than beauty,
Shall be a theme of endless praise,
And love—a simple duty."

But Angelo was growing old apace. Already, when he first mourned his departed friend, more than threescore years and ten had silvered his hair and ploughed deep furrows on that massive brow.

What a life his had been! How much he had thought, how much brought to perfection! Yet though his name called forth praise from every tongue, this noble-hearted man, noble in his humility, mourns his unprofitableness, entreates pardon for all that has been done amiss; says, .

"My weak, infirm, and tottering powers,
Wearied of error, do for pardon cry."

When Angelo was eighty-two years old his faithful servant Urbino was seized with his last illness. The master now became the attendant, and waited upon him as he wanted. What a study for an artist; what a bright example for a moralist! Picture to yourself this "king of men," crowned with honours, and now bending under the weight of more than fourscore winters; fancy him watching by the bedside

of his aged servant, leaving him not night nor day, and "at length closing the eyes that death had darkened! There is something sublime in this devotion,—sublime in its very simplicity.

Shortly after this Angelo wrote to Vasari, who has left us those inimitable lives of the painters:

"MY DEAR GIORGIO.—I am but ill-disposed to write; however I will sit down to answer yours. You already know that Urbino is dead. His death has been a heavy loss to me, and the cause of overwhelming grief. . . . He lived with me twenty-six years, grew rich in my service, and I found him a most rare and faithful servant; and now that I calculated upon his being the staff and repose of my old age, he is taken away, and has left me only the hope of seeing him again in Paradise."

Seven years more were to pass before Michael Angelo should behold again those whom he had best loved. In February 1563, he was attacked by a slow fever. He sent for his nephew; but as that relative did not arrive in time, the dying man called together his physicians and attendants, and made this short verbal will: "My soul I resign to God, my body to the earth, and my worldly possessions to my nearest of kin." Soon after Michael Angelo slept his last sleep,—February 17th, 1563,—he being then eighty-nine years of age all but fifteen days.

On the 20th his funeral took place; and his remains were deposited in the Church of St. Apostoli at Rome. But the Florentines claimed that his bones should rest in their city. The request was granted, and the body was removed to Florence. There, soon after, the obsequies were again performed; and amid tears and sighs, and the solemn strains of the mass for the dead, the dust of Italy's noblest son was finally committed to the ground by the altar in the Church of Santa Croce. E. SPENDER.

"TOM!"

"What's in a name? A rose by any other name would smell as sweet." I'm not quite sure about that; your patronymic is not so immaterial, my reader, don't fancy. There is a large family of the Smiths; next to the Joneses, they are the largest family in the United Kingdom. As to the John Smiths, they are Legion. All you have to do, if you go into a church in a strange town, is, to ask the beadle or pew-opener to put you into Mr. John Smith's pew, and then to one during the service you will rub your shoulders against an alderman. They are an enterprising, go-a-head, wide-awake, pushing family; the Smiths. You hear of Lady Smythe's ball (*Smythe*, my reader, be informed, is the polite of Smith), of the seminary conducted by the Misses Smith, of poems by S. (of course S. stands for Smith). Then you have the Right-Reverend-Father-in-God Smith, Smith, Q. C., the Honourable Smith, Lord-Lieutenant Smith, Doctor Smith, General Smith, Admiral Smith, Smith the lawyer, Smith the mayor, Smith the banker; and, if you will notice that linen-draper's shop, with printed cottons hanging out of every window, and with placards headed, "General Election!" "War with China!" "£50,000 reward!" &c., a hundred to one that shop belongs to a Smith. But this is neither here nor there; a volume might be written about the Smiths. The point I aim at is, to show what is in a name; for, as sure as you are alive, fifty out of every hundred would sacrifice ten years of their lives (presuming they had twenty to live) to exchange their plebeian cognomen for something that smacked of the aristocratic. Now how can any man with the least breeding in him, with the slightest pretension to being something or somebody, say that he would not prefer Mountsorrel, Mauleverer, Fitzgerald, Fortescue, Wilmington, or other high-sounding surnames, to the vulgar Smith? It is ridiculous to think of such a thing; there is not such a stupid antiquated being in the world.

This, patient reader, is a short argument prior to my introducing to you the gallant and romantic, highly-civilised

and anti-heathen name of "Tom." Talk about the "wisdom of our ancestors!"—I glory in the *wisdom* of mine, who dubbed their charming and precocious brat the euphonious "Tom." It is, if you please (your humble servant, of course, excepted), synonymous with all that is rollicking, dashing, brilliant, generous, and brave. They are the first in your galaxy of heroes, true "hearts of oak," Englishmen to the backbone. Of such stuff are the "Toms" made, that the success of any enterprise is doubtful without them. They are the young "bloods" who make your country's fame, who plant your colours on the bloody Alina, who first entered the Redan in Sebastopol; who by tact and prompt action give such a triumphant turn to events, that the prestige of Great Britain will never be at stake while the vigour and energy of the "Toms" remain unimpaired. Instances of undaunted skill, and of unparalleled bravery and courage abound. One of your first generals was Sir Thomas Picton. There was a "Tom" for you!—a "Tom" all over. So overawed were the French at his "fighting brigade," that Wellington placed it in the most conspicuous position at Waterloo, and gloriously it maintained its ancient valour. That great captain knew well what it was to have a "Tom" like Picton at his right hand. Because of his intrepidity and soldier-like qualities, his men loved him as they loved their father. He was the Hotspur of the Peninsular war. There was nothing of the feather-bed and lavender-water prowess about him. As he galloped past his troops to give the charge, his eye flaming with the genius of victory, the bronzed veterans in the lines were electrified at his voice: "*Now, boys, show those blackguards how English bull-dogs can bite!*" And have we not recently seen the courage and heroism of another "Tom" at the Battle of Inkerman, who, having both his legs shot off, mounted one of his own guns, and continued to command and fight until exhausted by loss of blood? I never hear his name mentioned without calling to mind a notable hero in *Cherry Chase*:

"For Witherington I needs must wail,
As one in doleful dumps,
For when his legs were smitten off,
He fought upon his stumps."

We all remember another "Tom," a brave old ex-chancellor, whose head, glorious with gray hairs, was bespattered with its own gore to gratify the caprices of a despot. And who, when he sees those three golden balls (the armorial bearings of the Lombards), which pawnbrokers use as the ensign of their shops, thinks of that noble and magnanimous man Sir Thomas Gresham, who drove from the country those extortionate usurers who for years had robbed the Crown, and plundered his fellow-citizens? As you tread beneath the roof of the Royal Exchange, how many remember his princely gift to the nation of the first "Exchange," the foundation-stone of which he laid with his own hands in 1565? Passing on, we meet with another "Tom," who in his day was no mean authority as a philosopher and metaphysician—Thomas Hobbes of Malmesbury. And fragrant to the memory is the recollection of that pure-minded judge,—a philosopher, a lawyer, a dramatist, and poet combined,—who, on delivering his charge on the bench at Stafford, yielded up his benevolent spirit to the mandate of a higher judge,—the Judge of all the earth?

Glorious in the annals of poetry, "the pet of the first gentleman in Europe," our catalogue is graced by another "Tom" (his boasted *sobriquet*), the author of *Lalla Rookh*. To his strains the most delicate natures in the globe responded with their lyres. In the mud-cabins of the "finest pisantry on airth," and amidst the luxuries of the most gorgeous harems of the Orient, his songs were echoed, and his productions welcomed with enthusiastic acclamations.

And, alas for the fame of England, alas for the untimely departure of one mighty spirit,—

"The wondrous youth of Bristowe's plain,
That pour'd in Rowley's garb his solemn strain."

Had his resplendent talents been fostered by the assumed

guardians of literature, instead of blasted and blighted by their remorseless spleen, who can predict the miraculous attainments his daring intellect would have achieved? If ever it was permitted human genius to scale the highest peak of Parnassus, that grandeur and dignity was reserved for Thomas Chatterton.

And scarcely is the turf green upon the grave of poor Tom Hood, who at one time would make your sides crack with laughing over his *Annals*, and at another draw copious tears from your eyes by his matchless pathos. In many a dismal garret, in many a lordly mansion, by senipstress and popinjay, he is remembered, whose tablet bears the one memento,—"*He sang the Song of the Shirt!*"

Time would fail me to enumerate instances of the universal good-nature, courage, achievements, and immortality of those who boast this envied appellation.

This distinction, too, is universally acknowledged. If you have read *The Wreck of the Waterwitch*, from the *Log of an Old Sailor*, you will remember that the hero of the production is our friend "Tom."

In perusing the *Lady Amaranthe Golightly's Memoirs of the Court of George the Fourth*, you will find that she alludes in very happy terms to a well-known "Tom," the very handwriting of the family generally.

Dramatists, tragedians, writers of pantomimes, it is to be observed, are sure, if they wish for the applause of the gods, to introduce a "Tom."

Mothers, by all means, and whom you christen "Tom." The name has now a very respectable celebrity; it would be the death of all of us old "Toms" if you were to call any thickheaded, mulish, hoggish, fretful, malicious archin by the sacred name of "Tom." Study physiognomy well; and if your hopeful has a clear complexion, a smiling face, twinkling, wicked, mischievous, eyes,—if he has a good set of teeth, and tolerable craniological developments,—if he has those little, knowing, old-fashioned ways about him,—you understand (they are the marks of a genuine "Tom")—by the duties you owe to society, to your country, and to your child, I implore you let him—let him be called "Tom."

POLYGLOT READINGS IN PROVERBS.

FINE FEATHERS MAKE FINE BIRDS. In other words, "No woman is ugly when she is dressed" (Span.).—*Compuesta no hay muger fea*; at least she is not so in her own opinion. "The swarthy woman dressed up fine speaks scornfully of the fair one" (Span.).—*Baza compuesta la blanca de nuega*.

W. K. KELLY.

WAR TO THE GARDEN DEPREDATORS.

THE fall of the year is the heyday of all garden-pests. The last crop of caterpillars converts the cabbage-leaves into colanders; the slugs and snails, rejoicing in the autumn-rains, eat up the late-sown lettuces; and the dahlias are infested with their inveterate foe the earwig. The vigilant gardener keeps a look-out at all seasons for his enemies; but autumn and spring are the seasons when they are most to be feared, and when war against them should be waged most fiercely. As this is the season when the earwig is the chief enemy, it may be useful to many beginners if I here enumerate a few of the best plans for ridding the garden of them, and especially of saving the late blooms

of the dahlias; and this naturally brings me to notice a new and valuable invention called "Edwards's Earwig Trap."

No one with the slightest pretensions to purity of taste can look on a bed of dahlias without wishing the earwigs at Bath or Jericho, or any other of those places which we select for banished enemies. Not because his destructive efforts are visible at first sight, but because the dahlia-grower resorts to such queer ways of trapping him. There, in the midst of graceful vegetable forms, you see a regiment of tall grenadiers,—a very awkward squad,—whose duty it is to guard the flowers, and take prisoners those midnight marauders that annoy them. We see lobster-claws, crab-shells, kettle-spouts, inverted flower-pots, and a hundred other ugly monsters mounted on stakes so as to be very visible; and utility is compelled to sanction such monsters in the very hall of Flora. Years ago I said in the *Town Garden*, "I would have my whole garden devoured by a swarm of locusts rather than abuse my neighbours and render myself miserable by the spectacle of these scarecrow vermin-traps, so frequently set up by London dahlia-growers in the midst of their fine plants, as if the two extremes of ugliness and beauty were to stand side by side. Do not, my dear reader, fix the death's-head and cross-bones in the centre of your bright-coloured flowery banner." Now I repeat this, and have the good fortune of being able to recommend a substitute, which in appearance is graceful, and in use the most effective of any contrivance ever hit upon for the extermination of the marauders.

Edwards's Earwig Trap is figured above. Fig. 1 represents its external appearance; it is made of iron, japanned, and its colour a dark olive-green; it is three inches in diameter at bottom, and four inches high. In fig. 2 the inner construction is shown. A is a fluted cone, open at top and bottom. B is another cone of plain metal, joined to the top of the cone A, but having a wider base, so that there is a clear space, about half an inch wide, between the cone A and the cone B. C is a third cone, joined to the top of the others, but spreading at the bottom, so as to leave about half an inch space between it and the middle cone B. D is the outer case, fitting closely round the base of the cone A. E is a movable lid or cover.

In using the trap, the training-stick is placed inside the cone A; the projecting portions of the flutes hold the stick tightly, and there are spaces for the insects to crawl up; a little coarse sugar is placed inside the trap. The insects enter the trap through the opening at the top of the cones, and passing down the outside of the cone C, drop on to the bottom of the case D. They are now effectually imprisoned; for there is no other outlet than the hole by which they entered, to reach which they must traverse the whole up-and-down route indicated by the dotted lines and arrows in fig. 2, besides which they will have to turn the sharp angles at the bottom of the cones; a process almost impossible to them from the peculiar construction of their bodies, the legs being all at one end, and the chief weight at the other.

Here, then, is a certain means of ridding dahlias of their most inveterate enemies. The efficiency of the invention may be judged from the fact, that such flor-

FIG. 1

FIG. 2

ists as Mr. Turner, Mr. Keynes, and other of the most celebrated dahlia-growers in England, trust entirely to them for trapping these abominable vermin. Mr. Edwards says, that "as many as sixty earwigs have been caught in one trap in a single night." It should be added that their appearance is ornamental, and being japanned of a neutral green, they do not obtrude upon the eye as all other objects do that are used for the same purpose. They may be obtained of the inventor, Mr. E. Edwards, St. Paul's Square, Birmingham.

Mr. Edwards is also the inventor of the Crystal Flower-sticks, which are elegant supports for flowers in pots.

In the absence of proper traps, earwigs may be trapped by means of dry bean-stalks, cut into six-inch lengths, and thrust in among the stems of the plants. The stems of the *Heracleum*—a plant now much grown—make admirable traps, when cut up and stopped at one end with a few leaves; and these are so durable that they may be dried, painted, and preserved for years. The insects will enter any dark and dry retreat; and whatever trap may be used should be examined every morning, and the prisoners blown out into hot water.

Slugs and snails are every where submitted to with extraordinary complacency, as foes that are not to be conquered. But I will maintain it, that the oldest garden, if literally eaten up and wholly possessed by them, may be cleared in one season, if a vigilant system of trapping be adopted. A few cabbage-leaves, laid in a heap and moistened in the evening with water, will be found early next morning to be covered with them. A few brewer's grains, laid in heaps near their quarters, will trap them by dozens; and so will half-decayed rubbish of any kind, for they prefer garbage to fresh food. Now that the gardens are being cleared of much herbaceous refuse, these nocturnal devastators may be destroyed by wholesale, if the rubbish is laid in small heaps and kept moist, and examined regularly every morning, as soon after daybreak as possible. I have of late years had to do with an old hedge that swarmed with snails, and I used to sow three crops of lettuce to get one, but by having the hedge cut in and cleared, and the rotten pieces of fence removed, I have in one season subdued the enemy, and positively have to look sharp to find such a thing as a slug any where. The same with the wire-worm, that made havoc with every thing; I trapped them by dozens with slices of carrot buried just under the soil, and it is rarely that I see traces of them now.

Other pests common to autumn are those parasitic growths which the moist weather induces on the soil and on the plants. Mould on stems and leaves may be destroyed by a dusting of sulphur; but fresh air and sunshine are the grand preventives of all such things. Let the soil in pots be stirred once a fortnight, to prevent the surface getting sour and mossy. Loosen the soil about the bedding plants, and make preparations at once for potting-off and housing whatever is unable to stand the winter; and while you get your pots looked out and washed, and your composts made up, I will pen a few hints for your guidance that shall appear in time to be useful when the curtain falls on the summer glories of the garden, and the greenhouse stock will require nursing again.

SHIRLEY HINBERD.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XVIII.

PAINTED BY ROBERT CARRICK.

THOUGHTS OF THE FUTURE.

THOUGHTS OF THE FUTURE.

By ROBERT CARRICK.

THERE were few pictures in the recently closed exhibition of the Royal Academy which attracted more attention and admiration than that from which our engraving is taken,—the work of a young man of whom little was previously known. It was recognised as containing qualities which mark the artist as a thoughtful man, of whom much may be expected; and as a skilful executant, whose technical ability is sufficient adequately to represent his ideas and feelings of homely subjects. Its genuine homeliness augurs well of his possessing that sincerity and modesty of feeling so very rare in the painters of *genre* subjects; for how few such there are wherein we do not observe some affectations and attitudinising, utterly out of keeping with the simplicity which should distinguish all works that depend for their interest upon the representation of domestic incident! So common are these pictorial follies, that no one would be surprised to meet with such a subject as a servant-girl beating a mat with a grace like that which the writers of the time of Queen Anne delighted in attributing to Virgil; who, they would have it, was remarkable for the "air" with which he loaded a dung-cart! How different from all this is the attitude of the young mother, seated on the bed of her child, and building for him "castles in the air," seeing in the future time deep vistas of happiness and honour, down which he paces, her protector, her thanksgiving, and her pride! If we judged by her face, the world-path she has chosen for him is no high one; he is to be no great man, no conqueror or leader of others, but rather the fulfilment of her idea of a good man: a life calm and beneficent, happy in its progress, and happy in its close. She sees herself in future years, bending under Time's hand, tottering and feeble; he walking by her, strong and handsome (what woman's son should not be handsome?), her stay then as she now is his. A lowly and a peaceful life and death for her and him; clearly no high-handed domineering man to rise from that humble bed: "Rather let him be good, O God!" prays she.

If the reader agree with us in these fancies, or will weave others for himself, he cannot fail to think how much of the true end of painting may be found in this work; he will, moreover, recognise how great a thing is that art which can not only suggest such thoughts, but actually bring the scene before our eyes in palpable presentment, with all its tenderness of expression and reality of natural effect.

The artistic merits of this picture are most noticeable in its being so singularly well studied and thoughtfully perfected from nature by careful elaboration in the details. The excellent manner in which the shadow on the wall behind the bed is rendered, with its perfect truth of effect, having a large amount of accidental light sent back upon it from the walls and floor, will not fail to attract the observer. This quality is also observable in the execution of the end of the pillow, the rendering of light upon which is a very beautiful piece of study; it is to be noticed how softly and broadly, yet powerfully, the whole chiaroscuro of this portion of the picture is given, being quite brilliant and luminous with its exceeding variety of light, shade, and reflection. The broad folds of the mother's dress are most scientifically and thoughtfully mastered and rendered; indeed, we scarcely remember to have seen a work in which more judgment of this kind had been displayed. The varieties of texture throughout are admirably depicted, as the reader will observe, by comparing the skilful drawing of the folds in the different fabrics, as the mother's dress and the heavy counterpane, with the thin and sharp forms of the gathering-in of the pillow-case.

The production of such a work as this would be an honour to any one, and as coming from a young painter, it is full of promise for the future.

L. L.

CURIOSITIES OF THE "CONTEMPORARIES."

FOR some time back an ingenious Frenchman has been busy winnowing the jivelier portions of his neighbours' lives, and furnishing such nourishment periodically to the public. He casts about him diligently for such floating legends touching authors and artists as may have gone round the *salons* ages since, sprinkling over his work a few piquant and salty details to add flavouring. He has all prettily printed by M. Havard, of the Rue Guénégaud, dresses it out with bright yellow wrapper and steel-plate effigies of the victims, and so serves up a very appetising little *plat*, at the humble charge of one half-franc, or five-pence of our money. These histories are all so many *chroniques scandaleuses*, and have been welcomed with delight by all who love the stirrings of such unwholesome waters. Some of the subjects,—their very names holding out abundant promise of entertainment,—have had a prodigious success. Thus Monsieur Alexandre Dumas the son has rushed through no less than six editions; while Dumas the elder, with Jules Janin, Madame Sand, Rose Chéri, and many more, have all enjoyed a certain tide of popularity. From his little factory in the Rue Guénégaud has M. de Mirecourt—for such is the name of the ingenious Frenchman—turned out hebdomadally over one hundred of these little chronicles; some a little *scabreuses*, as our neighbours phrase it, but forming on the whole a body of very curious and entertaining reading. Here are gathered as in a gallery artists, actors, musicians, *hommes de lettres*, *publicistes*, &c., as set forth on the face of the little yellow books. All are in a manner pilloried for our delectation; and the scalpel is used dexterously but unsparingly; every slip, every speck and blunder being brought out in happy relief. In this fashion are anatomised, besides those above mentioned, Rachel, Paul de Kock, Balzac, Sue, Girardin, Hugo, Veron, and poor Rosa Bonheur, who must be brought away from her Highland sketching and patient horned beasts, to figure in this singular apotheosis. The last submitted to the process has been no less a person than the erratic Lola; and the dissection of that famous lady has, as might be expected, been attended with marvellous success and profit. But it has not yet gone abroad, the publication being so recent, whether the lively countess has pleased to endorse on De Mirecourt's person this flattering *accueil* of his humble efforts. How grateful would be such delineations on our own side of the Channel; how refreshing such free portrait-painting, such peeping behind screens and into skeleton closets! But the interior life of our *hommes de lettres*, *publicistes*, &c., would seem to promise but dull entertainment, and lack the piquancy and flavour belonging to that of their Gallic brethren. The great caustic novelist would cut up tamely beside the ingenious creator of the frail and fair ones so partial to camellias and to pearls. His life and adventures would read humdrum compared with the *bonnes fortunes* of young and sparkling authors. Perhaps one day De Mirecourt may take the work in hand himself, and indulge us with an English series; but, alack, for the cruel shackles upon the press, and villanous *ex-post-facto* censorship, taking shape as a criminal information—terrible engine, which has been before now worked by Mr. Attorney-General specially. It were wisest, perhaps, to bring over Havard in person; or, better still, keep within the safe precincts of No. 15 Rue Guénégaud.

But curious to say, *messieurs les hommes de lettres*, *publicistes*, &c., have not entered with the enthusiasm that might be expected into De Mirecourt's views. They objected, unreasonably perhaps, to the very frankness of these disclosures,—to having their early indiscretions, the last *mot* made at his or her expense in the privacy of a select *salon*, given with this charming candour to the world,—and strangely enough, proceed to remonstrances in courts of law and elsewhere. The results of such proceedings have been unhappily disastrous for the interest of biography. M. Mirés,

a great capitalist and speculator, was perverse enough to remonstrate—in legal form, that is; so was M. de Girardin, so was M. Dumas the elder, so was M. Gustave Planché. M. de Mirecourt has been cast in many actions, and mulcted in heavy damages. Stern lawyers have made descent upon the Havard publishing premises, and seized whole impressions of the little yellow volumes. M. Samson was so spoliated—M. de Mirecourt's Samson, that is; M. Mirés experienced similar treatment. Sad to say, profane hands have been laid on the biographer's person, which has been borne off violently to Ste. Pelagie, and other strong places, there to lie for many quarters.

Still has the undaunted chronicler contrived to hold on his way, sending forth up to this present hour his little stream of piquant scandal and unique particulars. The journals have been thundering; critics and *feuilletonists*, bleeding and stricken sorely, have denounced this free lance to the four quarters of the empire. The work still goes bravely on, the little histories come out weekly as before; and M. de Mirecourt now promises, in addition, a journal wherein he may more conveniently do battle with his opponents; having, as he says, abundance of loose sheets and stray facts lying in his portfolio, infinitely curious and not made use of in previous biographies. These shall all see the light in the new journal. Havard has been disposing of his little yellow volumes by tens of thousands, and M. de Mirecourt, it is whispered, has reaped huge profits. There is certainly something seductive in their very aspect. The portraits are spirited, and have the air of likenesses; the type is brilliant, paper unexceptionable; the whole wooing irresistibly to binding speculations.

Under the circumstances, it is only natural that M. de Mirecourt's relations with his brethren should not be of the most harmonious character. At this present moment every man's hand is lifted against him; he is in a manner interdicted from fire and water. It is a combat *acharné*,—war to the knife. Through the medium of certain bulletins prefixed occasionally to the chronicles, we are made acquainted with the stages of the contest, and how it is faring with the combatants. They take occasionally a dramatic air, telling at one time how at that precise instant,—say four o'clock, p.m.—two law myrmidons have effected forcible entrance, and are busy below packing up for removal the whole impression of a particular *publiciste*, or *homme de lettres*; or that a gaoler had just paid him a visit in his prison of Clichy, bearing him word that the doors were open, and that he was free from durance. Here, too, in this *Chronique des Contemporains*, as he calls it, are given the smart shafts that are prelude to the fray, the letters and retorts, with De Mirecourt's cool criticism on the same. All are curious, and certainly a little astonishing; but especially so are his encounters with the greater leviathans, his duels with Alexander the prolific and Janin the *feuilleton* king. He had taken the latter in hand, and dealt with him very summarily, his sketch of the author of the *Dead Ass* being rubbed in with a startling personality and freedom of hand.

It seems that there has been a notion abroad that the great Janin is not wholly removed from little weaknesses of vanity, and partiality in the distribution of his praise and censure.

"You must fondle him," says the little yellow history, "and pet and coax the creature, and burn under his nostrils the incense of sweet flattery. You must scratch the poll of this parrot, which hops once in the week upon the perch of the *Débats*. Be sure to tell it that it is a little pet and a pretty thing, and has a beautiful bill and lovely plumage. Never insinuate that it has but the one tune for every Monday."

But if you neglect these delicate attentions, and are not ready to lay yourself flat upon the ground before this Grand Lama of the *coulisses*, you are utterly lost. Say good-by at once to fame and glory, not one ray of which will ever light upon your unlucky head. If you have only forgotten to uncover as he goes by, make up your mind to lie for ever in that dull limbo to which he consigns every genius that refuses to bend low before his round and majestic figure.

Ah, take it or leave it, Jules will tell you. 'Just listen to

my profession of faith. I do criticism, and must turn a penny by it. Then why complain? Do I put my hands in your pockets? No, thank God. But you will see me lurking, like some bandit, in a dark corner of the *Débats*, pen in hand and my words well charged with grape, ready to rifle managers, and levy blackmail on authors; stopping poor authors on the road, and making them give up their money or their life. O, keep your money by all means, gentlemen—but, good day to you, morbleu—that's all!"

M. Janin was blessed at one period of his life with an exemplary aunt, who supported him at her own proper charges for many years; which circumstance enables M. de Mirecourt to add a happily conceived note of the form suggestive. "It has been said," the note observes, "that she died utterly abandoned, without food or fire. This must be impossible. Janin could not have been so ungrateful towards the devoted friend of his infancy, to the benefactress who gave him her heart's blood even, who lodged, fed, and supported him through all his youth and early efforts."

So far M. de Mirecourt on the writer of the *Dead Ass*. But retribution will come presently, and the *feuilleton* king is already sharpening his tools for work. On the twenty-fifth day of December—a curious Christmas morning's entertainment by the way—he puts forth from that dark corner of the *Débats* the following smart *riposte*:

"Happy indeed are all you artists," says Janin, taking for his text the premature death of a certain young actress of the *Français*, "whom the poet glorifies with his poetry, the painter with his colours, the whole city with its applause. Happy *artistes* indeed! Their every word is caught up, their features reproduced in a hundred shapes—by the burin, by the sun. If they fall sick, their illness is told to every fresh comer; and if they die, what deep regrets, what grief!"

All this while there are others, followers of the spoken or written word, who become the spoil of some wretched pamphleteer, preying upon their very lives. For such there is no hope of rest or mercy. There is a ruffian lying in wait for them hard by the Forest of Bondy—waiting with a poniard in his hand to strike them in the dark; who, when he sees them lying bleeding, flies with his bloody knife, which for the next eight days will serve him to cut the morsel of bread this glorious exploit has earned for him. At the end of that time he wipes his knife, and skulks back to the same spot to wait for another victim. He will strike him too, and then return exulting to his den, until some day one of the victims, in ripe humour for vengeance, shall have killed the creature with a kick in that part of the person *où le dos change de nom*, to use M. Tousez's phrase."

These are good set terms; but it will be noted that M. Janin has stolen that great bandit metaphor from his enemy, heightening it, however, with forcible details, much in the Callot or Ribera manner. There must have been high jubilee that Christmas morning among all good Janinists; the piratical craft being utterly shattered and gone for ever, and Jules the glorious triumphant. But within a very short span comes forth again the rover from his creek, refitted with sails set and colours flying, and pours a broadside into his enemy. After all, that wholesome counsel of avoiding encounter with certain sooty professionals, on the score of defeat or victory being equally fatal to cleanliness of person, suggests itself with singular force in this battle of M. Janin's; triumphant or prostrate, the result would be much the same to him. It is worth while hearkening again to the bold De Mirecourt returning fresh and vigorous to the fray.

"A sweet bit of Old Bailey eloquence," he begins. "But thou, mighty theatrical prosecutor! your quotation from Tousez is not happy. The man who attacks you boldly, face to face, brigand or biographer, since it pleases you to couple the two professions, can be struck himself only in the face."

You are dreaming, Janin, or else your rage makes your head wander.

The kick you speak of—no one knows it so well as you—is only administered to harlequins and pierrots in that particular locality. . . . But have no apprehensions. We have no idea of challenging you. You are not a man, only a magpie,—something that screams and chatters, and then flies off.

Who ever thinks of fighting with a bird? But you know well, Janin, we have let you off very easily. What piquant details we might have presented to our readers, had we been so minded! See—here are at least twenty letters upon our desk,

all accusing us of having left out an infinity of precious facts, all essential for a true picture of your life. Let us look through this correspondence together.

'Why,' writes one, 'not have mentioned Janin's macaw—that superb creature with its long tail, who disturbs all the neighbourhood with its cries? It is the very pendant of his master in his books. Why not tell us of his rage for old books, out of which, by the way, he picks all his learning? His love for handsome copies of his own works, which he has got expressly printed for himself on Dutch paper? When he wants to put his father-in-law, Huet, in a rage, he brings him off to a sale at the Salle Sylvestre, and bids up the first old lot that offers to an extravagant price. You have also forgotten to tell us how Mdlle. G— used to employ a man to follow the great critic every where, and make out a daily report of all his sayings and doings. One day Janin took the spy by the collar, and made him confess all. He was getting three francs a-day for this nice duty. "Hark you," said Janin, "you shall have six, but I myself shall write the reports." It was agreed; and from that time Janin set down to his own account the most extravagant exploits.' This letter, signor critic, comes from one of your most intimate friends! O friends, friends! they are more to be dreaded than poor biographers. Says another: 'Sir, your sketch of Janin pains me exceedingly. What! not a single word of Ricourt—poor Ricourt! It cannot be in the nature of things that you have never heard of that singular character. . . . Are you not aware that it was Ricourt—no other than Ricourt—that made Janin, made Raehol, *invented* Ponsard, and a host of others? Alack, what criticisms has not Janin written, without having ever seen the pieces, solely on the report of Ricourt! If a noble thought has ever strayed from Janin's pen, depend upon it it belongs to Ricourt. For years back has he been Janin's henchman and prompter.' To this, Janin, is attached a signature which would make you start. So we would advise you to keep silent for the future. Never allude to knives, or blood, or to wretches flying at men's throats. It is you that handle the knife every Monday morning. It is you who lie in wait for writers outside the Forest of Bondy, in that *feuilleton* of yours. There you find occupation in tearing to pieces their glory and their talents. For the last thirty years you have been spreading on your bread their fair fame and honest pride.'

It will be observed what additional power the famous bandit metaphor has gathered since its last appearance. But it will be heard of again before long, reappearing heightened with even stronger charnel-house imagery. On one other Monday morning, M. Janin steps forth from his Forest of Bondy, and salutes M. de Mirecourt rhythmically as a man

"Sans foi ni loi,
Sans feu ni lieu,"

as a low rascal; in short, the born image of those Cartouches of the quill who fasten on respectable men to levy black mail, or else fatally blacken their characters. Then fetching out another morbid image—fit pendant to that of the bread and bloody knife—he thus despatches his enemy finally:

"At the end of all," says he, "being utterly worn out, covered with shame and contempt, exposed to the rain and winds of heaven, he *steals a rope*, and hangs himself from a beam in his own barn. In eight days' time the body is heard to fall to the ground from decomposition; and from sanitary reasons rather than from pity a scrap of winding-sheet is thrown over it."

The incident of the rope is quite akin to Doctor Samuel Johnson's rejoinder to a certain water-party on the Thames, reflecting so severely on one of that water-party's nearest female relations. So stands this very pretty quarrel, with whispered rumour of M. Janin's clinching his argument unhand somely by appeal to the tribunals.

This way it was that the biographer fell out with M. Alexandre Dumas. It came to pass some ten or twelve years ago, when that ingenious writer was working at double and treble tides, busily spinning fiction for those great journals the *Siecle*, the *Presse*, the *Débats*, and many more, working so diligently that in the year 1845 alone, over sixty printed volumes were turned out of that strange workshop. It came to pass, then, that some prying soul bothered him of a calculation. Thé-prying soul was M. de Mirecourt, and his calculation simply this: It is certain that the most skillful copyist in the world, working steadily for twelve hours in the day, can barely finish sixty ordinary

pages of print, that being at the rate of five octavo volumes in the month, and sixty in the year; supposing always the unhappy scribe to be in a manner writing for his life, not halting for a single second. Now the world may take it for granted that M. Alexandre must have had other occupation besides romance-writing. There were his plays, visits, amusements, and *petits soupers*, to say nothing of the famous fusil and the great toy-house, or Monte Christo Castle. For these, one half at least of the twelve hours must be set aside, leaving thirty volumes for the modest product of the year's labour; still supposing it calligraphy pure and simple, sheer hodman's work, wrought *au grand galop*.

Having so happy a text, M. de Mirecourt proceeded with all speed to bury the hatchet, and sent forth presently a little book bearing title *The Firm of Alexander Dumas and Co.* Herein were set forth the whole secrets of that prison-house. How Macquet had furnished, as per order, plot, incident, every thing, to *Monte Christo* and *Reine Margot*, the *Trois Mousquetaires*, and their bulky sequels; to the *Chevaliers d'Harmenthal* and *Maison Rouge* both; to the *Dame de Montsoreau*; in short, to all the most striking and effective of the Dumas *répertoire*. How Paul Maurice supplied *Ascanio*, the *Deux Dames*, and *Amaury*, all complete, fitted with upholstery and decoration. How Fiorentino, the Italian, brought in the sparkling chronicles of Corricolo and Speronare. How the popular *Balsamo Memoirs* were openly filched from the *Revue Britannique*, and *Albine* from an old German romance. How Gérard de Nerval, Théophile Gautier, Emile Souvestre, with a host of others, have laboured for him at the innumerable dramas that bear his name. With these facts the curious have been for some time familiar. The world, too, has had its suspicions, and looks distrustfully on the great name as though associated with certain charlatan influences.

Such being the significance of *The Firm of Alexander Dumas and Co.*, it will not excite surprise that it was a little unacceptable to the great romance factor. It led to an interview between M. de Mirecourt and certain other parties, the history of which is unfolded very pleasantly in one of the little books. He is sitting one morning in his room, No. 15 Rue des Martyrs, when to him enter two fierce gentlemen bearded like pards.

"M. de Mirecourt?" they say interrogatively. "I am that person, gentlemen." "You are the author of certain articles in the *Silhouette*?" "I am." "This is a matter that admits of but one solution. We are come to ask satisfaction in M. Dumas' name." "With all my heart, gentlemen. My seconds will be with you at any hour you please to mention. Your principal, it seems, declines further appeal to the tribunals." "Excuse us," strike in the pards politely, "we do not come from M. Alexandre Dumas père, but Alexandre Dumas fils." "O, in that case I have a different answer." Here the bell is rung, and the *bonne* appears. "Bring down Master Edgard." Presently Master Edgard is brought in, a lad of some six or seven years old, the state of whose mouth and adjoining parts indicate that he has been indulging freely in jams. "Gentlemen," says M. de Mirecourt, putting forward the interesting youth, "let me make known to you my son, who will take up his father's quarrel with at least as much spirit as M. Dumas the younger will exhibit in his own. My son will be happy to meet your wishes in any way."

The pards are furious. "The joke is ill-timed," they roared together. "Excuse me; I have no other way of showing the absurdity of the situation. The author of *Henri III.* has a steady eye and steady foot. What hinders him fighting his own battles? Should I have the misfortune, I won't say to kill, but even to inflict a scratch upon his son, we all know what a tumult he would raise. He would have the whole public on his side. Just get me a letter from the great romance writer, authorising this duel, or better still, give my seconds your word of honour that you have his authority, and I agree. That is my ultimatum. Gentlemen, your most obedient." They departed without a word more, and never returned. From that day forth there was vendetta between the houses of Dumas and De Mirecourt. The latter goes out, hunting down his enemy pitilessly, thirsting, as it were, for his scalp, and

pursuing him with stray allusions through many of the yellow books.

The little embroglio with Madame Sand next deserves attention. It may be well conceived that the giving an impartial view of that lady's life and adventures would be a service of considerable delicacy, requiring nice tinting and shading off, which duty has M. de Mirecourt contrived to accomplish very satisfactorily. But madame is not content. She takes exception to M. de Mirecourt's portraiture, though, strange to say, she enters no protest against the awful effigy that hovers at the threshold of the book. In a letter to the *Presse*, she remonstrates with M. de Mirecourt in her own *spirituelle* fashion: *

"Sir," she begins, "with all thanks for the handsome terms in which you have spoken of me, allow me to correct sundry mistakes into which you have fallen. I know, as well as the rest of mankind, the exact measure of importance to be attached to these lives of men of the day, which are founded on pure conjecture, and on supposition more or less ingenious, more or less gratuitous. My own, above all others, has but small chance of being correct, considering that I have not the honour of being acquainted with the writer, and that he has not received either from me, or friends that *really* know me, any sort of assistance whatever. These lives may have a certain literary value as pieces of criticism; but taking them as historical documents, they might as well have never been written. I can easily prove this by going regularly through the one that treats of my own life. There is scarcely a single fact set down correctly, not even my name or age. I am not called Marie, neither was I born in 1806, but in 1804. My grandmother never lived at L'Abbaye-aux-Bois. My father was not a colonel. My grandmother esteemed the Scriptures considerably above Rousseau's *Contrat Social*. At fifteen, I did not practise shooting, nor did I ride, being at a convent all that time. My husband was neither old nor bald. He was just seven-and-twenty, and had plenty of hair. I have never inspired with attachment an humble merchant of Bourdeaux. The 'twentieth chapter of a romance' is nothing but a chapter of romance. . . . The trait you mention of M. Roret is extremely honourable to him, and I believe him quite capable of it; but he could not have presented me with one thousand francs on the success of *Indiana*, for the simple reason that I have never had the pleasure of engaging in any transaction with him whatsoever. Neither MM. Kératry nor Rabbe were ever invited by M. Latouche to pronounce upon *Indiana*. M. Latouche pronounced upon it himself; besides, he never had any kind of relations with M. Kératry. I never engaged a suite of apartments, or threw them open to my friends after the success of *Indiana*. For five or six years I always occupied the same little room, and received the same small circle.

I now come to the first of those facts which I am most anxious to disprove, making you heartily welcome to all the rest. Allow me to quote your own words, monsieur. 'In this intoxicating flood of success it was not generous of her to forget the faithful companion of her struggling years. Sandeau, wounded to the soul, set off alone for Italy on foot, and without a sou.'

1. M. Jules Sandeau never set off for Italy on foot, and without a sou. As you would insinuate that this was my fault, which supposes that he would accept of money from me after our disagreement, the last thing you would wish to convey, I do now assure you, as he will do also, if you require it, that he had plenty of means, supplied, too, from his own resources.

2. He did not set off wounded to the soul. I have letters of his, as creditable to him as to me, proving the direct contrary, —letters which I have no reasons for making public, knowing that he always speaks of me with the esteem and affection he owes me.

Allow me, also, to remind you that a certain lively anecdote, relating to one M. Kador—not known to me with that initial—is very pleasant, but utterly without foundation. Modesty, too, obliges me to inform you that I do not improvise quite so well as M. Listz, who is my friend, but not my master. He has never given me lessons, and I cannot improvise at all. The same feeling of modesty obliges me to tell you that we dine in very simple fashion at my table, and without all that elegance you so kindly give me credit for. As regards this, I am truly grieved to be obliged to contradict you; but I believe it will not do you very much harm, and that in choosing me for the heroine of your pretty little romance you had no other object than to display the skill and talents you really possess.

Receive, monsieur, &c. &c."

To her M. de Mirecourt ingeniously replies, eschewing with infinite wisdom the real matter of discussion. He was indeed no match for the clever lady.

Said M. de Mirecourt:

"Madame, you do me the honour of addressing me in the *Presse*, and you attack my humble little books with that omnipotent pen which has so stirred the reading world. . . . I am not altogether a child, madame; I am not even a young man, as you would seem to suppose. I have lived long, seen much, learned much. Before presenting my readers with this gallery of celebrated men, I was quite aware of what was in store for me. No man can lay his hand on living subjects without stirring the muscles and making the flesh quiver. No one can try and make his way into the secrets of a life without an attempt being made to put him away from the door.

Unhappily that cannot be done so easily. Celebrity is but a glass-house. We can look in at all hours, even though the doors are closed. You live in such a house, madame. I look in and see, and tell what I see. If you say that I have not seen properly, I can only repeat that my eyes are excellent. If you persist in maintaining that I am short-sighted, I can only bow without a word more," &c.

Next comes the most surprising incident of this curious passage of literary history. As was hinted at the commencement, the even tenor of his life has been much disturbed latterly. The unhappy chronicler has been leading a sort of Cain-like existence, every man's hand being lifted against him, and furnished with a stone against occasion serve. He is waging desperately a kind of guerilla warfare, as it were, from behind rocks and trees. Pierce diatribes, fines, decrees, have been showered plentifully upon him, so that he may be said to lead the life of a dog, or some wretched hunted hound. But the most cruel blow was to come from within,—from a traitor and deserter. Some two months since a little blue pamphlet stole into the world, born of one Peter Mazercollie, bearing title *The Firm of De Mirecourt and Co.* Here is ample and unreserved confession, every thing told with delightful candour, by one who lived beneath M. de Mirecourt's roof and eat of his salt. From him it is to be gathered that there is no such party as De Mirecourt, but there is Jacquot—plain Jacquot of that ilk; which offers to reviled Janin most sweet revenge and crushing retort for those sobriquets of parrot and macaw, showered on him so plentifully. It is also here unfolded how the said Jacquot, when slaying the *Sieur Dumas* so pitilessly for sending forth books not his own under his proper style and titles, had all the while been pursuing the selfsame course, having collaborators, aides-de-camp, and other assistants of his own, to do the work. It is here revealed that of these hundred and thirty biographies, scarcely forty have been written by delusive Jacquot himself; that of these forty, Heaven only knows how few have not been stolen wholesale from old journals and forgotten books. That the collaboration was conducted much after this fashion: the informer going about questing, as it were, lying in wait for critics and literary people, decoying them into corners, and entrapping them into short histories concerning the subject then being written up. Or Jacquot would invite likely people to certain little dinners, or *petits soupers*, pumping them adroitly, while the collaborator took notes diligently under his napkin, these little piquant anecdotes going in for seasoning to the biography. Sometimes there came a dearth of anecdotes, and the biography languished hopelessly, this, too, after all the usual recognised sources had been tried. There was then nothing for it but to fall back upon such humble inventive talents as the writers might happen to possess. This our king's evidence confesses to with admirable *naïveté*; and to his happy fertility are owing some of the livelier anecdotes relating to the older Dumas and his brethren.

After this, what is there left for unhappy De Mirecourt, or rather Jacquot? Clearly nothing, save to close his workshop, and expatriate himself with all speed; or else realise literally that picture of Janin's, wherein he is prefigured as purloining the cord wherewith he shall after hang himself until he drop.

The last thing in the world he is dreaming of. Never was the maison Jacquot et Cie. so full of faith and indomitable ardour. The journal before spoken of has been set up,

and comes forth once a-week, filled with those more awakening anecdotes hitherto kept back. Hearken yet again, and for the last time, to M. Jacquot: "The gross treatment of the newspaper-writers has decided us on issuing a sheet that will protect our honour. There we shall have the right of replying to our enemies every eight days regularly. . . . So God protect us, and give us heart and courage!" Amen, M. Jacquot!

NICK.

A CHILD'S STORY.

THERE dwelt in a small village not a thousand miles from fairy-land a poor man, who had no family to labour for, or friend to assist. When I call him poor, you must not suppose he was a homeless wanderer, trusting to charity for a night's lodging; on the contrary, his stone house, with its green veranda and flower-garden, was the prettiest and snug-gest in all the place, the doctor's only excepted. Neither was his store of provisions running low: his farm supplied him with milk, eggs, mutton, butter, poultry, and cheese in abundance; his fields with hops and barley for beer, and wheat for bread; his orchard with fruit and cider, and his kitchen-garden with vegetables and wholesome herbs. He had, moreover, health, an appetite to enjoy all these good things, and strength to walk about his possessions. No, I call him poor because, with all these, he was discontented and envious. It was in vain that his apples were the largest for miles around, if his neighbour's vines were the most productive by a single bunch; it was in vain that his lambs were fat and thriving, if some one else's sheep bore twins: so, instead of enjoying his own prosperity, and being glad when his neighbours prospered too, he would sit grumbling and bemoaning himself as if every other man's riches were his poverty. And thus it was that one day our friend Nick leaned over Giles Hodge's gate, counting his cherries.

"Yes," he muttered, "I wish I were sparrows to eat them up, or a blight to kill your fine trees altogether."

The words were scarcely uttered when he felt a tap on his shoulder, and looking round, perceived a little rosy woman no bigger than a butterfly, who held her tiny fist clenched in a menacing attitude. She looked scornfully at him, and said: "Now listen, you churl, you; henceforward you shall straightway become every thing you wish; only, mind you must remain under one form for at least an hour." Then she gave him a slap in the face which made his cheek tingle as if a bee had stung him, and disappeared with just so much sound as a dewdrop makes in falling.

Nick rubbed his cheek in a pot, pulling wry faces and showing his teeth. He was boiling over with vexation, but dared not vent it in words lest some unlucky wish should escape him. Just then the sun seemed to shine brighter than ever, the wind blew spicy from the south; all Giles's roses looked redder and larger than before, while his cherries seemed to multiply, swell, ripen. He could refrain no longer, but, heedless of the fairy-gift he had just received, exclaimed, "I wish I were sparrows, eating—" No sooner said than done; in a moment he found himself a whole flight of hungry birds, pecking, devouring, and bidding fair to devastate the envied cherry-trees. But honest Giles was on the watch hard by; for that very morning it had struck him he must make nets for the protection of his fine fruit. Forthwith he ran home, and speedily returned with a revolver furnished with quite a marvellous array of barrels. Pop, bang—pop, bang! he made short work of the sparrows, and soon reduced the enemy to one crestfallen biped with broken leg and wing, who limped to hide himself under a holly-bush. But though the fun was over, the hour was not; so Nick must needs sit out his allotted time. Next a pelting shower came down, which soaked him through his torn ruffled feathers; and then, exactly as the last drops fell and the sun came out with a beautiful rainbow, a tabby cat pounced upon him. Giving himself up for lost, he chirped in desperation, "O, I

wish I were a dog to worry you!" Instantly—for the hour was just passed—in the grip of his horrified adversary, he shook himself, a savage bull-dog. A shake, a deep bite, and poor puss was out of her pain. Nick, with immense satisfaction, tore her fur to bits, wishing he could in like manner exterminate all her progeny. At last, glutted with vengeance, he lay down beside his victim, curled his tail about his legs, and fell asleep.

Now that tabby-cat was the property and special pet of no less a personage than the doctor's lady; so when dinner-time came, and not the cat, a general consternation pervaded the household. The kitchens were searched, the cellars, the attics; every apartment was ransacked; even the watch-dog's kennel was visited. Next the stable was rummaged, then the hay-loft; lastly, the bereaved lady wandered disconsolately through her own private garden into the shrubbery, calling "Puss, puss," and looking so intently up the trees as not to perceive what lay close before her feet. Thus it was that unawares she stumbled over Nick, and trod upon his tail.

Up jumped our hero, snarling, biting, and rushing at her with such blind fury as to miss his aim. She ran, he ran. Gathering up his strength, he took a flying-leap after his victim; her foot caught in the spreading root of an oak-tree, she fell, and he went over her head, clear over, into a bed of stinging-nettles. Then she found breath to raise that fatal cry, "Mad dog!" Nick's blood curdled in his veins; he would have slunk away if he could; but already a stout labouring-man, to whom he had done many an ill turn in the time of his humanity, had spied him, and, bludgeon in hand, was preparing to give chase. However, Nick had the start of him, and used it too; while the lady, far behind, went on vociferating, "Mad dog, mad dog!" inciting doctor, servants, and vagabonds to the pursuit. Finally, the whole village came pouring out to swell the hue and cry.

The dog kept ahead gallantly, distancing more and more the asthmatic doctor, fat Giles, and, in fact, all his pursuers except the bludgeon-bearing labourer, who was just near enough to persecute his tail. Nick knew the magic hour must be almost over, and so kept forming wish after wish as he ran,—that he were a viper only to get trodden on, a thorn to run into some one's foot, a man-trap in the path, even the detested bludgeon to miss its aim and break. This wish crossed his mind at the propitious moment; the bull-dog vanished, and the labourer overreaching himself fell flat on his face, while his weapon struck deep into the earth, and snapped.

A strict search was instituted after the missing dog, but without success. During two whole days the village children were exhorted to keep indoors and beware of dogs; on the third an inoffensive cur was hanged, and the panic subsided.

Meanwhile, the labourer, with his shattered stick, walked home in silent wonder, pondering on the mysterious disappearance. But the puzzle was beyond his solution; so he only made up his mind not to tell his wife the whole story till after tea. He found her preparing for that meal, the bread and cheese set out, and the kettle singing softly on the fire. "Here's something to make the kettle boil, mother," said he, thrusting our hero between the bars and seating himself; "for I'm mortal tired and thirsty."

Nick crackled and blazed away cheerfully, throwing out bright sparks and lighting up every corner of the little room. He toasted the cheese to a nicety, made the kettle boil without spilling a drop, set the cat purring with comfort, and illuminated the pots and pans into splendour. It was provocation enough to be burned; but to contribute by his misfortune to the well-being of his tormentors was still more aggravating. He heard, too, all their remarks and wonder about the supposed mad-dog, and saw the doctor's lady's own maid bring the labourer five shillings as a reward for his exertions. Then followed a discussion as to what should be purchased with the gift, till at last it was resolved to have their best window glazed with real glass.

The prospect of their grandeur put the finishing-stroke to Nick's indignation. Sending up a sudden flare, he wished with all his might that he were fire to burn the cottage.

Forthwith the flame leaped higher than ever flame leaped before. It played for a moment about a ham, and smoked it thoroughly; then, fastening on the woodwork above the chimney-corner, flashed full into a blaze. The labourer ran for help, while his wife, a timid woman with three small children, overturned two pails of water on the floor and set the beer-tap running. This done, she hurried, wringing her hands, to the door, and threw it wide open. The sudden draught of air did more mischief than all Nick's malice, and fanned him into quite a conflagration. He danced upon the rafters, melted a pewter-pot and a pat of butter, licked up the beer, and was just making his way towards the bedroom, when through the thatch and down the chimney came a rush of water. This arrested his progress for the moment; and before he could recover himself, a second and a third discharge from the enemy completed his discomfiture. Reduced ere long to one blue flame, and entirely surrounded by a wall of wet ashes, Nick sat and smouldered; while the good-natured neighbours did their best to remedy the mishap,—saved a small remnant of beer, assured the labourer that his landlord was certain to do the repairs, and observed that the ham would "eat beautiful."

Our hero now had leisure for reflection. His situation precluded all hope of doing farther mischief; and the disagreeable conviction kept forcing itself upon his mind that, after all, he had caused more injury to himself than to any of his neighbours. He remembered, too, how contemptuously the fairy woman had looked and spoken, and wondered how he could ever have expected to enjoy her gift. Then it occurred to him that if he merely studied his own advantage without trying to annoy other people, perhaps his persecutor might be propitiated; so he began thinking over all his acquaintances, their fortunes and misfortunes, and having weighed well their several claims on his preference, ended by wishing himself the rich old man who lived in a handsome house just beyond the turnpike. In this wish he burned out.

The last glimmer had scarcely died away, when Nick found himself in a bed hung round with faded curtains, and occupying the centre of a large room. A night-lamp burning on the chimney-piece just enabled him to discern a few shabby old articles of furniture, a scanty carpet, and some writing materials on a table. These looked somewhat dreary; but for his comfort he felt an inward consciousness of a goodly money-chest stowed away under his bed, and of sundry precious documents hidden in a secret cupboard in the wall.

So he lay very cosily, and listened to the clock ticking, the mice squeaking, and the house-dog barking down below. This was, however, but a drowsy occupation; and he soon bore witness to its somniferous influence by sinking into a fantastic dream about his money-chest. First it was broken open, then shipwrecked, then burned; lastly, some men in masks, whom he knew instinctively to be his own servants, began dragging it away. Nick started up, clutched hold of something in the dark, found his dream true, and the next moment was stretched on the floor—lifeless, yet not insensible—by a heavy blow from a crowbar.

The men now proceeded to secure their booty, leaving our hero where he fell. They carried off the chest, broke open and ransacked the secret closet, overturned the furniture to make sure that no hiding-place of treasure escaped them, and at length, whispering together, left the room. Nick felt quite discouraged by his ill success, and now entertained only one wish—that he were himself again. Yet even this wish gave him some anxiety; for he feared that if the servants returned and found him in his original shape they might take him for a spy, and murder him in downright earnest. While he lay thus cogitating, two of the men reappeared bearing a shutter and some tools. They

lifted him up, laid him on the shutter, and carried him out of the room, down the backstairs, through a long vaulted passage, into the open air. No word was spoken; but Nick knew they were going to bury him.

An utter horror seized him, while at the same time he felt a strange consciousness that his hair would not stand on end because he was dead. The men set him down, and began in silence to dig his grave. It was soon ready to receive him; they threw the body roughly in, and cast upon it the first shovelful of earth.

But the moment of deliverance had arrived. His wish suddenly found vent in a prolonged unearthly yell. Damp with evening dew, pale as death, and shivering from head to foot, he sat bolt upright, with large staring eyes and chattering teeth. The murderers, in mortal fear, cast down their tools, plunged deep into a wood hard by, and were never heard of more.

Under cover of night Nick made the best of his way home, silent and pondering. Next morning he gave Giles Hodge a rare tulip-root, with full directions for rearing it; he sent the doctor's wife a Persian cat twice the size of her lost pet; the labourer's cottage was repaired, his window glazed, and his beer-barrel replaced by unknown agency: and when a vague rumour reached the village that the miser was dead, that his ghost had been heard bemoaning itself, and that all his treasures had been carried off, our hero was one of the few persons who did not say, "And served him right, too."

Finally, Nick was never again heard to utter a wish.

POLYGLOT READINGS IN PROVERBS.

THERE WAS NE'ER ENOUGH WHAR NAETHING WAS LEFT (Scotch).—When all is eaten up, it is a token that the commons were but short. "There is not enough, if there's not too much" (French).—*Assez n'y a, si trop n'y a.* Beaumarchais makes Figaro utter this pretty hyperbole about love, which has also become a proverb, "Too much is not enough,"—*Trop n'est pas assez.* W. K. KELLY.

ITALIAN GIRL KNITTING.

By MAGNI OF MILAN.

It is very much the custom in Italy, as in all countries where the people depend mainly upon agriculture for a subsistence, that the females of a household should employ themselves in knitting for the benefit of their more active relatives, whose avocations call them out of doors—in field, farm, or vineyard work. While a girl is yet too young to go abroad with her father or brethren, as we lately saw in Mr. Eagles's "Il Ritorno della Contadina," she sits at the cottage-door or in the chimney-corner knitting assiduously, listens to the querulousness of the infirm and aged grandparents; overlooks the boisterous romping of the juniors, keeping them out of mischief; or, if in a lone house, prepares the labourer's meal, and afterwards takes it a-field at noon.

If she dwells in a mountain cottage, built of stone and mossed over, held by the family from immemorial time (that is, immemorial to them), she may sit on a rock before the door under the vine-arbour, and see far below the droves of black and long-horned cattle tumultuously rush along the distant roads on the Campagna, above which hangs a purple haze from dawn till night; or behold the solitary traveller far off creep along mile after mile over the seemingly endless, dusky, and sullen plain that has presented to him day by day the same flat unchanging horizon, till at last he hails delightedly the mountain land upon whose very front, perhaps, may be discovered, while yet a thousand feet below, the glittering white walls of the cottage, brilliant against a belt of sombre pines upon the hill above.

THE LITTLE BLACK BOX.

A STORY OF THE SHAFTESBURY PLOT.

By G. W. THORNBURY, AUTHOR OF "ART AND NATURE."

CHAPTER II.

* THE STAG AT BAY.

It was scarcely more than eight o'clock; the dew still lay gray upon the grass, over which they cantered, laughing and singing, beneath the tall trees, some of which were already destined for the axe. The wind had arisen, and seemed chasing the shadows before them, as the quick slant sunbeams coursed over their path, swift and silent as if scared by the sound of the horses' hoofs. The birds hushed their song too as they approached, or flew with startled notes down the hedges. The rabbits leaped away amid the furze; and the hare limped off over the long bare fallow.

After a time, turning to the right from the avenue, they entered a long sandy lane, shut in with hedges; and from thence, over a high upland of downs, on to the edge of the covert, which was their destination. Before them lay a broad country, of dark plough-land, green meadows, and wheat stubble. The horizon stretched far away, like a broad purple sea, amid which the white farms lay like white-sailed

barks, the spires cutting the sky-line like the tapering mast of some huge craft the hull of which escaped the eye.

The morning was fresh and bright, and the wind piped merrily amid the tangled rigging of the dwarf oaks that edged the covert within which lay the wild stag, whose doom was already decided. Overhead the white piles of clouds floated like ships under a press of sail through a glassy sea of blue, which turned here and there to amber, as if washing the roots of some golden island as yet out of sight.

Many were the greetings that met the ears of the party. "Good morning, Sir Robert; and how's the rheumatism?" "Pretty Mistress Mabel, all the pleasures of summer attend you." Or it was, "Sir Robert Darcy, I greet you well; and, Miss Mabel, the summer's sun smile on you." Or, "Brave Sir Robert, well met on this glorious anniversary." And Sir Robert flung out his hands to them all, and sang, and shouted, and quoted proverbs, and talked of Edgehill; while Mabel looked at her glove-buttons, and played with her whip, and smiled, and darted arch looks, and won half a dozen hearts, and sent home old gouty justices—those at least who were bachelors—to drink her health, after the third bottle, from a jack-boot, and with other fantastic feats of gallantry now very justly passed into oblivion. And as the party, every moment gathering in number, the riders not merely in scarlet,—for they were chiefly old officers,—but in all de-

scriptions of gay colours, cantered up, rode along lanes and past farms, slowly following the huntsman as he moved forwards to the second cover, it was an exhilarating sight to see the children run out, and comely maidens in straw-hats, throwing flickering latticed shadows over their pretty sun-burnt faces, hurry to open the gate, with a "God save ye, gentlemen, and send you good sport!" and none without a special greeting for Mabel, who would stop behind for a moment with all sorts of kind inquiries after bedridden grandmothers and crippled fathers, and then gallop off to join her impatient father, or some old Cavalier-gallant with a long black patch saddling his nose, from whose long-winded compliments she had broken, perhaps, somewhat abruptly. But though none felt more keenly than Mabel the charm of the sportsman's expectation, she had been dowered with a sense of many pleasures more subtle though less palpable.

That summer-morning her imagination, though she never wrote a verse in her life, and certainly had as yet not read many (for such beings as poets had no part to play in Mr. Wilson's gloomy cosmogony), was filled with sounds and senses that hurried in mingled sweetness through her mind, leaving no image, but merely a vibration of music but just suspended, or that perfume of Paradise that surrounds us when we wake slowly from a dream of unattainable happiness.

She heard the larks singing in clusters as they stormed heaven's gate, or tried to outrun the returning sunbeam, or to nestle in that low white cloud that, all brightness itself, overshadowed their nests, and then, drunk with the madness of song, fell back from the sun they could not reach with all their ceaseless strivings. She marked with no straining effort,—for her love of nature was a beautiful uneducated instinct,—the vast striding shadows passing over the young wheat as if they were wandering round the world; every sound of the wind was full to her of unformed words, and music hinted at sweeter than was ever heard on earth; and she laughed as the butterfly hovered round her cheek as if he took it for some rare flower. Then with a pretty pettishness she would beat her glove with her whip, and say: "Forsooth, this stag is very slow in rousing;" and the next minute, remembering a scrap of the Horace-lesson of the morning, would hum it to the old French air of "La Vendange."

"I don't like your cursed French words," said a horse-dealer, who was heaping a lover's praises on a certain 'bit of a mare,' and almost persuading Sir Robert into a purchase; "and I don't like the people, or none of their lingo."

"Give us 'My father was born before me;' that's the tune, Mabel," said Sir Robert; "and don't buzz in that way, like a bee in a bottle, but out with it; for zounds, there's no one here with so pretty a pipe."

"Fie, father! what, before all the field? And besides, 'My father was born before me' is a jig; and I only know minuet tunes."

"I think, by the plenitude of this solar light," said an old brother-soldier riding up at this moment, and shaking Sir Robert ferociously by the hand, "as we used to say at court, I never saw this little lady of thine look so charming."

Mabel, who had, of course unconsciously, just turned her head to watch a lark rising, now suddenly flitted round, and greeted the old friend with girlish warmth; for in those days cold prudery was not thought a necessary voucher for maidenly purity.

"Ah, ah! Tom, none of thy old court compliment, or you'll turn her giddy head. 'Tis a pretty thing enough," he said, fondly chucking his daughter under the chin, just as if she was a foal he was buying; "and these roses don't lose their colour in a shower like a court-madam's."

"Stars and planets!" whispered a young bystander to the horse-dealer; "but the Whigs of Oxfordshire can show nothing like that."

"Kick me," said the horse-dealer, rather disgusted with Sir Robert, who had broken off on hearing the silly was by the Troutbeck runner out of Rapid Jack; "you should see

Miss Lucy Bellsizes! why, she'll drive her father's coach-and-six full gallop round Compton Park."

"Well, but I thought—"

"Well, there was something unpleasant about young Churchill."

But we leave their conversation to return to stout Sir Robert, who, affable, a good boon companion, a brave old soldier, a sound Tory, and above all, what was of more consequence in such a company, a superb rider, whom no fatigue—even now in his sixtieth year—could weary, and no fence daunt, was already surrounded by a dozen friends. Never before was seen such pulling at gloves, and shaking of hands, and touching of whips, mingled with such curses at straggling dogs and jibbing horses.

"Quite a stranger, Sir Robert; and your fair daughter here, I vow, a complete vestal. Is Crow's Nest turned into a nunnery?" said a stiff-throated gentleman in spectacles, rather leaning to the Whig persuasion, and no very cordial friend in consequence of Sir Robert, whom, however, he respected as of gentle blood and an old stock,—almost as old as his own,—for proud men do not like a prouder race. "We saw nothing of you at the race-ball; and there was Lady Wildfire running every where to find this charming young lady here. Are you growing precise, eh, Sir Robert, eh?"

"Reasons, Mr. Wildfire, reasons. Mabel was not unwilling," he chuckled, "to go, you may bet a jacobus. Egad, when you find a Darcy quarrel with mince-pies and plum-porridge, and rail at a cistard, hang him for a d—d Trimmer; he's none of those fellows who won't sit down to eat a stolen goose, but nevertheless trot off snuffling a psalm on a stolen mare, as Tribulation Barebottle does in the play. Do you remember what Rabelais says?"

"Now don't quote that naughty book, there's a good papa," said Mabel, laying her hand gently on his.

"That's where it is; this daughter of mine won't let me have my own way; she rules me like the Associations did the seven counties. Is that old knave Troutbeck here to-day?" he said, abruptly turning with a frown upon his honest face to the stiff-necked friend, who had dismounted to tighten his saddle. "What? I can't hear what you say with your head under that flap."

"Mr. Troutbeck, I hear, has gone with sixty of his tenantry, armed back and breast, to meet the Earl of Shaftesbury, who is coming at the head of four thousand men of the London Protestant club to attend Charles Stuart at the Oxford parliament, that opens to-morrow; and pray God we be preserved from Popery and bloodshed."

"And a pretty way to prevent it, to let old Tony bring down his clubmen, with their cursed blue ribbons and leather lungs, to shout down all good men who love God and the Church of England. And harkee here, Mr. Wildfire; you're of a good old family, and have suffered as I have for the right, but to prevent quarrelling, pray call the king the king, and not Charles Stuart."

"And may I also beg of you, Sir Robert Darcy," said the Trimmer, with a starched smile, "to denominate that true Protestant the Earl of Shaftesbury by his full cognomen of Anthony Ashley Cooper, Earl of Shaftesbury?"

"What!" said Sir Robert Darcy, digging his spurs in his horse, and pulling him almost on his haunches, just to give vent to his indignation. "What! Anthony Ashley Cooper Earl of Shaftesbury and his gracious Majesty in one breath! Out upon it, if I wouldn't lay him by the heels, and Oates too, and the whole of the crew! There, there, Mabel, never mind me. Egad, it sends the blood to my head, and fills me full of those old songs; for what does the old proverb say? 'He is a fool who cannot be angry.'" And he broke out, much to Mr. Wildfire's indignation, with

"Farewell, Say and Seale, and hey,
Farewell, Say and Seale, and ho,
And those sons of Ayman

Shall hang as high as Haman,
With the old Anabaptists they came on,
With a hey trolly lolly ho."

"He's a fool who cannot be angry," he growled again.

"But he's a wise man who will not," said a merry voice, as a horseman rode up and took Sir Robert's hand; "and there's a proverb clonched. In these times," he said, whispering in his friend's ear, "we want plaisters and not blisters; even a brave man should not wilfully offend his enemies. Here's a mutual friend here you little expect; let me introduce you."

But before Sir Robert could clap his merry-eyed but prudential friend upon the back, a clump of horsemen, rather more soberly dressed than the other gallants of the field, and some of whom had had their backs turned to Sir Robert, broke up as he approached, and, to the utter astonishment of all, Mr. Troutbeck and his son were the leaders of the troop.

But as these two nonconformist gentlemen are likely to play a somewhat important part in our story, we will interrupt the scene for a moment, even at this critical period, to describe the new actors who have just entered abruptly on the stage.

The elder of the two, who was clad in a sombre coat, unadorned by lace, except on the cuffs, was a morose-looking sallow man of about fifty, who, disliked by the world, had consoled his pride by turning round and hating mankind upon strict Calvinistic principles. His eyes were hard and cold, his features had no life or pliability, and his mouth was drawn down by habitual melancholy. In stature he was tall and thin, and stooped slightly, as if from long sedentary habits. If report was true, Mr. Troutbeck was a dangerous man, an enemy of the Government, a member of many secret societies; and his enemies said, even of the notorious "Calves' Head Club,"—a club that, among Tories of this age, had acquired as disgraceful a notoriety as the noted Hell-Fire Club did among quiet people of a century later. He was said to be a correspondent of Shaftesbury, a leader of the disaffected of the county, an attendant at secret conventicles, and an applauder even of the bloody tenets of the Fifth-Monarchy men. To add to the incongruities of his character, although in his own county cold, reserved, and difficult of access, he was said to be a sociable visitor of the London coffee-houses, an occasional attendant at court, one who knew Algernon Sidney, and attended the meetings of the Royal Society. Sir Robert he looked upon as a decaying gentleman, hardly worth regard, but for the oldness of his family,—a claim which his pride acknowledged, although with some reluctance.

But gray November and golden June are not more dissimilar than this unloving plotting sire and his son, who rode beside him, not on that pale horse that made the peasantry call his sire Father Death, but on a chestnut stallion, full of fire, and curveting in all the measured antics of the *manège*. He was a frank-looking open-browed young man, of some five and twenty; clear-eyed, and with a slightly sarcastic smile always playing round his mouth, which was yet firm and clamped at the corners, matching a full and prominent chin. He was rather pale, and the red had retreated a little to the centre of his cheek; his crisp brown moustaches were twisted up from the lip. He wore no wig; but his thick clustering hair fell in dark masses on to his shoulders, almost hiding the plain broad lace-folds of the snowy Steenkirk, that contrasted with the deep green of his velvet hunting-coat. His broad-brimmed hat was ribboned with green; his high boots, and heavy hunting-sword, with its silver hilt hanging from a purple fringed sword-belt, gave him more the character of a Cavalier than a young Whig huntsman.

As the gentlemen raised their hats, with a few short cold greetings and stiff salutes, a keen observer might have observed that Mabel slightly coloured, and grew suddenly anxious to disentangle a knot in Black Jack's mane; while the young man's eyes turned towards her, and rested there, as if rather by instinct than will.

"I had heard you were gone to attend this meeting at Oxford," said Mr. Troutbeck to Sir Robert; "for we coted by the way two gentlemen from the court, who asked us the

nearest way to Crow's Nest; but I heard them say, as they rode off, there was not much chance of your not being a Trimmer, for they heard that you kept a nonconformist chaplain, and had ceased going to the race-balls."

"And I heard," said Sir Robert, much elated by the news, and cutting the air with his whip, at the bare thought of turning Trimmer, "that you had ridden to join Tony and his 'prentices, to go and shout 'No Popery' with our good king's bastard."

"We ride a troop of sixty," said Troutbeck, drawing himself up to his full length; "and join the earl at the cross-road by Williton; boot and saddle after dinner, and a few Protestant toasts."

"One fool makes many," that's all I say," said Sir Robert; "and you may take it to snuff if you like,—you, or any man. If the old days of buff and Cavalier come again, if I won't melt down every spoon, ay, and my lady's silver fan here present; egad, and pawn my last acre, and cut down my last oak too, for the good old cause. And though I haven't three hundred men at my back, as I once had, before Whiggery ate into my land, I can still mount half a dozen; and half a dozen true men can make twenty Round-heads,—don't take offence,—turn tail; for blood and heart is not lost with fields and farms, no, nor bought with them; and your paltry Grecian pillars, what are they to an old avenue that no man can buy?"

"I don't come here to quarrel," said Mr. Troutbeck, his lips whitening with rage; for a dozen Tory gentlemen were laughing round him, to hear what they called 'Sir Robert's ballragging the old mummy of a Whig;' "but my door can be found at any time by any friend of yours."

"A challenge, a challenge!" roared a dozen squires' voices. There was no knowing what might have happened, for the two parties were beginning to knot and pair, when a loud blast of a horn was heard; and the next moment, half a mile distant, a stag of ten was seen for a moment crashing through a low bushy copse, and the next breaking out across the champaign country beyond, with a few of the foremost hounds hard at his heels. In an instant the disputants forgot their feud,—forgot king, crown, covenant, and Whiggery,—and galloped off like mounted demons in the direction of the yelp, that came by starts upon the wind. Not the last among them was Sir Robert, restored in a moment to perfect serenity and happiness, leaving Mabel, if she could not reach his side,—which she generally did,—to follow, guarded by Roger, whose watchful eye never lost sight of her for a moment; although, when he heard Sir Robert at words with the "old Whig," he had, it must be confessed, pushed into the ring, to strike a blow again beside his old master if the need came.

Conspicuous in the flight was the horse-dealer, driving his steed at extravagant leaps in order to show its mettle and enhance its price, although with great probability of breaking its neck before he achieved a sale. "The paco is too fast for music," old Roger said, when he saw Mabel's cheek glow with excitement as she cleared a hedge like a swallow, and joined him in the charge. Behind them old Troutbeck and a few of the staid men could be seen following at a leisurely pace, rather like spectators than abettors of the sport. Above all sounded Sir Robert's horn, cheering on the dogs, and urging them to the attack with all the energy of the old soldier.

Young Troutbeck rode moodily beside his father, his laced cocked-hat drawn over his eyes, appearing, from frequent whispers, to be restrained from joining in the chase; but fate destined him, however unexpectedly, an important share in this day's achievement. The stag, cut off from escape in the direction of the Troutbeck woods, "took to soil," as hunters call it, in a small stream which wound amid the sloping meadows some six miles distant. The Troutbeck party, striking across the country, to be in, if possible, at the death without fatiguing their horses by the chase,—for they had other work on hand,—were among the first who arrived at the water, where the stag of force, with

sweeping antlers, of ten times at least, was standing at bay, eyeing the furious and baffled dogs that lined the river-bank.

In an instant the Troutbecks, and a few stragglers who had now joined them, leapt from their horses, many of them, especially one fat justice, at the great risk of never mounting again; for getting off a horse, if you are at all of the Falstaff build, is something like abdication, a difficult thing to retract.

"Make in at him," cried half a dozen voices; but no one seemed inclined to be either drowned or gored.

"I care not a straw for a stag on dry land," said the horse-dealer, who had come to display his horse, not his courage; "but I can't abide them cattle on that *terra infermer*."

"What's this, what's this,—a camp-meeting?" said Sir Robert with a sneer, as he burst into the ring, having been delayed by a stirrup-leather breaking, and saw their checkmated position. "Swim in, and prick him out with your sword, and never mind the old woman's saying,

'If thou be hurt with horn of hart, it brings thee to thy bier;
But barber's hand will boar's hurt heal, therefore thou needst not fear.'

A man who has got four inches of fat on his brisket can't be hurt very much by a prog with a buck's horn. Here goes, man!" and Sir Robert was actually tugging at his immense jack-boots in order to wade into the stream with less impediment to free action, when the deer, with a furious splash, scramble, and bound, leapt upon the bank, escaped a dozen blows of hunting-swords made at it, gored one dog, trampled another, and galloped off not a hair the worse, dripping as it went, and tossing its broad antlers as if in scornful delight at its triumph.

This time young Troutbeck was something more than a spectator. Stung by Sir Robert's taunts, which Mabel had heard,—for she had by this time joined the baffled party,—and vexed by a fall which he received from his foot slipping on the moist clay of the bank just as he cut at the fierce and dangerous prey, he had even been foolish enough to be offended at the horse-dealer, who had laughed and whispered to a friend, as if implying that the fall was well-timed. But the horse-dealer, being of a cold temper and essentially prudent, stammered out a hasty apology, and slunk off for fear of any further quarrel. In a moment the young horseman's brain was fired with the thought of a disgrace with which he now imagined himself, in the fumes of his pride, to be forever tainted. In a moment, with his untired horse, he had distanced Sir Robert, and was close upon the heels of the stag, and some distance before the huntsman. Three dogs, staunch and swift, had already "set him up" at the foot of a withered fir that, barked and bleached, stood like a skeleton at the entrance of a grassy glade. Troutbeck tried at first to gallop in roundly, but was afraid of hurting the hounds that were trying to get at his throat. A noble spectacle of courage under adversity was that royal stag, his dark dun hair steaming, his eye glaring, his foot spurning the turf, as he stood beneath that withered tree, with his face firm set against a world of foes, hope cut off, yet still heart-whole and undaunted; round him, like so many creditors round a debtor in sanctuary, barked the hounds. One tawny-muzzled dog of more than usual courage lay with its nose between its paws waiting for an opportunity; the rest yelped, howled, and raved, while keeping at a prudent distance from the sweep of those terrible antlers, already tipped here and there with crimson.

In a moment the deer broke through the dogs, and making at Troutbeck, tore his horse's side close to his thigh. This escape made him more wary, desperate as he was; for he heard the hunt rapidly approaching, with Sir Robert at their head, fretting at being outridden by a "whining young Whig." Firm, and of ready apprehension, the young huntsman leapt from his wounded horse, tied him by the bridle to a neighbouring tree; then cheering the dogs to a rush, so as for a moment to draw the deer from the pine-trunk that protected him, he leapt in and ham-

strung him with a single sweep of his heavy hunting-sword, then leaping on his back, cut his throat with a second blow from a hand as sure as it was quick.

When the first rider came up, and Sir Robert had sounded the mort, or death-signal, they found Troutbeck bestriding the fallen deer that still quivered with life. His hat had fallen off, and his hair blew over his eyes. One hand held the red hunting-knife, and the other, dripping with blood, held the antlers in its firm grasp. The Whig party were loud in exultation at the bravery of their young hero; the Tories loud in depreciation of his rashness at the hazard. Some shouted applause and waved their hats; others whipped off the hounds and shrugged their shoulders. Sir Robert wound his horn to summon stragglers, and said nothing.

"Wasn't it bravely done?" said Mabel, putting her hand on his shoulder, as her father drew somewhat back from the exulting crowd, that pressed to shake hands and congratulate the young huntsman, who was examining his horse's side with great anxiety.

"Pretty well for a Whig," said Sir Robert testily, turning away his head; "but, 'zooks, the thing's done every day.

'We're not the only person durst
Attempt this province, or the first.'

Don't go shouting in that way, Roger, as if you'd the falling-sickness. Haven't you seen me do this very thing a score of times; besides, didn't Swapem tell us the young psalm-singer slipped down at the brook to escape going. 'All's well that ends well,' is true enough; but 'Well begun, is half done,' is truer still. I say the lad's no mettle, and hasn't ridden to-day as a gentleman should; slinking about like a schoolboy at his old father's back, who's as black-hearted an old Puritan as ever sat on the bench."

"You lie," said a low stern voice behind them. It was Troutbeck himself. "It is not for this slander alone that I demand satisfaction," said Mr. Troutbeck, leaping from his horse, and calmly drawing his sword, "but for a growing insolence, that I see nothing but blood-letting can cure."

"It shall never be said that a Darcy was slow at that game," said Sir Robert, giving his horse to Roger, and bidding him ride home with Mabel, who neither screamed nor swooned, but clung to her father's arm, and in a low voice poured passionate entreaties into his ears.

"There, there, girl! Now, for God's sake, don't disgrace me. I know you would be an orphan; but still I cannot let my name be stained for twenty times worse than that; and there's your uncle at Paris, and he's an old man. Mr. Troutbeck, I'm at your disposal. We need scarcely measure swords; we're too old for such fencing-school tricks. The sun is in neither's favour, and we're both in boots—a plague on 'em. Room, gentlemen, room!"

By this time the whole hunt were around them, wrangling, encouraging. "There's always been bad blood between them, and there was with their fathers before them," said one. "A cold-blooded upstart," said the Tories; "a proud old ribald," said the Whigs.

"I claim the privilege of meeting Sir Robert Darcy," said young Troutbeck, putting his hand on the shining blade of his father's sword; "the insult was to me."

"I have already told Sir Robert," said his father sternly, "that I draw my sword to avenge twenty years of foul-mouthed insolence, and not the mere petulance of a baffled huntsman."

"D'ye hear that," said Sir Robert, beating the ground with his foot. "Adzooks, and haven't I been outwitted of my land, gentlemen, acre after acre, by this old plotting fox—my patrimony torn from me by crafty deeds."

"Lead the lady away, my son," said Mr. Troutbeck. "This is no sight for women's eyes; and we may not both go hence alive. There shall be one enemy of liberty less on the earth to-night, if God nerve this arm."

"Don't let him touch her," said Sir Robert furiously. "A Roundhead shall never come near a daughter of mine."

Roger, take home my daughter. Mabel, God's blessing on thee!"

Before she could reply, the duel had begun. Mr. Troutbeck, contrary to expectation, fought impetuously; and Sir Robert coolly and contemptuously, parrying with careless ease a succession of furious and hasty lunges, scarcely seeming to be willing to risk an attack on a thinner and more active man till he was in some degree wearied out.

The audience grew red-faced with shouting applause as Whig or Tory effected a thrust or parry of unusual dexterity. On a sudden Sir Robert assumed the aggressive, put in three swift thrusts, and then, receiving a slight flesh wound in driving off his enemy's sword, passed his blade through the fleshy part of his adversary's shoulder, who, staggering back, stumbled against a molehill, and fell heavily to the ground, amidst roars of approval from Sir Robert's Tory friends.

"My old trick, my old trick," said Sir Robert. "I knew I should have him. A Whig is never prepared for a new move; and that last stoccato of his was weakly put in." As the crowd of friends were gathering round the fallen man to see if he was able to renew the combat, a richly-dressed horseman came up puffing and blowing, his arms working, and his whole bearing full of full-blown bustle and importance; while a thin sallow ferret-faced man rode on a small pony close at his side, with a blue bag swollen with papers dangling like panniers on either side.

"Quite against the law, gentlemen," said the country justice; for such was the new arrival.

"3d Elizabeth, cap. 36," whispered the clerk.

"3d and 4th Elizabeth cap. 56 is against you, gentlemen," said the justice courageously; "and I must beg you to disperse. Sir Robert, I am astonished to see a gentleman of your years. Mr. Troutbeck, a person of your gravity,—you surprise me. Do not compel me; do not accelerate me into reading the Riot Act."

"3d and 4th James I."

"Eh, what? O yes, 3d and 4th James I., I am informed—"

"And 2d Car. I."

"And 2d Car. I. prohibit all riotous assemblies, and make all such gatherings treasonable. Don't drive me, gentlemen, to sign a mittimus."

"There's no occasion for statute-law," said Mr. Troutbeck, as the crowd opened and showed him pale and with his arm bound up; "nor any of your exertion of arbitrary and tyrannical power. I cannot lift my sword again to-day; but there'll come a time—there'll come a time." And so saying, he rose, assisted by his son, mounted his horse, and rode slowly in the direction of Troutbeck.

"One less for old Tony's procession," said Sir Robert, bursting into *Hudibras*:

"Alas, what perils do environ

The man that meddles with cold iron."

But he drew it on himself, and was never a good neighbour. I'm sorry, though, I decried the young fellow's stroke; 'twas well done; but never mind. Now Roger, join in the chorus:

"A hound and a hawk no longer

Shall be tokens of disaffection;

A cock-fight shall cease

To be breach of the peace,

And a horse-race an insurrection."

"Allow me to congratulate you, Sir Robert," cried a horseman, advancing from the crowd, "on your success over the old Whig, as I hear he is. I have seen something of sword-play, but never saw a thrust in tierce better put in. I am the bearer of a message from his grace the Duke of York; and I and my companion here, Colonel Claverhouse, having sought you at Crow's Nest, found you were out hunting, and came on hither. I am Mr. Churchill of the Second Life Guards. Allow me to introduce to you Colonel Claverhouse, just arrived from putting down disturbances in Scotland, and who is dying to be acquainted with so well known and gallant an officer as Sir Robert Darcy."

CÆSAR WITHIN.

BY THE AUTHOR OF "SYDNEY FIELDING," ETC.

THERE is a distinctive peculiarity about really great natures which causes them always to wear an aspect victorious. Amidst whatever strokes of misfortune or affliction may chequer the course of their lives, they are always self-possessed, amiable, and invincible. And this does not spring from the indifference of apathy, or a careless and unreasoning defiance of fate; but from a noble patience and philosophic heroism, which rise superior to chance and circumstance, and take from even the bitterest reverses a warning and a stimulation. In such persons is manifested the finest development of human nature, a maturity of moral growth, a perfect manliness.

The distinction stands apart from what we are accustomed to speak of as "special gifts," and indeed arises not only from moral excellences, but very frequently owes much of its existence to physical advantages. Where the distinction exhibits itself in a purely moral form, and without the auxiliary of physical perfections, it is so much the more grand and notable. Talent and genius are not its necessary accessories; it is as much exemplified amongst those who climb the mountain's side with dire plodding and labour, as amongst the lucky ones who, with pinions like the immortals, arrive at the summit by easy and brilliant flights.

O, happy they who possess this enviable constitution! who, amidst all vicissitudes and trials, rise superior to despondency and despair, and nobly maintain the Cæsar of self-possession enthroned within! who, beneath the bitterest strokes of misfortune and disappointment, can still support a sweet temper and a hopeful and unconquerable spirit, and lead their own captivity captive!

But alas, how few of us possess this strong and robust moral health! How few among us who do not find the evils of the passing days almost more than they can bear! Were it not for that merciful provision which causes us to forget our sorrows, to awake to each succeeding day with new thoughts and feelings, how intolerable this life would be to the great majority of mankind! Worthy old Sir Thomas Browne has wisely remarked in his beautiful *Religio Medici*:

"Darkness and light divide the course of time, and oblivion shares with memory a great part even of our living beings; we slightly remember our felicities, and the smartest strokes of affliction leave but short smart upon us."

Is not this true of the generality of people? Do we not find our sorrows heart-breaking and unbearable at first, and do they not soon pass away, leaving "but short smart upon us?" Do we not groan beneath every calamity that falls to our lot, imagine it to be a special trial, believe that all incentive to further exertion is crushed within us, and yet, a few days later, upon the slightest lucky turn, are we not ready to smile and declare that all is for the best? The cruel reverses that bowed us to the earth last year, do we not find it possible to regard them with equanimity now, and indeed feel ourselves quite unable to recal the acuteness of suffering that overwhelmed us then? The melancholy Cowper wrote,

"The darkest day,
Live till to-morrow, will have pass'd away."

And surely if the poet—at once one of the most gifted and melancholy of men—could enjoy the deliverance that each to-morrow yields to its yesterday, those more happily constituted should never repine.

Again, the worthy Sir Thomas Browne remarks:

"To be ignorant of evils to come, and forgetful of evils past, is a merciful provision in nature, whereby we digest the mixture of our few and evil days; and our delivered senses, not relapsing into cutting remembrances, our sorrows are not kept raw by the edge of repetitions."

True, indeed; and if we could only bear well in mind the transitory nature of all things in this life, and what will

form its inevitable termination—to all alike, to Dives as well as Lazarus—it would help us to acquire that dignity of temperament alluded to—an unceasing faith and trust in the omnipotent wisdom of the great Governor of the universe, and the inseparable accompaniments, patience, courage, and self-respect. For, as every man's thoughts and speculations are turned to that region of hope, the future, some of them must necessarily extend to the life beyond the present; and they are the best and the greatest among us who can calmly front and steer through the troubles and crosses of this world, fortified by the sweet and heroic virtues of the Christian, and by the glorious promise of the Christian's faith.

One of the most touching stories of patience, industry, and undaunted struggles with incessant and multiplying difficulties ever known, has lately been presented to the world in the *Memoirs of Charlotte Brontë* and her sisters. The whole great heart of society has been set throbbing by the most solemn and affecting narrative contained in Mrs. Gaskell's biography. What a series of pictures it presents from first to last, the whole culminating in interest, peculiarity, and power to touch the heart, until the catastrophe actually wrings the soul with agony! And all the while the moral of the book, of the lives it portrays, is of the highest order, illustrating, almost in every page, the beauty and dignity of some of the foremost Christian virtues. Amidst all the records of their cheerless home, their domestic miseries, their constitutional afflictions, their poverty, their many attempts to improve their position, their many disheartening failures, their patience, energy, and persistence, until at length success was won, but not, alas, until the grave was yawning for the tenderly-constituted heroines,—amidst all, the Brontë sisters rise and shine, through all defects, like spirits of virtue and genius. The world bows its head, and does sincere and loving homage before the youthful and much-tried trio. Never was the beauty of patience, industry, and persistence in duty more finely exemplified, than in the lives of these young ladies, at once strangely gifted and strangely afflicted.

The biography of Robert Hall is another fine story of a brave and heroic soul leading a life of ardent devotion to duty, amidst difficulties and afflictions the severest and bitterest. He, too, stands grandly up, amidst all the dark and painful features of his story, his gaze on high, his footsteps for ever in the difficult narrow path,—Cæsar enthroned within—his own captivity led captive.

Melancholy, despair, indulgence in grief, cowardice and weakness beneath affliction or misfortune, are nearly allied to sins; and, indeed, if severely and acutely examined, will be found to bear some relationship to blasphemy, as implying a censure of Providence, and a denial of the wisdom and mercy of God. We are here not for our own sakes alone, not to promote our own comfort and indulge our own feelings alone; but, in our course of probation, to render all the allegiance in our power to the grand attributes of our faith, to offer due homage to the Creator and Saviour by a worthy and useful ordering of our lives, and by doing our utmost to serve our fellow-creatures. I have observed that the happiest people in the world are generally those who are most useful in their sphere, who are always ready to do a neighbour a good turn, and also that such people invariably evince as much sagacity of mind as kindness of heart.

Among the many noble contributions of Addison to the *Spectator*, there is a paper on "Cheerfulness," in which the subject is so beautifully, so loftily treated, that one's mind is more refreshed, elevated, and encouraged by reading it, than by listening to a score of sermons:

"An inward cheerfulness," says the great essayist, "is an implicit praise and thanksgiving to Providence under all its dispensations. It is a kind of acquiescence in the state wherein we are placed, and a secret approbation of the Divine will in His conduct towards man. A man who uses his best endeavours to live according to the dictates of virtue and right reason, has two perpetual sources of cheerfulness in the consideration of his own nature, and of that Being on whom he has a dependence. If he

looks into himself, he cannot but rejoice in that existence which is so lately bestowed upon him, and which, after millions of ages, will be still new, and still in its beginning. How many self-congratulations naturally rise in the mind, when it reflects on this, its entrance into eternity; when it takes a view of those improvable faculties which, in a few years, and even at its first setting out, have made so considerable a progress, and which will be still receiving an increase of perfection, and consequently an increase of happiness. The consciousness of such a being spreads a perpetual diffusion of joy through the soul of a virtuous man, and makes him look upon himself every moment as more happy than he knows how to conceive. . . . We find ourselves every where upheld by His goodness, and surrounded with an immensity of love and mercy. In short, we depend upon a Being whose power qualifies Him to make us happy by an infinity of means; whose goodness and truth engage Him to make those happy who desire it of Him, and whose unchangeableness will secure us in this happiness to all eternity. Such considerations, which every one should perpetually cherish in his thoughts, will banish from us all that secret heaviness of heart which unthinking men are subject to when they lie under no real affliction; all that anguish which we may feel from any evil that actually oppresses us; and establish in us such an even and cheerful temper as makes us pleasing to ourselves, to those with whom we converse, and to Him whom we were made to please."

Let the timorous and despondent read these fine and vividly-expressed thoughts, and take heart again. They form but a fragment of the essay; and though they are by no means the best,—there being a rare equality of merit throughout the whole performance,—they are good specimens, and, we trust, will tempt the reader to study the composition in its entire form for his own pleasure and profit. All the compositions of Addison teem with this bright and wholesome philosophy. We rejoice in the surety of their immortality, in the certainty that our posterity, generation after generation, will profit by them; they are calculated so expressly to strengthen, ennoble, and sweeten the nature of every reader, and they are written so pleasantly, and yet with so much force, that few who read can fail to lay them to heart. Addison himself was one of the most beautiful characters that ever trod this earth,—a true Christian gentleman, genial and elevated, through every phase of his life, in every line his genius prompted. And be it remembered, that he—this cheerful and placid one—no more escaped his trials and sorrows than his fellow-creatures; but amidst them all, however severe and bitter, he always turned a serene and hopeful face to the world. His career was one of constant vicissitudes of fortune up to the few last years of it; but the self-respect and dignity of the Christian gentleman never failed him. When, in 1710, upon the overthrow of the Whigs, and the accession of the Tories to power, he suddenly found himself deprived of place and pension, and at a time when he had just suffered large pecuniary losses,—and when, moreover, he stood most in need of fortune's favours to promote his suit with the Countess Dowager of Warwick,—he quietly accepted his fate, and turned his thoughts upon procuring a subsistence by his old profession of tutor.

"He told his friends," writes Macaulay, "with smiling resignation, that they ought to admire his philosophy; that he had lost at once his fortune, his place, his fellowship, and his mistress; that he must think of turning tutor again, and yet that his spirits were as good as ever."

Most notably he was one of those who can lead their own captivity captive; who could, under whatever straits, be Cæsar unto himself.

Especially to young men,—and, above all, to those whose maintenance through life will depend upon their own labours,—should the cultivation of a spirit of self-reliance and unfailing trust in Providence be recommended. Disappointments and reverses fall to every lot. Nor man nor woman ever passed through life unscathed by these. It should, therefore, be our grand object to study how to bear them in a manner becoming to the proper elevation of human nature, both in the sight of God and our fellow-creatures. If we fail to-day, let us not be altogether cast down; let us still preserve a courageous heart, for we may succeed to-morrow. If our enterprise meets with checks

and difficulties, still let us not desert it and give way to despair, but knock again and again, remembering that constant droppings will pierce a rock, and cherish our perseverance and patience. Let us consult the pages of the *Biographical Dictionary*, and note how the greatest men have invariably been the hardest workers, and how nine out of ten of them have had to encounter tremendous obstacles, only achieving success and fame by dint of incessant labour and unconquerable determination. If our labours fail to secure their due reward, still we shall enjoy that delicious self-approval which honourable industry always begets; and even if cruel straits and difficulties fall upon us, we shall have the respect and sympathy of our fellow-men, which, by the way, the idle, discontented, and apathetic never obtain. There is an excellent maxim, which says, "If we pursue good with labour, the labour passes away, but the good remains; if we pursue pleasure with evil, the pleasure passes away, but the evil remains." Let us make our election, and work to the highest purpose we may, never permitting the abdication of the "Cæsar Within."

"Not enjoyment, and not sorrow,
Is our destined end or way;
But to act that each to-morrow
Finds us farther than to-day."

FLOTSAM AND JETSAM.

MONSIEUR Charles Marcotte de Quivières has written a graphic and amusing volume, which he has entitled *Deux Ans en Afrique*. A translation of this (with the consent of the author and the publishers, who reserve their rights) into English would obtain, I think, a decided success amongst our numerous lovers of light reading and entertaining sketches of foreign life. Almost all its episodes are brief; and I detach one of the shortest, just to give the reader an idea both of the difficulties that painters have to contend with, and

HOW A "HOLY FAMILY" IS SOMETIMES COMPOSED.

While I remained in the environs of Hyères (says M. de Quivières) I occupied rooms in an old chateau called Léoubes, said to have been built by Queen Jeanne. It was a delicious retreat, completely isolated. The only stranger who ever joined our patriarchal table was an honest curé of the neighbourhood, who came to say mass in the chapel on Thursdays and Sundays. This chapel reminds me of past transgressions, which I may as well confess at once.

During a stay which I made at Toulon in 1842, my sister's mother-in-law begged me to compose a grand altarpiece for the chapel of Léoubes, which was then undergoing restoration. She fixed upon the subject. She wanted a St. Joseph, a Virgin, and the Infant Jesus, and a crowd of angels' heads, in the style of Murillo. That, and nothing else, would please her.

When she had made her conditions, I laid down mine. In the first place, I made a strong opposition to the little angels' heads, which were likely to give me a deal of trouble. Madame insisted; she stuck hard and fast to the angels.

"You will arrange all that," she said, "in such a way as not to be obtrusive in the picture. You can put them out of sight; you can screen them with something."

I accepted the commission, which would bring me in a musical mass, the benedictions of a great number of devout persons invited to the re-opening of the chapel, and an unlimited extent of plenary indulgence. I set to work. I had reserved the right of selecting my own models. One of my sister's nieces, with rather strongly-marked features of the southern type, had one of those pure and calm countenances which was just the thing to inspire my pencil. She consented to sit for the Virgin. My sister had lately presented me with a nephew, a plump, fresh, and rosy boy, who seemed to have come into the world expressly to figure in my picture. I was therefore provided with my Infant Jesus.

But where was I to find St. Joseph? I was anxious to produce a conscientious work. I wanted my composition to bear the stamp of a truthfulness in conformity with the idea which certain persons have conceived of a family composed of a virgin who is the mother of a child who is not the son of his reputed father, and of a father who is not yet the husband of his wife; the whole, nevertheless, forming but a single and the same family.

While perplexed with these deliberations, I passed my left hand through my beard; and, on accidentally glancing at a looking-glass opposite, I perceived—St. Joseph, who appeared to be buried in deep reflection on the difficulties of the situation. I snatched up my crayon, and rapidly sketched, without stopping till I had finished, my St. Joseph, who perfectly combined all the conditions required for the personage of my picture. I had a father, a virgin, and a child, all belonging to the same family. As to the angels' heads, after having drawn, rubbed out, made and remade two or three around my group, I at last decided to screen them behind a palm-tree, whose branches entirely hid them from view. The background of the picture was a romantic site close to Léoubes; so that my "Holy Family" had altogether the air of a local production.

The old lady's turn to inspect it came. Scarcely had she set eyes on the picture, when she worked herself into a pious rage.

"What have you been doing there?" she cried; "the portrait of Zoë? I can never allow that. I love my granddaughter very much, but I will never consent to go down on my knees before her. It would be the height of impropriety. Alter that head."

In vain I insisted, explaining to her my notion of a Holy Family, and reminding her of my conditions; she would not hear a word.

"No," she said; "I never heard of such a thing as that a grandmother should go down on her knees before her own granddaughter."

I was obliged to yield; and I promised to make some alteration in my Virgin.

"And my angels," she continued; "where are they? I cannot see them any where."

"But that point was settled between us," I said. "It was agreed that the heads should be placed in such a position as not to be seen. Very well; you don't see them. They are screened behind the palm-tree, although they are trying hard to peep through its foliage."

I had a hard task to convince her; but as I had yielded in the matter of the Virgin, it was only fair for her to make a few concessions in respect to the cherubim. In short, my picture, magnificently framed, was ceremoniously carried to Léoubes; and a grand musical mass, accompanied by a distribution of medals, consecrated the holy work of the great master. In spite of this sort of canonisation, I can scarcely help laughing when I look at my own portrait in the costume of St. Joseph; and I confess that I now experience, in respect to myself, the same scruples that grandmamma felt touching her granddaughter. I really make up my mind to go down on my knees seriously before myself.

E. S. D.

THE FAMILY COIN-CABINET.—GOLD NOBLES.

In my capacity of amateur numismatist to a pretty extensive circle of friends, I was called upon the other day to explain

the Latin legend of a curious old gold coin, of which the possessor was unable to make good sense in his attempted translation. The coin was one of those fine old pieces of money so graphically termed "broad pieces," after the introduction of the more modern coins produced by the mill and screw process, which, being thicker than those made by hammering, were of course less "broad." It was, indeed, one of the earliest specimens of the "broad-piece" class, being a "half-noble" of the reign of Edward III.

After the departure of the Romans, no gold had been coined in England,* with the exception of the small experimental issue of gold pennies of Henry III. till the reign of the third Edward. The Plantagenet stem seemed to have attained its full height and strength in the person of that prince; and the thorough blending of the long antagonistic Saxon and Norman races at that period, both in manners, customs, and language, was productive of a knitting of the national vigour and character, of which that of its prince formed one of the most striking illustrations.

In the year 1344, it was determined to issue a gold coinage, and one too that should be worthy of the growing greatness of the country. The young king's claim to the throne of France, and his brilliant successes in the prosecution of his claim, had greatly raised England in the scale of European nations; and the development of her national wealth had kept pace with her military renown. It was, as stated, in the year 1344 that the famous gold nobles were issued; but a smaller gold coinage of pieces termed florins had been previously essayed, which, however, neither satisfied the people nor the sovereign. It was therefore determined that the new issue should be superior to any gold coinage in modern Europe up to that time. These determinations were fully realised by the issue of nobles, half-nobles, and quarter-nobles; the full noble passing for 6s. 6d. The noble of the first issue weighed 136 grains troy, and was consequently of the value of about 24s. of our money.

The device of the obverse, unlike the characterless heads of the previous coinages, was a striking design, formed by the full figure of the king standing in a ship, a shield with the quartered arms of England and France on his left arm, and holding a straight sword erect in his right hand, as shown in the engraving No. 1. This device is supposed by some antiquaries to have been adopted in commemoration of the great naval victory obtained over the French fleet on Midsummer-eve 1340, when the two French admirals and 30,000 men were slain, and 230 of the largest vessels captured. Others, however, suggesting that a ship was a Roman emblem typifying "the state," consider it probable that the king at the helm of the ship of state may have been intended by this device. Others imagine that the British sovereignty of the seas is alluded to; which, however, is an hypothesis scarcely tenable, as Edward's claim to that sovereignty was not asserted till the year 1359, fifteen years after the first issue of the nobles. The legend which surrounds the device is well wrought in finely-formed

A GOLD NOBLE OF EDWARD III.

Gothic letters, and stands, EDWARD·DEI·GRA·REX·ANGL·Z·FRANC·D·HYB·, in some cases still more abbreviated. Supplying the letters omitted, it reads, EDWARD(VS)·DEI·GRA(TIA)·REX·ANGL(LÆ)·FRANC(LÆ)·D(OMINVS)·HYB(ERNIÆ) ("Edward, by the grace of God King of England and France, Lord of Ireland"). The inscription sometimes reads, "Lord of Ireland and Aquitaine." As the mode of distinguishing kings by numerals following the name was not then adopted,* it is rather difficult to assign the silver coins of the first three Edwards to their respective issuers; no such difficulty, however, occurs with the gold, that of Edward III. being the first that was issued. Another peculiarity in the inscription is the introduction of the words "Dei gratia," which then appeared for the first time on

the English coinage,† probably in allusion to his pretended accession to the throne of France, to which inscriptions on subsequent gold issues also refer.

With the establishment of the gold coinage a complete revolution in the legends of the reverses of the coins was effected, some text from Scripture—very frequently from the Psalms—being generally adopted, to the exclusion of the name of the place of mintage, which, however, still kept its place on the silver coinage. On the nobles, the motto or legend on the reverses of the first issue was, as shown on the specimen engraved, IHS·AVTEM·TRANSIENS·P·MEDIV·ILLORVM·IB·, which, supplying the abbreviations, should read, JESVS·TRANSIENS·PER·MEDIVM·ILLORVM·IBAT ("Jesus, passing through the midst of them, went away").‡ This passage had been long before adopted as a talisman of preservation in battle, and also as a spell against thieves; and has therefore been deemed a most happily selected motto for the first issue of valuable gold coins. It was no doubt considered highly appropriate, as it was continued on the nobles of succeeding reigns; and afterwards on the *rials*, and other coins, by which the original nobles continued to be represented.

The half-nobles of Edward III. had at first the well-known passage from the 6th Psalm, *Domine ne in furore tuo arguas me* ("Lord, rebuke me not in Thine indignation"); which in some cases was "blundered," as the numismatists have it, by the engraver, the *ne* being left out, which of course entirely changed the sense of the passage. It was this "blundered" legend which had so puzzled my friend.

The second illustration is a gold rial of the reign of Elizabeth, one of the last representatives of the noble, on which the device of the king in the ship is still continued, though in this case the sovereign is necessarily represented in petticoats. The coins of James I. were the last exhibiting this device, and by the mill and screw introduced in the reign of Charles I. a better executed coinage soon prevailed. The picturesque old broad pieces, however, remained in circulation as late as William III., and were much sought by goldsmiths and others for gilding purposes, as being of purer gold than the modern money.

H. N. H.

* Except in the case of the silver penny of Henry III.

† With the exception of the disputed groat of Edward I., which is possibly a coin of the third rather than the first Edward.

‡ See Luke iv. 30.

SPECIMENS FROM RECENT EXHIBITIONS: NO. XIX.

PAINTED BY JOHN PHILLIP.

THE SALUTE.

THE SALUTE.

By JOHN PHILLIP.

THE urbane and gallant lounge before us has been enjoying his evening cigarette,—and with true Spanish delight in the luxury of the *dolce far niente*, has been happy all day, doing nothing but listlessly stroll on the shady side of El Prado, if the locality of the picture be in Madrid, varied with an occasional game at dominoes with some equally energetic personage—a game which most Englishmen think dull and childish, but, “*Que voulez-vous?*” it passes the time, and that is all they desire. We suspect, however, from the pattern and texture of the nondescript garment which serves the purpose of a coat with the gentleman, that the scene is rather in Cadiz; for these are evidently derived from the noble race of the Arabs, whose long dominion in the south of Spain has left deep traces upon their successors, a race inferior to themselves. In Cadiz be it. So we guess he has reclined since his *siesta* at full length somewhere by the harbour, which is the fairest of the fair, and indolently let his eye range about the most glowing bay; knowing little and thinking less how over those golden waters the fleets of many nations have ridden, nations of whom his ancestors were lords paramount. If he thought of this at all, can we think it was without shame to know how his country's glory has departed?

Haply as the sun sank he thought a dance would be an agreeable finish to a day whose morning was idle, whose noon a doze, and whose afternoon spent in indolently watching the clouds, the sea, and the smoke of his own cigarette. Upon the thought he rose, shaking himself so that his dress fell about him like a king's robe, and then sauntered magnificently along. He strolls through several streets, traversing blazing sunshine and black shadow,—looking like a fire-fly in the light, and like a beetle in the shade; down some of the streets he caught glimpses of the harbour, blue as heaven; down others glanced into a murky district, filthy and wretched beyond parallel in any capital but Constantinople. On the one hand, what nature gave, and on the other, what man has made of it. Onwards he went to a certain market-place, where, by a fountain amongst the fruit-stalls, he knew he should meet a damsel who would also at that hour be looking for a partner. There she is, good reader, fan in hand, shawled, ear-ringed, her hair almost blue in intensity of blackness, and, like himself, heartily idle. Garmented in all tawdry finery, she is half an animal (though a fine one); for see her coarse flat nose, her foolish forehead, and gross mouth. This is the picture, then. He, with the grace of a true Spaniard, taking off his hat, inquires, “Will she dance?” Of course she will; the end of her existence is dancing, her thoughts are only of dancing; she was born but to dance, and dance she does. So we will leave her, with the prospect probably of joining in the humane amusement of a bull-fight, as suggested by the placard upon the wall.

We have endeavoured to lead the reader's thoughts to the subject of this picture in order to bring before him what seems to be the painter's object in depicting an example of the manners of one class of the Spanish nation,—fancying, doubtless, that at some future time, when all these things have changed, this record of his pencil might have value with men.

Something of this sort has evidently been in the mind of the painter; for we have observed a systematic and consistent choice of subject in his pictures for some years past. He has chosen Spanish character to delineate, and taken, as the predominating motive of his works, that phase of it which we, for want of a better word, call humour. In a technical sense, these labours are most admirable; the rich broad vigour of colour, the power of telling the tale which he constantly evinces, and his remarkable gift in rendering expressions proper to the subject, are such as to place him in a position very high indeed amongst the painters of this age who can in any sense be said to exhibit original and powerful minds labouring to a set end.

L. L.

A VISIT TO CARTHAGE.

By BESSIE RAYNER PARKES.

How many people of mature years, having read the Roman history in their youth, and having carried away from that austere field of learning many noble legends, and not a few theories of social life, have any clear idea of what they would see if they went to the site of the city of Hannibal?

A general impression appears to exist that the very place of its foundation is uncertain, and that all vestiges of the great maritime metropolis of antiquity have passed away. Nineveh has rendered up her tale of burnt bricks; and the gigantic basements of the temples of Baalbec are still an inscrutable amazement to modern engineers. To the traveller who stumbles amidst the forest-tracks of Central America, the richly sculptured monuments of Mexico record a principal civilisation whose lineage is unknown. Thebes and Memphis yet rear their massive columns from out the drifted sand. Rome has her Mamertine prisons, half-built, half-scooped from the living rock; her Cloaca Maxima, her Servian ramparts, yet attest the public spirit of the early Tarquins; and torches let down into the foundations of the Capitol reveal the huge steps of that secret staircase trod by senatorial feet two thousand years ago. The Parthenon, now shattered in its fair proportions, stood nearly perfect on the Acropolis until the century before last. Not until 1687, when it was used as a powder-magazine by the Turks, at the time of the city being besieged by the Venetians, could the Temple of Pericles and the shrine of Minerva be said to be fairly ruined. But Carthage, which was a great city when Rome was but a herdsman's village; Carthage, the daughter of Phœnicia, whose lineage stretches back into the dim morning-twilight of time; Carthage, the wealthy, the ambitious, the luxurious, she who sent out armies to the fields and galleys to the great waters, and whose founder was a priestess-queen,—what is she now? I will tell you, for I have seen her:—a wide grassy plain, slightly raised above the level of the blue Mediterranean; an uneven, desolate, dangerous plain, covered for miles with lumps of ruin, mere cairns of stone tumbled together, where the traveller must pick his way with heedful steps, lest he fall unawares into some yawning chasm,—the cellar or the water-cistern of a Carthaginian house, or perchance the very dwelling itself, lying far beneath the level of the accumulated soil; a mere gulf of blackness and death to the unwar. And this is Carthage.

I had come from Algiers, coasting eastward along the north of Africa in a French steamer, which stayed some hours at each principal port,—at Bougia, at Philippeville, at Bona, and finally at Tunis. The steamer was advertised to leave Algiers on Tuesday, the 10th of March; but the Mediterranean had lashed itself up into such a state of fury that the captain did not dare put forth. In twenty-four hours the sea, though still running heavily, had so far subsided that we started; but what occurred during the next twelve hours deponent sayeth not, being only able to cast occasional hurried glances at the mountainous borders of Kabylia, their snowy tops seen through driving mist. Much of Kabylia is still unconquered by the French; though lying in the very heart of the colony, its rocky fastnesses protect its warlike mountaineers, who boast themselves the aboriginal unsubjugated race, whom neither Roman, nor fiery Arabian Moor, nor glory-loving son of Gaul, have yet enslaved beneath their yoke. The Kabyles are in many respects the best of what may now be roughly termed the native races. They congregate in villages, and do not live a nomad life. They dwell more in huts than in tents; and they display a remarkable aptitude for handicrafts and manufactures, fashioning and even engraving gun-stocks and barrels; for they are workers in metals, like Tubal Cain of old.

Early on Thursday morning we had left the shores of their territory, and landed at Bougia, once a large Roman city, and still retaining, in its fragments of massive wall and one

perfect arch, the trace of Roman occupation. A great many monkeys are said to inhabit the hills at the back of the town, and we saw two tame ones playing in the garden of a private house. Midday, we steamed off again; and at dawn on Friday found ourselves at Stora, the little port of Philippeville. The latter town lies also at the water's edge, some three miles off; but for some reason it is not safe for boats to run up to it. It has never been a Moorish, but was once a Roman site. There are immense cisterns high up behind the town, which have been roofed in by the French and restored to full efficiency. There is also a fragmentary amphitheatre, whose stone seats and semicircular wall form part of the playground of a boys' school; and before the church stands the statue of an imperial Cæsar, nameless and noseless, but supposed to be Hadrian. Every relic of antiquity possessing real interest has been sent off to France.

At Philippeville I had to remain nearly two days, for the steamer goes no farther,—if I remember rightly, it turned north for Marseilles,—but on Saturday came another, which started in the evening for Bona; for the plan of Mediterranean steam communication is always that the vessels travel by night, halting by day to pick up passengers and merchandise and to unload stores; for of course all the luxuries, and many of the necessities, of life are brought from France. I remember how red the sunset was that night over those wild African hills, the richness of the wayside flowers, as the kind consul drove me himself to Stora by a road that wound close to the edge of the beautiful bay.

At Bona, next morning, there was plenty of bustle, Sunday though it were. There is a large Arab population, and it seemed to be market-day for them outside the town; inside, the bells were ringing for early mass, and all the French were abroad. One of the ship's officers, a certain M. Pijon, who had travelled in the east the year before with Mr. Holman Hunt, very kindly took me on shore to see the long line of a Roman aqueduct at the back of the town.

We passed a large party of barelegged creatures in bernouses, chaffering round a sorry white horse, which was "going, going, gone" for a sum of money equivalent to 5*l.*; others were buying and selling edibles, and all the strange bodily gear in which half-savage nations delight,—articles made of leather, and cord, and coarse coloured cloth, of such shapes and sizes as no European could invent for a prize. As a dead contrast, I remember trying to find some readable literature in Bona to while away the many days of sea-travel that yet lay between me and Italy, and that I could get nothing but immense, yellow, double-columned French novels, with pictures of very fine gentlemen on their despairing knees to very fine ladies in Parisian salons. It was at that wild and wonderful Bona, on a Sabbath morning, the clear chime of the Catholic bells rising above the Arab clamour, that I came across *Marguerite, ou les Deux Amours*, by the fair and witty Delphine Gay, the Corinne of France, afterwards Madame de Girardin; this was a story of a fair young lady who was sought in marriage by two equally devoted lovers, and who, reversing the sad plight of Captain Macheath in the *Beggar's Opera*,

"Could be happy with neither away;"

and being finally married by the most obstinate of the two, heard that the deserted man had shot himself, and died *herself* on her wedding-day—"of worry," says the unromantic English reader.

It was likewise at Blidah, famous for its orange-groves, under the spurs of the Atlas, that I came across *Ruth, par Madame Gaskell, auteur de Marie Barton, etc.*; while the military band was drumming and fifing with might and with main all sorts of wild and warlike melodies, uncongenial enough to the clacking mills of Manchester, or the purple hills of peaceful Wales. Nowhere does the penetrative power of literature appear in more impressive contrast than in the French colonies of Northern Africa. As I looked round the place, where Jews, Arabs, and *militaires* were sitting in pairs upon the benches, I felt a great temptation

to buy *Ruth* there and then, and present it, with its African perfume of orange-blossoms, to "Madame Gaskell," and was only deterred by the idea of dragging the volume over sea and land for some 1500 miles, ere it could reach its English destination.

Another great contrast of these African towns is seen in the shops for the clothing of the different sections of the population. In one magazine are bernouses, leather shoes of bright red and yellow, rope girdles, coarse cloth jackets inlaid with gaudy stars, and Jewish coifs and stomachers rich with gold thread. Round the corner is a little French *modiste's*; Paris collars and ribbons, light kid-gloves, lace, coloured silk-handkerchiefs, and a handsome French baby, sitting up as good as gold, in splendid bibs and tuckers, its wide open eyes taking accurate note of the phenomena of French colonisation in Algeria.

But I am wandering a long way from Carthage, from which I am yet only a "day's journey." But it is a very different day from that of the Patriarch; being the evening and the morning of a very good French steamer. We left Bona at noon, passing on our way to the boat many parties of Arab women, stalking about in a ghastly blue costume, swathed up from head to feet, only *one* eye peeping out to enable them to pick their way over the rough alleys.

Leaving the harbour, we sailed past the site of ancient Hippo, where lived and died one of the greatest Fathers of the early Christian Church—St. Augustine. Some huge ruins, apparently those of water-cisterns, yet remain, and a tomb which bears the name of the saint; but his body is believed to be at Pavia in Italy. It is recorded that, on the siege of Hippo by the Vandals under Genseric, St. Augustine prayed to God that he might be taken away before the city fell into the hands of the enemy. Whereupon he was cut off during the siege by a violent fever. This was in the year 430.

We left Bona at noon, March 16th. The day was calm and lovely, and never shall I forget how twilight fell that evening. The heavens were divided as into two opposite camps of light and darkness, sunset and night, with a sharpness of division at the zenith wholly unknown to our northern latitudes; and when Venus rose, she cast a long track of light upon the sea. It was nearly the date of the brightest night of her brightest year, and I sat on deck till the heavy dews fell drenching round me, and the western glow had faded into the blue gloom. When at length I went below, I found all the officers and ship's passengers assembled round Herr Max Böhrer, the famous German violinist, who was unpacking his beloved instrument much as a mother would lift her child from its cradle; and there he sat and played "Home, sweet home," "Yankee Doodle," "Partant pour la Syrie," and "God save the Queen," till full night fell upon the shores of Africa, and shrouded the wild hills from even the man at the helm. When I awoke, we were at anchor in the Bay of Carthage.

AN OLD MAID'S ROMANCE.

BY HOLME LEE, AUTHOR OF "GILBERT MESSENGER," ETC.

IN every life—even the quietest, even the least disturbed and eventful—there must surely be some little vein of romance, some golden vein in the earthy ore, if we might be permitted to trace it in the sunshine. I do not like to think that any of the thousand throbbing, hoping, fearing hearts I meet can be all clay, all indurated selfishness; the hardest, most unpromising people, for aught we know, may have acted long romances in their own proper persons, and have grown cold and passive after them to a degree that would lead one to believe they had never felt.

There was Miss Fernley of the Bankside, for instance, a maiden lady of immense antiquity, whom we used to visit when I was a little girl. She lived in a large, genteel, red-brick house, enclosed in a stiff garden, with a great iron gate guarded by grim stone lions on either side. Miss Fernley

was precision and neatness personified, but her parlour was intolerably dull and gloomy; moreover, it was infested with three of the surliest cats I ever knew, and a parrot, the most vixenish of its race. I remember with awe the solemn tea-party, to which all the children of her acquaintance were annually invited. Depression fell on my spirits as the gate clanged behind me; by the time my bonnet and cloak were taken off I was rigid; and when I was sat down on a stool, at a considerable distance from the fire, but within reach of the cats, I was petrified into stupidity for the rest of the night. Miss Fernley delighted in me accordingly; she was accustomed to say to my mother, that "I was such a quiet prettily-behaved child;" and in consequence she often sent for me to spend the afternoon on Saturday half-holiday, giving as a reason that she liked company. She was a kindly, ceremonious, old lady, with no idea whatever of amusing a child. Every time I went she gave me an old brocaded-satin bag filled with ends of worsted and silk for tapestry-work; these she bade me sort out into packets according to colour; and when she had done that, she let me alone until tea-time. Once I abstracted from its shelf an illustrated copy of Bunyan's *Pilgrim's Progress*, in which Apollyon was represented as a handsome Crusader in scale-armour, standing on prostrate Christian. I did admire Apollyon, he was so grand, and had such wings; but an audible remark to that effect caused me to be immediately deprived of the book, and in all subsequent visits at this period my attention was divided between the end-bag and the cats.

Miss Fernley's parlour never underwent any change. If one of her pets died, it was replaced by another of the same sex and colour. All the cats were king-cats, and gray,—and they did spit sometimes! The wainscot was painted drab; the straight-backed, slender-legged chairs always stood primly up by the walls; the heavy sofa preserved its angle by the fireside as if it were fastened to the floor; and the discordant old piano was for ever open. I used to perform upon it a line and a half of "Paddy Carey," the only tune I knew without music, every time I went. Later in life, I did the "Caliph of Bagdad" and the "Battle of Prague," to Miss Fernley's delight; and I remember her once singing to me, with the remains of a very sweet voice, "The Woodpecker tapping," and a little Spanish air.

There were two circular portraits in this room of Miss Fernley's brothers, both in uniform; the elder had been drowned at sea, and the younger killed at the battle of Talavera. She loved dearly to talk of these two brothers, when once she had begun to be confidential, and would quote a great deal of poetry in her narrative of their histories; I believe she grew to love me for the interest with which I always listened to the oft-told tales. It probably never occurred to me until some years later to think whether she were a pretty or an ugly old lady; she was tall, thin, stiff; scantily dressed in silks of a uniform cloud-colour, with a lofty-crowned cap with a good many white bows; she wore a frill of fine rich lace about her neck, and ruffles at her wrists when nobody else did, and had a particularly precise and almost courtly air—I should say she was proud; and one bit of ceremony always observed by me to the day of her death was, never to sit in her presence until invited to do so. She made many remarks on the manners of her young friends, and always said that familiarity was vulgar.

The way I became acquainted with the life-romance of this gray, lonely, old lady was as follows. She invited me to take up my abode at her house for a week when I was about sixteen, to be company for three madcap girls, her nieces, and daughters of the younger brother whose portrait decorated the dismal parlour. Their exuberant spirits were very trying to Miss Fernley; they outraged the cats by dressing them up in nightcaps and pocket-handkerchiefs; they taught the parrot to be impertinent, broke the strings of the old piano, whistled as they went up and down stairs, and danced threesome reels in the hall, to the great scandal of the primmy old serving-man and serving-woman.

One long wet day their pranks went beyond all bounds; they wanted to act a play in the drawing-room, and to bribe them from their intention, Miss Fernley gave them the key of a great lumber-room, and bade them go and ransack the chests of ancient apparel therein contained for amusement. Up we all accordingly went. Out upon the dusty floor, with screams of laughter, the wild girls tossed armfuls of garments of all degrees of hideousness and antiquity; startled sometimes by a moth fluttering out from the heaps, and arrested often by the sight of some article of attire more curious than the rest. One of them—Letty, the youngest—lit upon a sacque of crimson silk, and immediately cried out that she would dress up, and astonish Aunt Jeanie. Her costume, when completed, was rather incongruous; but a quaint old mirror against the wall showed her a very pretty, if fantastic figure, draped in the crimson sacque, with amber-satin petticoat, and a black Spanish hat, with a plume shading down over her golden hair. Lettie Fernley was a bright-complexioned Scotch lassie; and as she walked a stately step before the glass you might have thought her a court-beauty of fifty years ago stepped down out of a picture-frame.

Meantime the eldest sister had been pursuing her investigations into the depths of a huge black trunk, and drew forth a packet of letters tied round with a faded rose-colour ribbon. "What have we here?" cried she; "a mystery, a romance; somebody's old love-letters!"

In an instant Lettie, still in the crimson sacque, was down on her knees by her sister, full of vivid curiosity.

"Gently, gently," said the other, turning aside her impatient fingers; "let us consider a moment before we disturb old memories. What hand traced these discoloured characters? Is the hand dust yet, or only slow and heavy with the dead weight of age?"

"Have done with your speculations, Minta, and let the letters speak for themselves," interrupted Lettie eagerly.

Minta loosened the string, and divided the packet carefully. A piece of printed paper fell to the floor: it was a column cut from a newspaper; the story of a great battle, and an incomplete list of killed and wounded.

"Let us lay that aside till we seek a clue for it,—till we see whose name on that list is connected with these letters," suggested Minta; and we all approached our heads close together to read the faded yellow pages. The first letter was written from a vicarage-house in Cumberland, and bore date half a century ago; the writer was one Francis Lucas. We had never heard the name before; but we connoised the lines lingeringly and with interest, for they were such as all hearts echo to—warm, loving, tender.

"Francis Lucas, whoever you may have been, one thing is sure," said Minta, as she read; "you were a gentleman and a true knight of dames. I can picture to myself the blushing face that fifty years ago bent over these lines, and laid their sweet promises away in a heart as worthy as your own."

We paused long over that letter; for its speech was so full of life and love and hope, that we were loth to put it away amongst the things of the past,—almost as loth as must have been the "darling mouse" to whom it was addressed: it still breathed the same old song of love and trust which is never out of date, and sounded as true as earnest passion ever does. There were seven letters with the date from that vicarage amongst the Cumberland Fells; the last spoke of a speedy meeting in words that thrilled all our maiden pulses.

"O, Francis Lucas, I hope you were happy with your 'faithful heart,'" cried Lettie. "I hope you live yet in a green old age together amongst those wild bleak hills."

The next letter was written after an interval of two months, in May 17—. Francis Lucas was then a volunteer in the army in Flanders; and his bright glad words reflected the high courage which he knew "would make his darling love him more." Those were his words. There was but one other; it was very short, written on the eve of battle, and it was the last.

"O, Minta, I could weep for that 'faithful heart,'" said Lettie, with tears in her eyes. "Look at the list now; it is no longer a sealed page to us; there is his name,—'Francis Lucas, killed.' There the story ends."

"But the 'dear mouse,' the 'faithful heart,' who is that?" asked Minta, turning the yellow paper over, while Lettie idly twisted the ribbon that had tied the letters together,—"who can it be?" The moisture cleared from our eyes slowly; more than one great tear rolled down my cheeks.

"It is Aunt Jeanie, Aunt Jeanie!" suddenly exclaimed the second sister, who had read in silence. "You remember, he says 'darling Jean' in the first letter."

"Aunt Jeanie," echoed Lettie. "O, I wish we had not been so curious; it was very wrong of us!"

"But who could have thought there had ever been a love-story in her quiet life?" said Minta. "How beautiful and how nice she must have been! I dare say she might have been married over and over again."

"I am glad she was not; I shall like to think of her as Francis Lucas's 'faithful heart' better than as the richest lady in the land."

"And so shall I; and O, Minta, how we have plagued her! Help me off with this red thing," said Lettie, pulling at the crimson saccue. "It would be profanation to go to her jesting, after what we have just found out. Dear Aunt Jeanie! If she has had a faithful heart, she must have had a suffering one too."

The door opened softly, and Miss Fernley looked in. "Children, you are so quiet, I am sure you must be in mischief," said she, in her gentle voice. She came amongst us, and looked over Minta's shoulder as she sat on the floor with all the papers scattered in her lap; stooping, she took up the strip of newspaper, and gazed at it through her spectacles; I saw her lip quiver, and her hands tremble.

"Where did you find these letters, children? You should not have opened that black trunk," said she hastily. "Give them to me; have you read them?"

"Yes, Aunt Jeanie," replied Lettie penitently. The old lady took them from Minta's hand without another word, and left us to our researches; but we had seen enough for one morning, and quickly restored the old dresses to their dusty receptacles, and left them to the moths and the spiders.

When we descended to the parlour, rather subdued, and ashamed of our curiosity, we found Miss Fernley rummaging in an ancient Japan cabinet; she brought out two miniatures, and showed them to us; one was Francis Lucas, a young gay-looking soldier, the other was herself. The latter bore a marked resemblance to Lettie, only it was softer and more refined in expression. Then she told us her love-story,—how she was to have married Francis Lucas on his return from that fatal campaign, and how she had consecrated to him, in life and death, her faithful heart.

"O, Aunt Jeanie, I may be like you in the face, but if I were to live to be a hundred I should never be as good or as kind as you are!" cried Lettie as she finished. And this was the romance of old Miss Fernley's youth.

ANCIENT SCOTTISH SUPERSTITIONS.

I.

Few countries are richer than Scotland in old legends and the lingering memory of ancient superstitions. Ireland, Brittany, the remoter parts of Hungary, and the wild districts of Spain, are all fertile sources; but Scotland is equal to any of them, both in richness of material and in picturesque arrangement. We propose to sketch out a few of the most striking instances of what was once believed and practised in Scotland—that land of mingled credulity and logical acumen; where the critical faculty comes in as an aid to superstition, and where men demonstrate mathematically the necessary properties of a chimera.

Of course a belief in the power of the Evil Eye stood prominent among the articles of ancient northern faith. Kirk, minister of Aberfoyle, thus formularises that belief:

"That also some are of so venomous a Constitution, by being radiated in Envy and Malice, that they pierce and kill (like a Cookatrice) whatever Creature they first set their Eyes on in the Morning; so was it with Walter Grahame, some Time living in the Paroch wherein now I am, who killed his own Cow after commending its Fatness, and shot a Hair with his Eyes, having praised its Swiftmess (such was the Infection of an Evil Eye); albeit this was unusual, yet he saw no Object but what was obvious to other men as well as to himself."

A certain woman, looking over the door of a cowhouse where another woman sat milking, shot the calf dead, and dried up and sickened the cow, all by the "venomous glance of her Evil Eye;" and the murders committed in this manner by witches and warlocks were almost as numerous as those performed by means of charms and elf-arrows. In 1616, a poor old woman, one Janet Cock, was indicted for "overlooking" Jeane Forrest's child; and in the same year, Janet Irving was brought to trial for having suffered Satan to teach her the use of that fatal power. It was proved and sworn to that her infernal master had told her, "if she bore ill-will to any body, to look at them with open eyes, and pray evil for them in his name, and she would get her heart's desire;" it was also proved that she had translated this before into deeds, and had actually caused the death of many by overlooking. She was burnt as a witch on that sapient count. But this was almost invariably one of the "items" in those disgraceful dittays for witchcraft to be found in the Justiciary Records. The evil eye was one of the prescriptive possessions of a witch, and never failed in proof. For remedies or preservatives, the most favourite were: "the foure-nooked claver;" a cross made of the elder-tree, and affixed to stables and cowhouses; branches of the rowan, or mountain-ash, which, adorned with heather and flowers, had been carried thrice round the fires of Beltein, or Bael's time (of which more hereafter), then hoisted on to the roof of the dwelling-house; or a portion of that consecrated branch, cut, peeled, and wound with a thread, then fastened to the lintel of the cowhouse; charms and spells of rude prose or ruder verse; horseshoes and foxes' heads (in Aubrey's time, there was a horseshoe on most houses at the west end of London); amulets worn round the neck, and prayers said fasting. These were the counter-agents to the evil eye most in vogue, and of course found wonderfully efficacious.

Another superstition of fatal results, not confined, however, to Scotland, was that of the murdered dead bleeding at the presence or the touch of the murderer. Andrew Smeaton was taken up in 1636 for the murder of a man found dead in Belnalow Moss. He was held innocent; not on any legal proof; but because, at the request of his master, the Laird of Abercairnie, he not only simply touched the corpse, as all the rest of the assembly had done, but "lifted him up, and embraced him in his arms, and willingly offered to remain a space in grave with him." As no blood followed on this contact, Andrew Smeaton was held guiltless of the murder; which doubtless he was, poor fellow, though his acquittal might have been based on wiser grounds. In 1644, four men were drowned by the upsetting of their boat in a calm. Marion Peebles, a "noted witch," was charged with having changed herself into a porpoise, and under this form of having wrecked these unfortunates. Proof conclusive was obtained when at her touch "one bled at the collar-bone, another in the hand and fingers; gushing out blood thereat to the great admiration of the beholders and revelation of the judgment of the Almighty." Another noted witch, Christiane Wilson, was at variance with her brother. One day, in 1661, he was found dead in his own house, naked, and with "a bloodless blow" on his face. Christiane was suspected of having murdered him; partly because of her careless carriage on hearing the news of his death, partly because of her refusing to see and touch the corpse, according to custom, and as the rest of the townspeople had done.

At last, after much confusion, the baillie and the ministers haled her to the dead man's house; and as she touched the corpse, she prayed that, "as the Lord made the sun to shine and give light into that house, so also He would give light in discovering that murder." As she spoke, says the record, the blood gushed out upon the dead man's body, and dyed her fingers lying on it. On this evidence she was arraigned. This was the same Christiane Wilson who, when she was being carried off to prison for a witch and a murderess, was suddenly lifted off the pillion and flung into the stream by a furious blast of wind, though the sky was cloudless, and no storm followed this satanic demonstration. This fall of poor Christiane from her horse was included in the ditty as one of the counts against her, and as proving her witchcraft. In 1688, Sir James Stansfield was found dead in a stream. He was interred somewhat hastily, but soon after was exhumed for a post-mortem examination. After the examination, his son Philip, who stood on one side, helped to lay the corpse back into the coffin. Perhaps he was nervous, surely he was awkward; be that as it may, the incisions on the side next to him were strained, and blood fell on the young man's hand. He was instantly arrested on a charge of parricide; and on his trial it was argued against him that this accident "was the disclosure of some occult crime by the will of Providence." He was executed February 15th, 1688. Johan Norkott died in 1628. Some time after her death, rumours of foul play crept about; and at the suit of her young child, her husband, mother, sister, and her sister's husband, one Okeman, were arrested on the charge of murder. The body was exhumed for the ordeal by touch.

"The body being taken up thirty days after that party's death, and lying on the grass, and the four defendants being present, were required each of them to touch the dead body. Okeman's wife fell upon her knees, and prayed to God to show a Token of her Innocency, or to some such purpose; her very words I have forgot. The appellees did touch the dead body, whereupon the brow of the dead, which before was of a livid and carrion colour, began to have a dew or gentle sweat arise on it, which increased by degrees, till the sweat ran down in drops on the face. The brow turned to a lively and fresh colour, and the deceased opened one of her eyes, and shut it again; and this opening the eye was done three several times. She likewise thrust out the ring and marriage-finger three times, and pulled it in again, and the finger dropped blood from it on the grass."

Sir Nicholas Hyde tried these poor wretches, and doubted the legal validity of this miraculous testimony against them. However, he was convinced of the fact by the minister of the parish; and the father and grandmother of the child were executed, professing their innocence to the last. Okeman was acquitted, and his wife was spared because about to become a mother. Again, Janet Rendall was convicted of having slain a certain man by sorcery, because when she came into the house where the corpse was laid out it bled, "as a sure token that she was the author of his death." There was not a shadow of proof against her but this; and her only possible mode of murder was by sorcery, seeing that she had not visited him in his sickness, nor had she held any communion with the family. She was executed on that charge and on that proof.

Distempers could be given, cured, and transferred, by means of witchcraft and spells. The touch and the look were both as powerful for blessing as for banning, though it mattered little to the "assisa" in which direction their power was used. The king's touch was especially miraculous; and this was the only instance in which that power was held to be from God, and not from Satan. But folks had not learnt then to regard royalty as ordinary humanity. Arise Evans, the celebrated seer, was sorely troubled with scrofula. He dreamt that the king's touch would cure him; so rushing up to Charles II. as he passed through St. James's, he rubbed his scrofulous nose against the royal fingers; "whereat the king was disturbed, but the patient was cured." Yawning, breathing, and licking, were all potent remedies, but all subordinate to the touch. Chris-

tiane Gow, by yawning and breathing over one William Mylne, he "being deidlie sick, and the winding-scheit laid at his head to be put on him, the said diseased persone maid him that he instantlie becam whole and weil." And it was a frequent practice to bewitch body-linen so as to cause or cure disease. The seventh son too, if born in wedlock, and with never a daughter intervening, had peculiar powers that way. Aubrey's friend, young Sam Scot, could cure almost any disease when quite a lad, but the power weakened in him as he grew older; and other instances are to be found, names, dates, and residences all duly set forth, as "guarantees of good faith," and as challenges to contradiction and inquiry. Saliva had also singularly sanative properties. If cows fell sick, and their milk dried up, where so good a remedy as that used fasting? "Nay, when three ears of barley, previously spit upon, were thrust into the mouth of one [cow] almost suffocated in the mire, the animal quickly recovered." For blindness it was an especial specific; but blindness was cured by more than one method. An incipient cataract was once healed by a little water found lodged in a certain hole in a certain marble tombstone, which the patient had dreamt would work the cure; and "May-dew was held a great dissolvent" for this malady. The king, of course, could heal blindness, either by his prayers or by his touch; and warlocks and witches could do the same. Patrick Lowrie, after having struck a woman stone-blind by his enchantments, restored her sight as he had withdrawn it. The same Patrick also cured a child by "taking a cloth from its face, which he hallowed and crossed with his hand; and returning in eight days to cover it again with the cloth, the child slept two days without awakening, when one of the eyes formerly blind was found to be restored." This was about half a century before Valentine Greatrakes began his career as the "Irish Stroker," and about a century and a half before Mesmer and his disciples set all Europe in a flame by practices founded on the same principles as those of the poor convicted wizard Patrick Lowrie. Certain wells and springs were of course efficacious in restoring both sight and general health, if resorted to on proper occasions and with due ceremonies. St. Fillan's Well, if bathed in, or its waters drunk, on the 1st of May and the 1st of August, and if previously thrice encircled, would heal all complaints whatever, but especially distempered eyes and insanity. The water of a well at Struthill also cured insanity. The fountains of the chapel of Craikquerrelane, on the hill of Lochgreven, would cure any disorder on earth, if used on St. Patrick's eve; and if sickly children were carried on the first Sunday in May to St. Anthony's Well, near Maybole, they need not be taken much care of afterwards: the well would do all. Immediate death or recovery followed a draught from a well at Chader, in the island of Lewes; and the Dow Loch, in Dumfries, not only healed all maladies, but bestowed the gift of prophecy as well. But south-running water, coupled with silence and a wet shirt, could do more than all. To the prophetic glory of the hydropathic school there are multiplied instances of witchcraft, proven by cures wrought by wet shirts steeped in south-running water. Other ceremonies were added, certainly; but though the blood of a red cock mixed into a certain bannock; though the dead silence to be preserved while carrying the healing water, the charmed circling of the well thrice and the going widershins round it once (*widershins* means, "contrary to the way of the sun"), the straw which was burnt at the four corners of the patient's bed; though all these ceremonies and adjuncts were doubtless of the greatest possible benefit, as likewise the lumps of salt and the fairy-stones cast into the pail or stoup,—still we are inclined to place the most trust in the south-running stream and the wet shirt *pur et simple*. But it was a dangerous remedy in those unwashing days. A jury of, it is to be presumed sane, Scottish men convicted a woman on the charge of "washing the inner nuke of her plaid and apron;" and it was made a capital offence to have bathed a sick man several times after sunset in the sea, by which unhallowed bathing he was

healed. In 1674, the kirk-session of St. Cuthbert's resolved, that "none goe to Leith on lambes-day, nor tak their horses to be washed that day in the sea." Von Preissnitz would have had bad innings, had he fallen into the hands of those worthy sessionists.

Salt and wheat together were excellent charms for animals. Some of each, if bound in a cloth to a cow's horn, would preserve her from disease; and salt and wheaten bread, put together into a cow's ears, would make her a good milker. Salt was laid on a corpse to drive away Satan, who has a mortal enmity to that condiment. It is thrown into the churn to exorcise any demons who may be in hiding there; and it is also mixed with the milk first taken from a cow after calving as an anti-satanic spell to preserve both mother and young.

Diseases could be transferred as well as given by sorcery or enchantment; transferred to the brute creation as easily as to the human. A cat, washed in the water which had just before washed a sick man, received the disease, whatever it might have been; and Katherine Grieve cured Elspeth Tail-yocour by casting her sickness on her calf. Helen Home's disorder was taken from her and laid on Janet Clark, her servant-maid, and then "it was cassin vpon a nee lamb;" and dogs or cats often intercepted the diseases sought to be thrown by sorcery upon their mistresses. Agnes Sampson, the grave matron-like "grace-wyffe of Keith," was convicted, amongst other similar crimes, of having first taken Robert Ker's sickness on herself, then of transferring it to Alexander Douglas; and a certain woman shook all her maladies into a hank of yarn, whereby James Liddel lost his life, he being the first to cross the threshold after the morbid yarn had been lain as a trap for the unwary incomer. Baptista Porta speaks of this power of transfer; but he asserts it as a natural fact, not as a miraculous or satanic agency. He says that a duck laid on a diseased part receives the disease and dies; and that a dog can be made to draw off the malady of his master and fix it on himself.

But all ancient sanative superstitions were not mere idle imaginings. Some had a dash of rationality in them. If Abracadabra written in a triangle would not be now held as a specific against ague, and of superior potency to quinine, —if the blood of a red cock might be advantageously exchanged for a course of steel, and the bite of a mad dog be dealt with by actual cautery better than by "rebus, rubus, epitepscum," written on a piece of paper to be swallowed by the dog or the man,—still the virtues of the "fox-tric" (fox-glove), of mercury, of the "oyle of worms," of a combination of black wool, olive-oil, and eggs for a cold; of a black hen's eggs and "aqua vitæ" for weakness,—were virtues real in fact, if somewhat exaggerated in degree, and modern science has not discarded them. We do not think we should put much faith in a draught from the horn of a living ox, repeated nine times, as a cure for our baby's whooping-cough; nor hope for marvels in the same malady by putting her, with certain ceremonies, nine several times in the hopper of a grinding-mill; nor should we believe in the special efficacy of grain against which she had been weighed three successive mornings—at least not so far as the weighing went; and we think we should prefer chloroform and extraction to writing three times,

"Mars, hur, abursa, aburse,
Jesu Christ, for Mary's sake,
Take away this toothache,"

and believing that when these three spells were burnt the toothache would go. Also we think that more certain remedies for children in hectic fever, and for patients in consumption, might be found than putting them thrice through a circular wreath of woodbine, cut during the increase of a March moon, and with the interval of twenty-four hours between each gymnastic; and that blue woollen thread, grey woollen thread, woollen thread drawn through holy oil, green yarn, &c., made into a circle, through which the sick person was passed, might advantageously give way to cod-liver oil,

rhubarb or magnesia, or brandy and opium, for the sundry diseases which these charms professed to cure. Still all was not moonshine; there was a substratum of truth even in the midst of these hygienic eccentricities. E. L.

THE LITTLE BLACK BOX.

A STORY OF THE SHAFTESBURY PLOT.

By G. W. THORNBURY, AUTHOR OF "ART AND NATURE."

CHAPTER III.

THE TWO AMBASSADORS.

"COLONEL CLAVERHOUSE," said his companion, bowing coldly, and keeping his stern unmoving eye fixed on Sir Robert, "is proud of meeting one who has bled for that good cause which seems now again endangered."

"Adzooks, gentlemen, both," said Sir Robert, flinging abroad both his hands at once, "no court *congés* with an old trooper, who can only beg you to come and take a poor Cavalier's refreshment at his broken-down house of Crow's Nest. Egad, I wish Mabel was here. Did you meet a lady and a groom as you skirted the Ravenhill woods?"

"We did, indeed," said Churchill, kissing his hand to an imaginary goddess; "beautiful as Diana, and queenly as Hippolyta. My friend here, who has a poetical vein, Sir Robert—"

"I a poetical vein," scowled Claverhouse, but did not speak.

"Says," said Churchill, quite undaunted, "that the flowers sprang up from the foot-prints of her horse, while the sunbeams seemed to run before her like heralds of her coming."

"Pretty court language, but thrown away on a poor squire's daughter. Your news from his Grace?"

Breaking abruptly into this conversation, Claverhouse, in a few soldier-like words, informed Sir Robert that his Grace the Duke of York being alarmed, not for his own sake, but for his Majesty's, at the rebellious procession of the Green Ribbon and other Protestant clubs, headed by Shaftesbury and the heads of the Whig party, has made an effort to muster all the Tory gentlemen of Oxfordshire who are of approved loyalty and stanch adherents to Church and king, and who are begged to attend the opening of the parliament with as many blue-coat men and tenants as they can muster, armed back and breast, and carrying pistols in their holsters. "The lands of Crow's Nest we find, by an old return of the troubles, furnishes sixty horse?"

"It did," said Sir Robert with a sigh. "But now, thanks to that Whig scoundrel I just pinked, my own servants are all I can mount."

"You're steel of the true temper after all, I see," said Claverhouse with a cold smile. "But to be frank with you, Sir Robert, I expected a far different response; for I heard you were but little better than a Trimmer, and even kept a Puritan chaplain."

"So I do," said Sir Robert with a wince; "it's more from charity than choice. But, egad, I keep him down, and make him drink loyal—at least—that is—he's a good sort of man."

"Try him with the oath of allegiance," said Claverhouse; "that is the best touchstone in these times; and then—"

"My friend Claverhouse," said Churchill laughing, "is exceedingly anxious to introduce several new systems of torture into England; and is determined, if the boots do not become popular with English judges, to join Kirk at Tangiers, and devote the rest of his life to exterminating the Moors."

"Churchill, you know the limits of my patience; so keep your wit for La belle Hamilton or the blushing Bagot. If my feeling of duty seems cruel or ascetic, that is between me and my God. I have not devoted my life to the study of dress-wigs, Martial's gloves, *ragouts*, or *chateaux*; on the fidelity of such gentlemen as Sir Robert Darcy, the *de jure* succession may depend."

CANAL AT ST. OMER. BY E. MORIN.

"Now don't be angry, Claverhouse," said Churchill. "I yield to no one in a sense of a soldier's duty; but we may surely sometimes stand at ease. You're always seeing great political consequences in Bab May's treading on the tail of the king's spaniel, or in Chaffincho's combing his flaxen wig."

"And you," said Claverhouse, "must have earthquakes or volcanoes, sieges or battles, or you think the world standing still."

But as during this short conversation, which was carried on in a low hot whisper, Sir Robert was attentively observing the two messengers of the court, we may as well briefly give the result of his experience.

Churchill, the younger of the two, may perhaps be better known to our readers under his more celebrated name of Marlborough. His features were bold, his eye keen, and his presence commanding; yet report deemed him at this time a mere voluptuary of the court, remarkable even then for parsimony, and tarnished by several acts of meanness. He was dressed in the height of fashion, and wore his cocked-hat pinned up with a large crimson rosette. His companion, a few years later immortalised as Dundee, was of a pale complexion; his features of great beauty and delicacy; his mouth small but firm; his face almost Grecian in the perfection of its oval. He wore no scented wig like his companion, but his own dark brown hair, that fell flowing to his shoulders; a short musketoon hung at his saddle-bow, and his saddle was high-peaked, and of the military fashion. His eyes, the worst part of his face, were cold and melancholy, and his mouth sad and sarcastic. A keener observer than Sir Robert might have shuddered to see a man who, in the stern asceticism of his ambition, would go through the world pitiless and cruel, though he had to wade in blood up to the lips.

"Beautiful excrescence of earth, intended by nature to pay debts!" said Churchill, looking up at the trees of the avenue through which they were now riding.

"Ah, ah, very well, sir, very well!" said Sir Robert, giving him a tremendous thump on the back, that set him coughing, and drove the powder in a cloud out of his wig.

"Killigrow is witty," said Claverhouse with a sneer, "though he does play the buffoon; but yet the buffoon is as good as the fop."

"You're too bitter," said Churchill in a whisper; "but, egad, that old gentleman's clap on the back was my best punishment for stealing the joke."

"An excellent good spot for defence, if the Whigs ever rise," said Claverhouse, his eye kindling as he rose in his stirrups, and pointed to the old hall in the distance between the trees. "A double ravelin there, with a traverse or high breast-work;—or a redoubt would stand well on that knoll where the three beech-trees are, though the pass would be shallow."

"A true young soldier," said Sir Robert, eyeing him from top to toe with an eye of admiration. "Crow's Nest had the honour, sir, of being for six months an outpost of the Oxford garrison; and in that time we repulsed no less than five attacks of Haselrig's men with only forty Babecaters and ten musketeers of Moyle's brigade. Once they fired the barn with a grenade, and another time put a petard to the kitchen-door and blew it in: but we soon rallied; and played upon them from the upper windows with pistols, and with culverins from the top of the clock-tower roof, though Moldrum had sworn to bring me into London alive or dead. But it's always the same,—one Cavalier to three Roundheads. 'He who fears death lives not,' as Hudibras says:

'Their words

Were sharp and trenchant, not their swords.'

So when they sent in the trumpet, they found me sitting on a powder-cask in the hall, and holding a black flag that we had carried off in a sortie; a broken drum near me full of white cockades for night-attacks, and a smoking musket leaning against my barrel. 'Base slubberdegallion,' said I,

'go back to thy masters, and tell them that we'll stew all our buff coats for soup before we surrender!' And egad, it was all a trick; for that night they broke up, and this house you see here was never taken after all."

"We shall never hear the last of this," whispered Churchill, who had been for some time betraying marks of uncontrollable *ennui*, fingering guitar-tunes on his scabbard, humming French airs, and otherwise diverting himself.

"A brave man's story can only be dull to the thoughtless," said Claverhouse between his teeth, as they rode into the courtyard.

"No apologies, gentlemen; no apologies. I see you whispering together. The chine of beef's ready, and the claret is longing to see the daylight. An old soldier cannot allow two young troopers to boot and saddle without spilling some sack or a little burnt wine. 'No pottage is good without bacon,' the proverb says; and I say, a fig for a meal without wine. And here's my daughter, come to bless God her father's got off scot-free; and she will add her wishes to mine to detain you; unless times are altered, young soldiers do not often refuse requests from such mouths."

Of the gallant compliments paid to Mabel; of her modest pleasure at the homage of the gay Churchill and the cold Claverhouse, heightened by her joy at her father's escape, which she had long ago known, for she left Roger to watch the result; and of the old knight's campaigning stories,—we will say nothing. Suffice it, that after a hasty collation, the two gentlemen mounted their horses, with the understanding that Sir Robert and his four men would be ready, armed, at the park-gate at ten o'clock of the morrow, prepared to fall into the king's train as he passed on his way to Oxford.

"Gallant gentlemen both," said Sir Robert, as they rode off. "That proud lad is the riper man; yet the gayer fellow is no worse soldier. But it will be a busy evening with me, girl; for I must look up my best back-and-breast piece, and the Danascene gorget I wore at Edgchill; and Roger must brush up the crimson housings with the gold-lace fringe; for I must turn out as a Tory gentleman and one of an old family should do, to guard his king from a pack of noisy rebels, who would set up another Commonwealth, if Shaftesbury were but another Cromwell."

With these words the old knight hurried off to execute a series of multifarious duties; namely, to see his dogs fed, his hawks ditto, his armour cleaned, his pistols furbished, and his saddle-cloth brushed; not forgetting, however, amid all his occupations to inquire for Master Wilson, who had not attended as usual to say grace when dinner was served up in the hall; luckily, perhaps, for him, as the toasts were chiefly "Down with Tony," and "A strong rope instead of a green ribbon."

Mabel's first impulse on returning home was to inquire for her tutor. The old housekeeper, Mrs. Rachel, supposed he was poring over those everlasting books. Pretty Betty tossed up her head, and said he was moping as usual up in his room in the clock-tower. Roger was sent to call him. No one answered. Mabel grew anxious, and tripped up in search of the indefatigable student. *Tremor cordis* was upon her; she did not know why. She felt a strange vague apprehension, the more terrible from its causelessness. A sense of approaching evil hung over her. She stood still a moment at the foot of the worn brick-steps leading up to the often-visited room; she could hear many sounds,—the swallows chattering under the eaves, the great iron pulsation of the clock above, the distant noises in the court, her father's voice whistling and cheering his hawks, and even the muffled throbbing of her own heart. The sunset-light fell red and soft upon the whitewashed wall, still dented here and there by the marks of Puritan bullets. She listened; there was no sound,—not even a leaf of a book turning, a pen scratching, or a foot shuffling on the matted floor. Should she call her father?—there might have been murder.

Half-ashamed of her fears, and remembering that she was a soldier's daughter, Mabel ran up-stairs. The door was ajar; should she push it open? It creaked bodingly; the wind moaned sadly and desolately through the key-hole. She entered; the room was empty. The light cane-backed chair stood at the same place, with the crutch-headed cane leaning against it; the old quarto Horace still lay open at the ode they had read that morning; some dried wild-flowers lay on a shelf; rows of folios basked on the floor, leaning against each other for support, some marked for reference. Mabel could not help looking behind the arras, as it waved, apparently without wind, to see if any one were concealed behind its screen. She opened a small bureau; it was empty. Mabel was about to leave the room, to inform her father of Mr. Wilson's strange disappearance, when a volume of Calvin that lay on the table arrested her attention, for a strip of paper projected from between the covers. She drew it out. It contained only these words, evidently the last farewell of the fugitive:

"MY DEAR CHILD AND BELOVED PUPIL,—Bernardus Viscontinus doth say, that Hypericon, or St. John's-wort, gathered on Friday in the hour of Jupiter, when it comes to its effectual operation, that is to say, about the full moon in July, suspended or borne about, or hung at the neck, nightly helps digestion, cheers the heart, nourishes the brain, and drives off all fantastical spirits. Farewell on earth."

When Sir Robert heard of the flight, he ordered Roger to saddle Black Jack, and make inquiries for twenty miles round. Roger insisted on searching the ponds because, he said, "Master Wilson was melancholious." The housekeeper always thought it would come to that; for he had lately refused her succory pottage, and taken to extreme fastings. Betty had always said he was a witch, and she was sure of it; for she had seen, three days running, a black mouse run round his room while she was sweeping, and he bade her not harm the little creature. And hadn't she seen at Daventry the Rev. Mr. — drive a devil out of a young man with the falling sickness, who afterwards confessed he had five familiars in the shape of dun chickens?

Sir Robert was up next morning before cock-crow, when the busy rooks were only just awaking one by one, and croaking drowsily here and there high up in the mist of a summer-morning. The hawks whistled from their perches when they heard his voice, shook their wings and fluttered; the dogs rattled in and out of their kennels, and the horses neighed greetingly from the stables; the red-haired stable-boy had to be squeezed into a tight buff jacket, made for Sir Robert when he was at Westminster School; the gardener had to hide his spindle-shanks in enormous jack-boots, with broad flaps of stirrup-leather.

It wanted about an hour of the time of meeting; and terrible was the amount of work still to be done. Roger could only find two odd spurs; the gardener's stirrup-leather broke; and Sir Robert had lost one of his Edgchill pistols. At this crisis, as Mabel was tying on her father's crimson scarf, as well as his fuming, singing, and perpetual motion would allow her, a horn was heard sounding three times at the extreme end of the avenue; gradually the sound came nearer; and the next moment a gay carriage-and-six, with outriders, and running footmen carrying the usual sticks of office, drove rapidly up to the gate.

"It's his majesty, by St. Peter!" said Sir Robert, observing the royal arms on the panels, and hastening to the hall-door to receive his illustrious visitor. Can that be the king that steps out, shakes his wig into order, looks at himself in a small pocket-glass, then bows three times till his wig touches the door-steps; while the servants laugh and chatter, and the coachman bends from his box to hear what he says? The new visitor, king or no king, takes no more notice of Sir Robert, but anxiously superintends the unpacking of several small valises and chests, crying out various directions in a shrill important voice:

"Antoine, ser, prenez garde, canaille! Zat sauce zall be

ruined if zu zall distoerb heem. Jacques, fripon, break zat flagon, and it vill bring you to the échefaud—vat you call gibbet."

"Zooks, what's all this? Do you take my house for an inn?" said Sir Robert.

"Sare," said the Frenchman, putting on a conical cap of white linen, shrugging his shoulders, and thrusting down his hands in his pockets, "I am Monsieur Ortolan, cuisinier français, zat is, French cook to his majesté; and am come to prepare a small collation for his majesté, who will be here tout de suite. (Vieux bête Anglais!)"

"There, there, he says something more. Run for Mabel, Roger; it's something about the king and a relation."

"Don't be flustered, your worship," said one of the running footmen, leaning complacently on his stick, and whispering to Sir Robert with a side-glance at Monsieur Ortolan, who was unpacking a case of silver stewpans, polished like mirrors, and of a dozen different sizes; "it's only the way of them furriners. His majesty is going to luncheon here on his road to Oxford."

The hall was now strewn with chafing-dishes, bags of charcoal, cases of essences, stewpans, trussed fowls, and various long-necked bottles of propitious appearance. In five minutes Monsieur Ortolan was attired in a white dress, with his case of spoons and knives by his side, absorbed in the manufacture of various fricassees of delicious odour, timing every thing with a stop-watch, taking snuff with an air of great nonchalance, and occasionally looking at the walls and ceiling with an insolent shrug of affected pity.

"Lor' a mussy on his messes!" said the cook, indignant at being expelled from her own dominions; "if he only knew how to cook a good honest joint!"

"If I can cook ze cotelette, if I can cook ze soupe Néapolitaine,—mon Dieu, if I could make ze dying man eat! Antoine, apportez-moi ze poivre. Le vieux soldat, qu'il est en colère! Pah! ah, ah, coquin, ah! I will teach him to respect his majesté's officer de cuisine."

"What does the wizened old fellow say, Mabel?" said Sir Robert, looking at him with mingled curiosity and wonder. "I see his jaw going like an ape's with the ague."

"Plait-il, mademoiselle, que vous êtes charmante. Qu'est-ce qu'il dit, ce vieux monsieur-là? Il est farouche comme tous les diables, n'est-ce pas?"

Acting as prudent interpreter between her father and Monsieur Ortolan, Mabel soon discovered that he had been sent forward, according to the king's usual custom when his visits were sudden and unexpected, to save Sir Robert any annoyance by preparing a hot luncheon, in order that he might rest before his public entrance into Oxford, and await a strong escort of Life Guards, under Colonel Claverhouse, who was to join him at Crow's Nest; the attitude of the mob who swarmed the road being unusually threatening and alarming.

Mabel ran to put on her silver-lace gown, and begged her father to resume his black-velvet coat and his—

"No, no, girl," said he; "proud as I am of receiving his majesty this day under my roof, I will receive him as a soldier, and not as a courtier; egad, if I don't feel as gay as a hawk that's just whistled off the fist." And he began, much to Monsieur Ortolan's amusement, to shout, "The king shall enjoy his own again!"

"Only look at them messes, Sir Robert," whispered Roger; "they aint fit for a dog to eat."

"They turns my stomach," said the housekeeper, who had been stalking about with upturned nose and folded arms.

"An Englishman would be ashamed of himself," said Roger, "for spoiling good beef in that heathenish—I call it heathenish—way. Lord, Sir Robert, do you remember how we cooked that horse-steak on a ramrod after Edgehill; and how it was done to a turn?"

There is no knowing what series of campaigning stories this might have led to, had not at that moment a second horn been heard, and the next instant two coaches, at-

tended by a few outriders, dashed up the avenue, and drew up at the door.

The door of the heavy gilded coach flew open, and with a hearty laugh the merry monarch stepped forth, depositing a long-eared spaniel upon the ground, gave it an affectionate kick with his royal foot, and took off his hat, as Sir Robert sank upon one knee, and welcomed him as "an old Cavalier soldier to his poor house of Crow's Nest." Who but knows the swarthy deep-lined face, full lip and mouth, heavy eyelids, dark upturned moustache, and black periwig of Charles, the worthless good-humoured *bon vivant*? He was dressed in deep-blue satin, looped back at the cuffs to show the full ruffles of his wrist. Round his neck was a cravat with long ends of the richest Flanders lace. He wore the blue ribbon of the Garter; the George, set with diamonds, hung under his left arm. His stockings were of the finest pearl-coloured silk, and his shoe-buckles glittered with crystals. Behind him came Arlington, with the black patch saddling his nose, that Killigrew so often laughed at, produced originally by a pistol-wound received during the civil wars; his uncurled light wig falling on his shoulders, remarkable for a certain stiffness of manner, that made him the butt of the gayer part of the court. Then arm-in-arm walked the Earl of Rochester and Sidney Godolphin; the former not the licentious wit, but the son of the great Lord Clarendon; his handsome piquant features contrasting singularly with Godolphin's double-chin, high broad forehead, and massive features, always bland and calm, and attuned to that courtly smile that had raised its master from a page to the Treasury bench. Cautious and calm, he offended no party; clear-headed and incorruptible, he was equally useful to all. "Sidney Godolphin," said Charles, "is never in the way nor out of the way." Prudent and cool, he detested factious men, and was a Conservative from necessity of temperament; grave and reserved, he might have passed for a bishop, had it not been known that all his spare moments were spent in horse-racing and cock-fighting.

His friend Hyde, quick and penetrating, a fervent Tory and experienced statesman of the Cavalier school, might have made an excellent prime minister but for his arrogance and violence of temper. His consistency, however, in such a corrupt age, made Hyde seem respectable.

Last of all, his head bent as if absorbed in meditation, came a mind that far transcended either that of the king or his two companions. This was Sunderland, the secretary of state, the wildest diplomatist of that abandoned age, when statesmen were without principle and women without virtue,—cold-hearted, keen-eyed, restless, insatiable, sold to France, a lukewarm republican in theory, a lukewarm royalist in action, a microscopic observer of character and life, but with a less comprehensive glance than Shaftesbury. He was a distinguished writer himself, cunning, supple, shameless, free from all prejudices, and destitute of all principle, courted and feared by all parties, in the royal closet potent, at the council-board taciturn, in the House of Lords a mute and sneering listener to the brilliant and philosophic Halifax and the adroit and ready Shaftesbury. Fascinating, yet insincere, he was the fair-spoken Belial of his century's politics; and had an utter contempt for such visionaries as Algernon Sidney, whose purity seemed to him Quixotic.

But leaving for a moment these statesmen, let us describe the hall into which Sir Robert ushered his guests, and on whose ponderous table, thanks to Monsieur Ortolan, a dainty luncheon was already smoking.

It was a lofty room, the ceiling covered with square panelling, with coats-of-arms painted at the intersections. The floor was paved, but covered here and there with mats, and where the king sat in Sir Robert's state chair, with a small Turkey carpet. The walls were panelled with oak, and studded with stags' horns, foxes' brushes, and a few pikes and old matchlocks. At one end stood a perch, on which rested four hawks, two long and two short winged, adapted for the striking either heron or partridge. Over the vast fireplace hung a tapestry of fox-skins. In one corner

of the room, on a heap of straw, was a litter of puppies; in another a bunch of hunting-poles. From the chimney-piece dangled a string of hawk's bells and a long twisted whip; while on a shelf above was an old felt-hat full of pheasant's eggs, and on the window-ledge a pack of old cards and a pipe, besides a book of Chronicles and a work on farriery. A low door at one end of the hall opened into the chapel, a spot now seldom used; the pulpit of which served Sir Robert as a convenient cupboard in which to keep a cold chine of beef and a pastry for a "snack" between whiles.

THAMES ROWING.

A CLEAR summer morning, deep in July, was the first occasion of my going on the water this year. The sky was intensely blue, and dappled with little cloudlets that floated over its firmamental depths white and lustrous as the swans that are scattered about the blue-reflecting bosom of the river.

Getting into the beloved boat again, it is noticeable that she appears to have grown crankier since the winter;—such a thing is use,—whereas seven months ago it was the simplest thing in the world to enter this feather of a boat; yet now, that interval passed without practice, it is with some nervousness that I part from the landing-place in a vessel whose entire weight is under fifty pounds, while her length exceeds twenty feet. The boat, in fact, is of the class designated by a distinguished critic on art, "a floating chisel," with the further assertion that it possessed no beauty whatever. To me this preremptory decision is absurd. I see immense beauty in a wager-boat; firstly, because it perfectly fulfils its function of extraordinary swiftness (and the perfection of fitness to function I hold to be the prime essential of beauty); secondly, when examined out of the water, the eye will immediately recognise an elegance of form about such a boat, unless, indeed, we are bound to receive only curves which are portions of circles of small diameter as beautiful, excluding the forms of many leaves and many fish;—from the swiftness of which latter have been taken the moulding lines of the out-rigger, or wager-boat. Also, such a boat, when in the water, is beautiful to me because there is a sort of analogy and keeping, so to speak, between its horizontal parallelism of line and the similar character that distinguishes the place of its service—the river; thus in the same manner a bluff-bowed boat is beautiful at sea, because partaking of the characteristic forms of the waves, and of those rounded shapes which water-worn rocks assume as the result of and best protection against attrition by the waves. To say that the apparent insecurity of such boats detracts from their beauty, is simply an augury of a want of knowledge in the observer; as, to those who know how to manage them, these vessels are by no means insecure. The same thing might be said of the form of man himself, who appears top-heavy, until we learn his power of adjusting the centre of gravity; the swan, a universal type of beauty, seems in danger of going down bow-foremost, without our knowledge that the weight and power of counter-balance which his feet possess beneath the water is sufficient to rectify this.

Thus thinking, I dispute that fiat on the beauty of wager-boats; while the feeling which results from their use is extraordinary,—for the royal effortless power exerted, and the speed which a skilful rower attains in them, surpassing as it does any other rapidity which man can gain by his own muscular power, is a perfectly human victory. Having been up in a balloon, and travelled on a locomotive at the rate of sixty miles an hour (the swiftest method of progression), we boldly assert neither of them to be comparable for delight with the result of a man's own efforts—rowing in a "floating chisel." Floating chisel, indeed! We should like to put the critic into training, and make him row on the Thames for half an hour, getting over six miles of water, as he might do in a floating chisel. We know perfectly well

that speed is a small result, maybe a poor thing, when gained; but that is a question which does not affect the beauty of the instrument for its accomplishment; and it might have occurred to the critic that some people will prefer to go fast, although he desiderates slowness.

When last on the water its whole character was gloomy and monotonous decay; the full stream that flowed along like oil, the heavy gray sky, the trees, whose leaves fell from them in showers,—all combined to give an air of sad and breathless desolation, very depressing to the mind, and fully in keeping with the utter loneliness of the water. Now every thing is bright and sheeny; the wavelets ripple crisply in the morning air, like the clear smile of a young girl; and the trees, which were fast growing stark and bare, seem fairly overlaid and heavy with leafage; they rustle drowsily under the hot noon, seeming to take a *siesta*, and shift themselves uneasily in the heat. The thinnest dress, and the lightest pair of sculls, suit best this burning day. Despite the intensity of the heat, my progress must be swift, having to overtake some comrades previously started, and in their company witness one of those great festivals of the river—a rowing-match. The light boat rushes through the water easy, steady, and swift; cuts a path that ever closes in a hissing track behind from under the polished and keel-less bottom. The rigid iron outriggers groan with the stress of each stroke, and the fairy craft leaps at every effort like a flying deer. Onwards, onwards, leap upon leap, for mile after mile is the speed kept up, until I have recovered so much time that it is advisable to rest and let the tide (which is at the spring) fill the river. Here is a shady place under some trees, a usual cooling place of mine; into it, and float stilly upwards as the water flows. This place feels chilly after the heat and exertion of rowing, and has within it a murmuring and hissing sound that is like the clustering of myriads of bees, yet not an insect is to be seen; indeed, the noise is too much of a hiss and simmer for the drony sound of wings. There is no wind to cause it; it is too universal to be from any thing concealed in the grass, or I might fancy it came from some of the beetle tribe. Neither in the air, nor in the trees, nor amongst the grass upon the bank, and yet encircling me in all directions, the sound can but come from the last place one would look for it—the water; and so it is indeed; for all around are bursting incommensurable millions of bubbles; that rise from the clay-bed of the river, rustle to the surface in a tiny tract of light, and explode each its little life into the common air. I can see them clustering like strings of pearls around the chinks in the earth below.

The tide, being of the spring, rises high against the bank, so that it is easy to look upon the meadows. There, nestling among the flooded grass, is the little Cyclops, the Darling! the Daisy! Hail, Margarita! Salvi! Salvi! I take off my cap to you, Queen of the Meadows; that last stroke of the scull sent the ripples thronging about your stem, and you nod to me the most affable salutations. I may err in this, however, and the action be defiant, and yourself

"A silver shield with boss of gold,
That spreads itself some fairy bold
In fight to cover."

Thus Wordsworth names you; but let the reader recall the poem and see which of that shower of similes is the truest; or take the flower, and make a thousand more. Let him cast himself on a bank of them dog-like, roll over in them, scatter them above him in handfuls, or bite them if he will.

I must pull onwards; so, Queenling, *au revoir!* What, not a kiss of the hand to me, your first visitor, your only lover this day! Who else shall heed you when the tide falls? On the next flood only the moon shall look upon you; will she "take off her veil of light" as I my cap? Will you wait for the lover of another day? I trow well that to-morrow those little triplets of crimson shall be shuddering together like the fingers of a frozen hand. Ah, little one, I knew you for a prude despite your rose-tipped fingers. Adieu.

The moon, that shall be the only greeter of that jilt of a daisy, looks always sweetly on the river; the very thought of it recalls a night I spent some miles above here, which I will attempt to describe. It was not a full orb such as shall this night smile that flirt of a flower out of countenance, but a dying luminary of the third quarter. A silvery lustre hung about the horizon's edge, which broadened until the brief-reigning planet arose,—paced her short arc,—made the earth like her own face,—spaces of blackness and bright light;—soon declined again, and sank beneath the poplar-tops; faded behind the willows on the stream; glinted upon their motionless branches for a while; then paled away to naught but a faint radiance that sank,—sank, and vanished from the sky, leaving the night, the river, and the land to the stars' silent ministrations. And well were they performed. Then I lingered through the dark; the stream lapsing languidly upon the boat's side, and the long sighs of wind seeming to be night's hushing breath bidding me not wake the echoes that the solemn darkness stilled. I woke them not; but drifted, drifted, by village and hamlet and solitary house, silent and sleeping; now among a fleet of swans that shimmered in the darkness, now into the mysterious depths of blackest tree-shadows. What nights were those! Saw I not giant Orion hang his great shield on high, mystic Aldebaran lustrously shine, and Ophiucus glitter like a taper? Thus I watched,

"—— till the bear had wheel'd
Through a great arc his seven slow suns."

The Thames is, of course, not without strange specimens of humanity peculiar to itself; one has just passed me, pulling steadily in a funny; a man known as the "Flying Dutchman," a sobriquet well deserved, not for the swiftness of his rowing, but from the fact that, at whatever hour one is on the water,—morning, evening, or noon,—sure as the tide runs, you meet this man; a stoutish, decent, white-haired individual, who steadily sculls along with unhasting even stroke. I can certify that at all hours, and in all places, and, what is more strange, on all occasions of being on the water, I have seen this person. Going down the river to Greenhithe, steering a six-oared boat in the mazes of the Pool, I was startled by his appearance, pulling steadily round the bows of an ocean-going steamer. Far above the locks, when under the elms at Wargrave, I have seen him sweep easily along. Morning, noon, and evening, did I say? I aver that once, just before dawn, having made fast to a tree on the north side of Twickenham Ait, I was knocking off the neck of a bottle of milk-punch, when hearing sounds of sculls in the misty darkness, I cried, "Look ahead!" to which a mild monotonous voice replied, "All right." And then I saw *him* sweep by, pulling steadily stroke over stroke. Indeed, I was amazed; the sight cost me the bottle of punch, which slipping, plunged into twenty feet water, and became jetsom for the naiads; may it warm their chilly British blood! I am the only man who has heard him speak, that is one comfort. If he lives any where out of the boat, it is in a lone house up a rushy creek at Wandsworth, at the mouth of which he has been seen to hover. Such is the Flying Dutchman of the Thames. Rowing-men say he is condemned to scull eternally for having neglected to save a drowning man. If you ask a boat-master, he avers in an undertone that it is a judgment upon the sculler for having refused to pay for the boat in which he rows.

Swallows, here again! from what unknown valley under shadow of Atlas Mount are you returned? You that skim the placid river here so closely that I hear each bill snap upon its prey,—may have, nay, must have, seen the lion come to drink in tarns of Libyan hills; and near as you are to me, have as closely fitted by some canoe-man drifting (as I do) on a river flowing from southern hill-slopes which look on to the Unknown Land. Perhaps in the palm-groves of Lake Tschad your twitter has been heard; or you have overswept its cane-brakes with glancing wing, and could tell if from the same hill flow both Nile and Niger.

Some time must pass before I meet my comrades and reach the racing-ground; let us beguile it with recollections of the aspect of the water at a very different time from the present, when it is so still that one might fancy oneself on a tideless lake, where the trees stand breathless and gasping, and there is a sort of hum about the earth simmering in heat, which the drowsy air drinks in; the birds themselves sing sleepily, and so calm is all about that I hear them on both banks. An idle dog looks at me from the shore, too hot and lazy even to bark. Not a drop of rain has fallen for weeks, until the very thought and hope of such is refreshing. Not a cloud is now above me; all the islands and swan-like clusters have vanished under the overpowering heat.

Then there were odd piles of fantastic cloud about, covering the clear spring-sky; and I noticed more especially one, lying along the horizon like a recumbent angel, resting upon an elbow, and seeming as if set to watch this plain, with lance planted slopewise before him. He had been motionless for an hour, till I almost fancied the faint heavens of air that shook the poplar-tops must have been his sleepy suspirations. But not so; angels never sleep. Just then I saw him raise his hand, and toss it backward for a signal. Instantly, far away on the other horizon, banners arose, appearing, uprising, legion after legion, like a host; they stream athwart the sky, followed by strange-shaped clouds (dreadful aerial engines of war, maybe); ere this array was half-way over the sentinel stirred, and seemed to put forth, first another arm, then wing after wing, when he sped onwards as leader of the advancing throng called to battle by some companion-watcher, whose southern post was the last of a chain extending from a great battlespace over the Atlantic plain. Ho! the need is urgent; for see, the war-engines are left behind, and every cohort levels itself more and more to fly the swifter, while the motion of their innumerable wings makes the poplars swerve backwards to the very root,—soughing. From the north-east, more and more, army upon army, and that level cloud with hillocky whitenesses upon it, which erst I took for an encampment, proves itself so indeed; for, see,—all the tents are struck, and the whole body marches hitherwards, black and portentous.

How strange that soundless march did seem,—millions on millions,—and all I hear is the loud wrestling of the trees and the lapping of the water, which the wind of the army's multitudinous motion dashes smartly against my boat! Silent, I said;—but what means that mutter-like shuddering sound? why do they from the encampment linger overhead, and draw together into a mass? O, I see! they were the reserve, and my watcher their general; for here he comes again in the higher regions of the air (indeed he did sleep, angel as he was, and should have been begone before), sadly smirched, not a plume remaining, rose-tinted as they were; nor alone either, for hither drives the whole South-West, big with rain too,—that spot went through my dress. On with my waterproofs, and let the boat drift while I see out the fight. Nor without partisanship; for it is the North and East against South and West—Winter against Summer—doing battle under the pale sky of Spring. There they come; my level flyers driven backwards, heap upon heap. The poplars scarce move now, but creak with an uneasy swing. More muttering; and rain-drops, like flights of javelins, hiss into the river. The sun is shut out awhile, and the battle goes on; wreaths of whitish cloud scud across low down,—forlorn hopes, probably,—all in tumultuous gray confusion. That rift to the north shows that the main body is broken. Close up!—Close up! make the darkness deeper for a last struggle. Too late; the faithless East is flying. Rolling mass upon mass, the black South-West has it; and far away they go, West and South and North and East, into the country of the invader. Opened out the bright sky again, bluer than before; the poplars toss again, and the aspens upon the bank turn up their white leaves to the sunlight, hisping and fluttering a joyous

echo to the river's plash. Just where the encampment stood, some of the South are erecting a triumphal arch; and there, where the forlorn angel lay, a city is rapidly building, which the setting sun shall illumine with crimson, vermillion, and burning gold, to honour the bridal of Spring.

If Sardanapalus built Anchialus and Tarsus in one day,—or boasted that he did,—what shall be said for the aerial architect yonder, whose materials gather to him out of the sky itself, who is heaping palaces a mile high, and laying their foundations forty miles from end to end; nay, for mere whim, and without a waft of air, he has brought for a background a whole range of mountains out of immensity, upon whose riverless sides the sun pours a flood of opal-coloured light, more lovely than the most gorgeous fantasies of Imperial Dreamland itself. How long has he been doing this? Why there!—the lower boughs of that green-black arbutus are still dropping jewels which had not parted from its summit when he commenced to labour, and now,—when the last globules glitter upon the grass,—Palaces and mountainous Pyramids and Arcades,—columned like Indian rock-temples,—stand as steadily as icebergs upon a lake, and are based upon as stable a foundation as either of the Assyrian's Mesopotamian cities.

In these remembrances of spring I have almost forgotten that this is burning summer, but must not forget my appointment, and the object of the excursion. A mile or so onwards is the racing water, and there are the men I have to meet. The race is just about to start. Now, best of readers, I am not going to describe this match, for the correspondents of the sporting papers did that with an enthusiasm unattainable by me; but shall rather put you into my own position, when seated in a racing eight-oared boat, on another occasion, and prepared to row for a prize.

I had been in training for some time, and attained to the utmost tension of muscular strength and vital power, feeling like a young Adam, every nerve being braced to the height of clear sense, like a musical instrument brought to concert pitch. The rowers and the boats were ready at the starting-place. We sat steadily, each man with his oar backed at full stretch, ready to dip and pull at sound of the signal gun: I held my breath anxiously, and the light wind shook a loose neck-ribbon against my cheek. Bang! went the gun, and with an instantaneous consent the eight oars touched the water, the lengthy boat leapt into swift motion in a second, and, amidst a shout from the spectators, the competitors flew onwards. Although the river-banks were lined with men manifesting their interest by yells and shrieks, yet that cry at starting was all I heard; excepting when the regular beat of the oars, and their sharp roll in the rowlocks, struck my ears, or a call from the coxswain of "Steady!" was audible above the sort of fierce devouring rush which the sharp-nosed boat made in cutting the water. Naught was the effect which my strength appeared to produce upon the boat while merged with that of the other seven rowers. The gesticulating crowd seemed to waver as we flew by; and it was not until after rowing some minutes that I found we had passed all the boats but one, and of this were but half a length astern. I could see the efforts of the crew as they strove to keep the lead. Gradually we slipped past; first being abreast of the midmost rower; then of No. 3, who sat immediately ahead of him; then No. 2, and at last a mighty stroke brought the boats exactly level with each other. Perceiving this, our opponent "put out," partly recovering the advantage; then we also strove, regaining it. We passed them and stole ahead; they fell back, and our boat fairly tore through the water,—it seemed like riding on an arrow; the cleft stream parted in a bright fan on either bow, while the wind of our own progress was like a fresh breeze. Regular, steady, swift, and strong, onward we went, thinking the prize our own. But our antagonist unflinchingly toiled behind, and I could perceive that his skilful coxswain was gradually edging our boat out of the force of the tide; on rounding an angle of the bank, this told against us, and he, cutting sharply across the chord of the arc we had made, shot more

than a length ahead; an advantage we could not regain, so close to the winning-post as we were. They won, and fairly won, the prize. Such is a boat-race; but I could never tell you of the fierce effort, the exhilaration, and the feeling of strength and might, which one feels during its occurrence.

The great match I had come to see was over, with the usual amount of noise, rejoicing, and disappointment; and I quitted my companions to row higher up alone, enjoying the glorious day now fast sinking into stilly afternoon. I went onwards some miles in silence, rested for refreshment till the tide turned, and began easily to scull homewards; when one of those little showers which break even the fairest day compelled me to rest under the branches of an elm hanging upon the water. The rain over, a smart breeze sprang up, and compelled me to row close to the bank, for the fretful river chafed pettishly, leaping into the boat. But what drenched and wretched figure is this, rowing as it were out of a willow whose pendent branches sweep the stream? By Leander, my excellent friend T!—! Says he, "A smart shower that, Fritz; where were you?" "*In nubibus*," I reply, and row on; with a remark not complimentary to my veracity, he dashes after.

Now this man, a good creature otherwise, is one of those dreadful bores, a logician, who calls himself a transcendentalist and a political economist of the rankiest growth; who is so argumentative that I do believe he would reason the Widow out of the propriety of giving her Mite. A mortal I dread, so fly from with all the speed of my swift boat. He dashes after; for awhile I keep ahead, the long powerful sculls flashing momentarily over the water like the pulsing tips of a hovering hawk's great wings. But he is the stronger and heavier, and before my more trained power of endurance can tire him out will catch me for his prey. A little farther onwards is an inlet under trees, into which I can dash, lie shadowed, and let him overtake me. Crash among the feathering boughs, wet from the shower, grind upon the shingle I go; then pause breathless and still. Heedless and hasty, he plunges by, driving the nose of his boat under water, passes, and I am free this day from his pitying smile at my ignorant want of logic and irrational feeling. Victoria, Victoria! the race is not with the swift!

I disentangle myself from the boughs, glorying in escape. But, woe is me! "Don't halloo till you're out of the wood," says the proverb. Back he comes, suspecting the trick, and I am caught. Pitying reader, I can tell you no more; he puts me,—*z*, the unknown quantity,—into his mill, till I come to a doubtless just conviction of having been born a fool; he sticks to me all the way to Chelsea again, and sees my boat hauled up at Coates's, arguing the while; then, with a conceited smile, says, "Good day." Good day, indeed! sheers my week's holiday in half, and talks of good day. All I get out of him is the bitter conviction that "I must learn logic some of these days." F. G. S.

POLYGLOT READINGS IN PROVERBS.

A ROLLING STONE GATHERS NO MOSS.—This is an exact rendering of an ancient Greek adage, which is repeated with little variation in most modern languages. The Italians say also, "*A tree often transplanted is never loaded with fruit*,"—*Albero spesso trapiantato mai di frutti è caricato*.

W. K. KELLY.

THE ADELPHI ARCHES.

A PASSING wayfarer down the Strand may have noticed certain dark archways on the south side; he may have noticed, too, if topographically observant, that the Adelphi buildings stand on level ground, whereas the streets on either hand slope abruptly down towards the river. Those yawning mouths lead to long avenues, ramifications of damp vaulted passages, which constitute altogether the *Adelphi Arches*, lately the subject of much comment. The

next time he is in the neighbourhood, let him enter, and explore the labyrinth to its furthest recesses; let him, indeed, do this twice—once in the day-time, and again by night; for night alone can reveal the scenes of existence which that labyrinth discloses.

Reader,—you and I, who are fortunate enough to have a home, and who perhaps, on some occasion when jaded with long wandering, and hungry, have solaced ourselves each step we took by thinking how soon we should be there, how the creature comforts of supper would soon be before us, and how soon we should commit ourselves to the solace of care-killing sleep,—think what our condition would be without a home, without a supper, and without a bed. Some thirty thousand such there are every night all the year through in this great hive of bricks and mortar to whom an archway,—some place whither they may escape from the elements, and from the noisy turmoil of life without,—stands in place of home. The railway-arches come in for their share, and the dry arches of bridges; but all sink into insignificance by comparison with the labyrinth of vaulted passages which we are about ideally to explore.

The entrance is steep and slippery; always damp, even when the weather is dry. Vainly the neighbouring sewers yawn and gape up through their grating prison-bars to catch whatever of slush and impurity may chance to pass their way. The Adelphi Arches have an insatiate maw for filth. Down the flowing pollutions come, and in they roll. As you cautiously tread your way, each passing footfall reverberates like the clanking of fetters. If you speak, your words come back again like voices of whispering ghouls, with which, indeed, it takes no great stretch of imagination to picture the labyrinth as peopled. This is our preparatory exploration: it is by day, the human creatures who people its recesses by night are wandering. Though midday, the arches would be quite dark were it not for the gas-lights sparsely distributed here and there along the walls, or hanging from the roof. You shiver with cold though you go there in the dog-days. Wandering onward, the sound of wheels meets the ear, and presently through the gloom you perceive a cart approaching; it is filled with ice: for, besides the long vistas of open archways, there are others branching off from the main road, let as warehouses. A bottled-beer purveyor uses one, several confectioners make ice-cellar of others. From one of the latter the cart rumbles away, and is returning to the shop with ice-slabs from Norway or Wexham Lake. The Adelphi Arches are naturally cold, but these ice-cellar make them colder still; the blood in your veins almost threatens to freeze as you pass near them.

Having made our primary exploration by day, let us vary the scene, and learn what the Adelphi Arches have to show us in the dead of night. The clock strikes twelve as we enter. Groups of tired wanderers are flocking in, and taking up their stations as fast as the police will allow them. But now and then one of Sir Richard Mayne's pretorian guards paces his subterranean rounds and disturbs the refugees.

Listen! what is that?

"Beds, beds, beds, a penny a night, a penny a night! Vater, soap, and fire for vitt'ls! All for a penny a night. Now's yer time, ladies and gentlemen; now's yer time."

Wherever a few pieces of money are gathered together, even though they be copper coins, there, in this great mart of speculation, will business be done or attempted.

"Beds, beds, beds! a penny a night, a penny a night! Soap, vater, and fire for vitt'ls!"

The individual from whose noisy throat these cheering promises come is a touter sent out by a Jew from the back-slums of Covent Garden. That Jew keeps a lodging-house for travellers, not quite fitted up in accordance with the act of parliament anent lodging-houses; but the Jew keeps clear of informers. He and the informers best know why.

"A penny a night, a penny a night! Any more ladies and gentlemen as wants a bed for a penny?"

To many of the wandering outcasts who are beginning

their career, to whom the Adelphi Arches are new, and the Jew's touter is a stranger, the promise of a bed for a penny comes like a peace-bearing herald from the world—their enemy. To others the same words are gall and wormwood. Many are without a penny; or, if they have one, desire to save it for the morning's loaf. About half a dozen find a penny each, and accept the conditions. Some pay at once; others, more suspicious, reserve the precious coin until they see with their own eyes what they are to get for it.

"A penny a night! a penny a night! Any more ladies and gentlemen vot wants a night's lodging, with soap and vater, and fire for vitt'ls in the morning, all for von penny?"

But the number of penny lodgers seems fully made up; no more candidates appear to be forthcoming, when occurs the strangest scene of all.

"Vot lady or gent," inquires the touter, "would like to have a night's lodging for a fardin?"

"I, and I, and I," exclaim the former penny candidates.

"Stop a bit," says the touter, beckoning them away. "Is it reasonable for to suppose that any gentleman or lady can get a fust-rate feather-bed, with piller to match, with soap and vater, and fire for vitt'ls, all for a fardin? Vy, the soap's worth all the money." (So, indeed, it would be, if used according to the necessities of his ragged *clientèle*.)

"Then don't get chaffing us, governor; we're tired, so come along."

But the touter's work is not yet complete. He knows how to extract more coins from those seemingly empty pockets.

"Now if four ladies or gentlemen vill subscribe four fardins, and toss,—vy there's a bed for the von vot vins."

He who thinks that every notion of sport and speculation must depart and vanish from regions of misery like those we are exploring, is mistaken. Perhaps there are no conditions of humanity so low, no fortuitous groupings of humanity so hungry, depressed, and jaded, but that hopes and fears remain; degrees of betterness and worseness marked on the dial-plate of existence, revealing a moment of happiness sparkling from amongst the dusky hours of misery, or a moment still blacker than the rest. Ay, there is ambition, hope, solace, trust in some lucky revolution of Fortune's wheel, even under the Adelphi Arches. Many a marquis scheming to be a duke, many a merchant planning increase to his wealth, has looked up to the longed-for crowning-point of his aspirations, and down to the shipwreck of his hopes, with no stronger emotions for the time being than those experience who contribute their farthings to win the golden chance of a bed for that night.

A ragged group assemble under one of the gas-lights. The bed-touter has a sort of rough wit; a talent which got him his place, and which helps him to keep it. He sets forth in glowing language the Elysian delights of his employer's lodgings, until smiles are evoked upon countenances so wan and worn that you would have supposed they could not smile. The touter's eloquence is not fruitless; pockets are fumbled, and rags are shaken, secret ways leading out of pockets into the tangled recesses of shreds and patches are probed with claw-like fingers, until farthings come forth. The destiny which rules over the Jew's beds is thus made apparent. The touter tosses a farthing. "Heads," cries one of the first group of four. "Heads it is." "Tails," cries a second. "Very sorry, it is heads," says the touter; "stand aside." In this way each group of four is weeded, until one remains; to that one the night's lodging belongs. On her or him the Adelphi fates have for that night been propitious.

Thus group after group are disposed of, until the first handicap is played out. Gambling is contagious even here. Many of those who have lost their first chance discover other farthings, and make another handicap. Again the distribution of beds is repeated. At length the touter departs with his recruits; and the Adelphi Arches, weary of their prosperity, are tenanted by the very dregs of the London misery.

What voice is that which comes from the fog depths

of the cavern? A baby's? Yes. That crouching female figure, from whose pallid face the last drops of life-blood seem to have departed, is a mother. That baby's voice fills these dark regions with shrill echoes, but they do not seem to pierce the darker labyrinths of the mother's heart. There she sits, crouching and statue-like; but on approaching nearer, I see her bosom heave; I hear choking gurgles in her throat; I note the convulsive twitching of her fingers, more telling than noisiest grief. Hers is the deeper agony, too deep for words. 'Tis the old tale, perhaps. That mother may have been happy once, hopeful, loving, trusting. But she seems to have quaffed the cup of suffering to its dregs. She is tempted now, and the river is near. To-morrow you shall see placarded in front of the police-offices a statement to the effect that the bodies of herself and her infant have been found in the Thames.

SOMETHING NEW ABOUT THE CANARY.

It is far too much the custom among us to keep our little pet-birds confined to their small cages; and we are apt to express wonder if, under such circumstances, they are unwell, moody, or indisposed to sing. The wonder is that, so treated, they ever sing to us at all. As for their being in good health, that is generally owing to the natural vigour of their constitution; no thanks to the thoughtfulness of their masters and mistresses. But *all* bird-keepers are not thus thoughtless. Many throw open the doors of their little prisoners' cages, and let them have the range of a room; and very delightful it is to see them roaming about in the full enjoyment of liberty. Their voices, how sweet! their antics and mimic performances, how grotesque and amusing! But I am about to tell of something even better than this. What if I propose letting our *favourite Canaries have their full liberty in the open air*? This may be done readily, under certain circumstances; and with extraordinary results, as I shall show. To view a Canary in all his glory, he should be sprightly; in full activity, and not restricted to space. No bird enjoys freedom more than he; yet how seldom is it granted him!

A friend of mine, residing not more than some sixteen miles from this great metropolis, has at the present time a whole colony of Canaries *living and breeding in the open air*. They are "free" as the air they breathe, unrestricted in their flight, thoroughly domesticated in their habits, and tame as any heart could desire them to be.*

I have long asserted, and *proved* it in my *Book of British and Foreign Song-Birds*, that the Canary is a hardy bird. When on the wing, he can endure *any* amount of cold, and winter anywhere with the stoutest of our native birds. In confinement it is different; deny him exercise, and he suffers like his owners.

I will now describe the spot where this fairy bird-land lies concealed from the prying eye of the public. I have seen it often, and revelled in the sight quite at my leisure. On entering the picturesque mansion, the eye is arrested by an extensive and charming view from the window. Seated,

* I hardly need say that I am no stranger to what may be done with birds in a flower-garden. Thirty years' experience with nearly 400 choice pairs—all of them rare songsters too—have suggested no end of interesting experiments "in the open air."

or rather embosomed in its own grounds, from the windows downwards there is a verdant lawn, extending by a gradual slope to the margin of a large open park—there being no interruption to an almost unbounded prospect. Immediately contiguous to the dwelling-house is an ample shrubbery, beautifully laid out, and comprising trees and shrubs of all kinds. Here the birds nest, and hold their conferences. This shrubbery extends all round the house. To the left, immediately beyond the flower-garden, and in a shady corner, is a sheet of water overarched by trees. Here the cattle resort to drink; here, too, the birds assemble to enjoy the cool breezes, when the blazing sun banishes them from the park and open fields.

Such is the spot where dwells this happy family of

Canaries. Here they live, day and night, in perfect liberty; here they build their nests; here they lay their eggs and rear their young; here they play; here they sing.

Sometimes a nest is found in a Wistaria, immediately beneath a window. Look at it if you will; pass your finger over the back of the sitting mother: it is no offence. When the young are hatched, and three days old, look at *them* also if you will: the parent is pleased, and her offspring are fearless. So among all the trees and all the bushes. I speak from actual experience. It is a most amiable sight to behold these pretty creatures, of all hues and all colours, feeding their young. And how the papas make the welkin ring with their floods of melody!

Here let me remark, that the musical powers of the Canary, heard in an open park or shrubbery, are novel as they are beautiful. When thus "free," he is heard to perfection. Birds in confinement are under restraint. They sing, it is true; but their song is monotonous. It lacks the energy and spirit of a roving bard.

These birds are free of the house; they eat at table, fly on the young ladies' shoulders, and make themselves "quite at home" with the household. Moreover, their food, in choice variety, is placed for them in a very large cage on the lawn, which they enter by certain small openings. Would you detain them, a slight invisible cord, skillfully touched by a gentle hand, bars every point of egress; they are your prisoners!

For a succession of years has this colony existed and thrived; and many a treat have I had, while contemplating what may be accomplished by only a little tact and a kindly disposition.

I have been invited, while on a recent visit to Dorchester and Weymouth, to establish a similar colony at West Lulworth next summer. Trees are to be planted there, shrubs raised, and all sorts of preparations are to be made. It is a most lovely and picturesque spot; and if the savage gunner can be held in check, and his bloodthirsty propensities arrested, such a Canary Island as I shall establish in that cove will be one of the world's wonders.

It may be asked, What about *the cats*? "Thereby hangs a tale," which needs not be unfolded *here*. Canaries and cats (vermin) cannot "live" together. Let this suffice. *Au reste*, there needs only a suitable site, a snug retreat away from a public road, a quiet neighbourhood, and kind neighbours,—you may then have Canaries living and breeding in your own grounds.

WILLIAM KIDD.

SPECIMENS FROM RECENT EXHIBITIONS; NO. XX.

PAINTED BY H. S. MARKS.

BOTTOM ENACTING PYRAMUS.

BOTTOM ENACTING PYRAMUS.

By H. S. MARKS.

Who does not remember Bottom, the inimitable Bottom, whose hungry zeal made him desire to act a whole play by himself, and who truly said that his chief humour was to be a tyrant?

This is he, as Pyramus, upon discovering the mischief "that fearful wild-fowl, your Lion," had done to the garments of Thisby the tender, his lady dear. He might have been Thisby himself, and torn by the Lion; nay, wished to be the Lion, with unpared nails, to roar "as gently as a sucking-dove," and tear Thisby, and cause himself, as Pyramus, to weep. But even he could not divide himself into three characters,—Lover and Lady and Lion,—so was perforce content with that of Pyramus, "the sweet youth and tall."

Playing Pyramus he is, happy in his glory, placed before his fellows, and singly filling the scene. He had had his interview with his other half, his would-be self, his Thisby, and was pledged to meet her at Ninus' tomb in the moonlight of that Assyrian night. Lion and Moonshine had had their say, when Pyramus (Bottom) enters again to us, the torn mantle of Thisby catches his sight, and he begins to "condole" in this measure:

"Come, tears, confound;
Cut, sword, and wound
The pap of Pyramus:
Ay, that left pap,
Where heart doth hop:—
Thus die I, thus, thus, thus.
Now am I dead,
Now am I fled;
My soul is in the sky;
Tongue, lose thy light!
Moon, take thy flight!
Now, die, die, die, die, die."

We have before us Mr. Marks's idea of Bottom and his acting: his dull eyes, and his mouth without compression of the lips, betraying the conceited habit of a mind at once domineering and weak; the coarse, lax, and flabby cheek forms with these a grotesque contrast to the grandeur of the high-crested helmet, whose side-wings are in sarcastic allusion to the ears he wore when he was "translated." The stage-tradition that the character of Bottom should be played without a beard is in keeping with his own inquiry as to what coloured one he should best play Pyramus in. He was certainly one of those little fussy mortals who laboriously scrape nothing from their chins,—whom nothing but flattery will make satisfied with a thing,—such delightful flattery as was administered by that diplomatist Peter Quince (he ought to have been a minister of state) when deciding that the part of Pyramus should be played by Bottom only because he was a "most lovely gentleman-like man"—"a sweet-faced man." Upon the administration of this sweetmeat, our "bully Bottom," as he was called, subsided into Pyramus, and has rehearsed and played it before the world's inextinguishable laughter since that day.

Look at the way in which he holds the sword, as if it were a tool of his handicraft—a shuttle of his loom. Look at his other hand, which the habit of labour has made to resemble a paw, the fingers separating themselves in purposeless distension. Look at his legs, and the shambling, gait they indicate,—at his feet, which are like paddles, worthy supporters of such a corporeity. They were a curious set, this Bottom and his companions; but we must not forget that it was all well meant for loyalty, and that for Theseus's sake their parts were "conned with cruel pain."

Let us with Theseus thank him and them, and, for Bottom especially, hope that the intention was accepted as a service; or, in the words of Francis Flute, that the duke thought so well of him, that he hath not "lost sixpence a-day during his life; he could not have 'scaped sixpence a-day: an the duke had not given him sixpence a-day for playing Pyramus, I'll be hanged; he would have deserved it: sixpence a-day, in Pyramus, or nothing." L. L.

ORIENTAL AUTOBIOGRAPHY.*

THE book of which we have given the full title below is perhaps the most important book of the season, and will for many seasons remain a most important book. It is an autobiography of a Mohamedan,—not of a Mohamedan only, but of a Mohamedan gentleman;—a gentleman with all the advantages of birth and education; an orthodox Mohamedan, with his mind yet liberalised by intercourse with Europeans, preferring, indeed, his own customs and creed, but not ignorant of those of others. Such a work is of the greatest value. We know ourselves better by knowing him; our own religion better by learning his; our own nationalities better by understanding those of Asiatic peoples. We have underrated their minds, their manners, their beliefs. We have not seen any of those things so clearly as they are made to show themselves in this most entertaining of volumes. Nor have we had an opportunity of properly apprehending how we appear to the view of orientals,—those, we mean, of the enlightened castes, and whose minds are as free as ours to admit all manner of knowledges. That opportunity this remarkable work presents; and let us avail ourselves of it in a conscientious spirit.

The work commences with the pedigree of the author, beginning with Adam and ending with the Sheikh Lutfulláh—ninety generations. His father, Sheikh Muhammad Akram, was a Mohamedan of the Sacred Order, a descendant of Shah Kamáluddín, who was a great saint of his time, in the province of Malwa, being the spiritual guide as well as moral preceptor of Sultán Mahmúd Khilji. From the liberality of this sultan the family inherited certain mausolea, a mosque, three hundred acres of land, and a pension; rights which were enjoyed until A.D. 1706, when, after the reign of Aurangzeb, the Maráthas having possessed themselves of the province, confiscated both the lands and the allowance, leaving, however, from the former about two acres for the support of the writer's great-grandfather. "Thus," adds he, "was a family which for a period of nearly three centuries had enjoyed affluence reduced to a state verging on destitution. To use an Eastern metaphor, the light of the day was withdrawn, the shadows of night had gathered around them."

Lutfulláh himself made his "first appearance in this world of wonders in the ancient city of Dháránagar, in Malwa, on Thursday the 7th of Rajab 1217 A.H., corresponding with the 4th of November 1802 A.D." He was brought up from the age of four years by his mother, then a widow. Their place of residence was liable to attack from the Pindarees. At the end of a year his poor mother had exhausted the jewels of her dowry, on the sale of which she had subsisted during a period of dearth, pending which his uncle's means were insufficient to provide necessaries. Lutfulláh was a mischievous boy. He caught frogs and slily put them into the ladies' work-baskets. At five years of age he proved too troublesome to be kept at home, and was sent to school. He was a ready pupil, and in six months knew his Kur'an "as well as any mullá," and all the prayers of Islám by rote.

Being removed from the Alkoranic school, Lutfulláh next received instruction in Persian and the Arabic grammar. He became also a poetical student, and by the age of eight he had read through the works of Sâdi. About this time he was saved by a benevolent Brahmin from drowning; a death contrived for him by his nefarious cousins. This accident led him to reflect on the subject of religion. His mind was startled by the prevalence of polytheism, and the various opinions held by Christians on the doctrine of the Trinity and the person of their prophet. He contrived, however, to establish himself in sound Muslim principles,

* *Autobiography of Lutfulláh, a Mohamedan Gentleman, and his Transactions with his Fellow-creatures; interspersed with Remarks on the Habits, Customs, and Character of the People with whom he had to deal.* Edited by EDWARD B. EASTWICK, F.R.S., F.S.A. London: Smith, Elder, and Co., 65 Cornhill.

and by the age of thirty "he knew what he was, and how to perform his devotions to his Creator." He begs, however, to observe that he is still ignorant of his first origin, and of what he is to be on his being transferred to the undiscovered country "from whose bourne no traveller returns." Our readers will perceive from this brief citation that Lutfulláh is a reader of Shakspeare: quotations from him, indeed, frequently recur, as also from Burns, Lord Byron, and others.

He speaks of the appearance of European adventurers when they first alarmed the people of the East. It was, among other things, affirmed that they

"Had no skin, but a thin membrane covering their body, which made them appear abominably white. They were perfect in magical art, which made them successful in all their undertakings. They did not believe in our blessed Prophet, and they called themselves Christians; but would not act upon the laws of the sacred Anjil, which holy book they had changed in several places to serve their worldly purposes. Most of them still worshipped images, and they ate every thing, and particularly things forbidden by the holy Moses, and this in spite of the order of the sacred Anjil (St. Matthew, v. 18 and 19); nay, they did not spare human flesh when driven to extremity. They had made three Gods for themselves instead of one,—the only Omnipotent Supreme Being,—contrary to their first commandment; and, most absurd of all, they attributed to the Almighty God the having wife and children; and by the same token they called their prophet and themselves Son and children of God. Such reports were the topic of almost all conversations, and many other things were said against them, and only one in their favour,—that they were not unjust; but in the administration of justice they never deviated from the sacred book of the ancient law of Solomon the son of David."

These characteristics are not unamusing; nor are his remarks on polygamy, which Lutfulláh prefers to monogamy, though, like many of his countrymen, he never practised it. On an enlarged acquaintance with European society, and even after his visit to England, he maintains his Mohamedan notions on this point. Summing up the character of the English, he says:

"They are entirely submissive to the law, and obedient to the commands of their superiors. Their sense of patriotism is greater than that of any nation in the world. Their obedience, trust, and submission to the female sex are far beyond the limit of moderation. In fact, the freedom granted to womankind in this country is great, and the mischief arising from this unreasonable toleration is most deplorable."

Such is the picture which is drawn of us by Mohamedan intelligence. We recognise therein—we mean, the intelligence—a degree of purity, simplicity, and primitiveness,—qualities which particularly characterise Lutfulláh's own creed and conduct. First comes the simple teaching of his mother, enforcing the belief in God, and directing him to refer all his actions to the superintendence of reason and conscience. We then find him shuddering with horror at entertaining for a moment the notion of the eternity of matter. This story deserves to be told *in extenso*.

"Previous to my settlement at Khaira I made a trip to Mandavi to satisfy my curiosity in seeing the sea for the first time in my life. On beholding the immense body of water, and its regular ebb and flow, I was struck with astonishment at the unlimited power of the one Supreme Being, before whom the whole of our universe is no more than an atom. Deeply engaged in such meditations, as I stood one evening at the seaside looking at the waves on which the large ships moved up and down, I began to think of the Jain tenets, according to which matter is eternal and self-existent; but before arriving at the conclusion of the blasphemous syllogism I was startled by a severe bite from a dog in the calf of my leg, who came slyly behind me, and, after punishing me for my crime, ran away like a shot. I followed him with my stick for a little distance to revenge the injury, but in vain; the animal vanished from my sight, and I returned home with very great pain in the leg."

As we have already suggested, the subjects of polytheism and idolatry also troubled him, and particularly the Brahminical practice of suttee. On this subject he wisely remarks:

"Religions pure in their origin in course of time beget superstitions. The religion of the Hindús in its origin is pure and

sublime, as will be clearly seen from the books of their Ved, or theological works, which were in existence about 1800 years before our era of the Hijra, or about 1100 years before Christ. They consider the only Supreme Being to be the self-existing ruler of the universe, styled Bramha. His first attributes are the following Trinity: Bramha the Creator, Vishnu the Preserver, and Siva the Destroyer. These attributes have each a peculiar image, as a medium required for the material being to think of the immaterial being, who is one creator of all the visible and invisible worlds. He is the Almighty, who rules and governs all His creation by a general providence, resulting from first-determined and pre-established principles. From so sublime a source of the genuine principles of their religion runs the pure stream of their law, which strictly prohibits all the crimes punishable by the laws of the present civilised world. Besides, suicide, infanticide, and sacrifice of all kinds, not only human but of any kind of animals, are ranked amongst the heinous crimes. But superstition and fables, and the selfish character of their priests, have in the lapse of ages produced immorality and corruption to this degree, that the generality of the Hindús of this time are no more than infidels in the high opinion of Vedantists or theologians."

He mentions in the same chapter the custom of a schismatic class of Mohamedans, who receive a certificate of the priest for every dead follower, addressed to the Archangel Gabriel, recommending a place in the blissful region suitable to the amount of the fees paid on such occasions, which document is carefully placed in the shroud of the deceased. In relation to this practice, Lutfulláh tells an amusing story of Dr. C. D. Straker, the civil surgeon of Súrat for many years, who attended the mullá (or high priest) during a bad illness:

"When it came to the month of Ramzan (the Mohamedan Lent), the doctor told his reverend patient not to observe fasts until his recovery, as that act of devotion at that juncture would prove injurious to his weak constitution. But the crafty priest, in order to show his religious zeal, observed that the omission of an indefeasible duty, strictly ordered in his sacred book, must be the cause of a severe punishment in the world to come. To this Dr. Straker replied, with the characteristic frankness of an Englishman, 'No, no, Mullá Sáhib, don't you fear about that; I will give you a certificate, which, being shown to your brother archangel, will surely procure absolution for this necessary transgression on your part.' This remark of the pure-hearted Englishman produced a smile mingled with mortification from the priest; and the bystanders could not help turning their faces to laugh, especially two or three orthodox Mohamedan servants, who were obliged to leave the room to conceal their mirth."

Pure theism on the one hand, with a holy dread of every variety of superstition on the other, would, judging by Lutfulláh's example, appear to be the state of religious sentiment most natural to the Mohamedan gentleman. He loses no opportunity of denouncing the mischief arising from popular ignorance and credulity. It is thus he speaks of the people of Kach:

"Infanticide, the most heinous crime of all,—a crime unnatural and uncommittable even by irrational beings,—is committed by men of this country, and that not by common people, but by the governing race of the land, who are Járájá Rájputs, originally from the Summa tribe of Sindh, who governed that part of the world in ancient times, under the title of Jám. These people must have brought this horrid custom with them from their original country. It could not by any means have been invented by the Hindús, who detest the very idea of the act. These Járájás think themselves so much higher than other Rájputs, that they consider giving their daughters in marriage would ruin their character. This absurd pride has hardened their hearts to the perpetration of infanticide to such an extent, that on inquiries I found the population of Kach to be five hundred thousand souls, out of which there are twelve thousand Járájás, and of these but thirty-seven are females. The country now fortunately falling under the control of the British, the late Ráo having been deposed for his vices, his son Ráo Desaljí, a minor, remained under care of the English government until he came of age, during which time many reforms were effected."

As an interpreter of languages, Lutfulláh became attached, in various capacities, to the English government in India, and on every occasion expresses his admiration of it. This relation of Lutfulláh to ourselves it is which makes him so desirable an acquaintance, and renders an inquiry into the basis of that relation especially interesting. Sus-

pending any remarks on that topic to the close of our article, let us dwell yet awhile on Indian customs. Here is a picture of the Ghirnar mountains and their inhabitants :

"This range, though inferior in loftiness to other mountains of India, is very pleasant to sight, being fertile and verdant every where. It is held sacred by all the Hindús according to their legends, whence the ancient name is Rewtachal. One of its branches, extending towards Palitának in Goelwár, is decorated with Jain temples of various sizes, and regarded by that class of the ancient Hindús with great veneration. The mountains abound with game of every description, from the royal lion to the quail. Going about in this wilderness, one sometimes happens to see a Hindú monk, whose zealous austerity prompts him to give over all, and devote his life to the worship of the Deity uninterrupted by worldly people. He lives upon the vegetable productions of the place, makes fire by rubbing two pieces of wood against one another to warm himself in the cold nights, and keeps his body rubbed over with ashes, which thin cover keeping the pores closed renders him independent of artificial covering. After ten or twelve years' life in this state he becomes like the wild beasts, and runs at the sight of man. The people in this part of the world have a mistaken idea that these devotees are cannibals, and devour man's flesh if they can get hold of a single unarmed person; but this is not credible. One morning, as I marched with my scholar, we entered into a long conversation upon the subject of spirit and matter. Being deeply engaged in this very interesting topic, he left his party in charge of a subordinate officer, and desired me to accompany him, at a little distance from the road, to talk more fully and with less interruption. So we turned our horses to the left of the party, and walked on engaged in confabulation, taking care, however, not to lose sight of our small troop. All of a sudden we came up to a bonfire without any human being near it. The fire being alive, it seemed as if somebody must have been there. We lighted our cheroots, and asked our grooms the cause of the fire in that solitary place. Their unanimous reply was, 'that the fire belonged to some Aghori Babá (i. e. omnivorous father), and that it was dangerous for us to stay there longer.' This excited our laughter, and we proceeded on without any concern about the matter. After going a little further, we came to the side of a valley enormously deep; and on looking down we had the honour of seeing the monk himself, the demigod of the Hindús, about a thousand yards from us, running down as fast as he could, cautiously looking behind every now and then, as if somebody were pursuing him. The poor grooms, on seeing him, were overpowered with fear, bowed to him, touching the ground with their foreheads. My scholar, with European curiosity, hailed the man, and beckoned to him as if he had to make some important communication to him; but these acts of civility, instead of producing the desired effect, accelerated the flight of our unenvied host, and the impracticable declivity altogether prevented my curious European companion from following. So having recourse to our telescope, we had a full view of him. He was a strong and powerful man, the silvery hair of his head hanging over his shoulders dishevelled, and his long beard in the same state; his eyes were quick, and sparkled with fire, and his shaggy body was rubbed over with ashes. Having seen so much of him, he vanished from our sight."

Oriental eccentricities such as these appear to excite as much astonishment in the Mohamedan as in the Christian mind. We mention this because there is an evident tendency to confound in one common description the characteristics of the East. There is no sympathy between the Muslim and the Brahmin; the superstitions of the latter are abominations to the former. But the mind of the Mohamedan is too bare in its purity; it ignores art, and cannot understand the lighter amenities of European life. Lutfülláh's remarks on many things in London are curious from their naked simplicity and narrow convention. Thus, for example, while admiring St. Paul's Cathedral as not having its equal in the world, he is loud in his dislike of the multitude of statues and images, "all of them scientifically sculptured," and, as he knew, "not designed for worship;" but, he adds, "a temple dedicated to sacred purposes, whether humble or majestic, ought to be plain, so as not to withdraw the attention of the congregation from the sermons and preachings." By the time he arrived at Westminster Abbey this feeling had subsided. But a similar purism is obvious in his description of the performances at the Italian Opera. Yet even this is exceeded by his account of the Diorama in Regent's Park. He calls it "a place of incantation;" and the room into which his party was conducted by the keeper was

"as dark as an infidel's heart." There too the said keeper might have maltreated them if he had liked, but kindly offered them chairs instead. Then it was that they heard distant music, and beheld a beautiful scene—that of a frosty morning, with a rough clownish vegetable-vendor at the river-side asleep in his boat, and his wife and children also sleeping on the cargo that he had landed. A palace was beside the stream, and its inmates engaged in their various employments. After a while, the evening came on, and the scene changed: the man was transformed into a pretty woman, the stars were visible, and the moon rose. The palace moreover was illuminated with lamps and chandeliers. Other changes succeeded: the interior of an empty church, but the next minute filled with the congregation. "The morning," continues Lutfülláh, "then turned to day, and the day, in a few minutes, into evening; and then night came on, and then, to our great delight, we were helped out by the keeper from this house of false magic." Such was the impression made on the cultivated mind of a Mohamedan gentleman. Some of his companions, he tells us, would have the house to be under the power of evil spirits.

The limits of the Mohamedan intelligence became manifest also during a visit to the Polytechnic. Among other things, the diving-bell much amused the Asiatic party. Lutfülláh undertook to descend, but his chief and companions would not only not venture, but dissuaded him from the attempt, saying it was "an act of great imprudence to endanger life in such useless sport." Nevertheless, pronouncing his Bismillah, he got into the bell with four Englishmen; and returned with safety, to the surprise of his companions.

In particulars like these we have a gauge whereby to compare the measure of mind in the East and in the West. That of the former needs enlargement by knowledge; science, philosophy, remain in their infancy; and the men, however civilised, are yet only children of a larger growth.

The name of our hero, Lutfülláh, being interpreted, signifies "the Favour of God." The appellation is in a measure prophetic. Lutfülláh was destined to work his way out of obscurity into light, through many perils. Even as a boy he was esteemed learned, but he was at the same time a most mischievous imp, and justly incurred punishment by his dangerous tricks. He too, in turn, was the victim of the machinations of his relatives. Redeemed from the death which they had purposed for him by the good Brahmin, and recovered from the disorders of infancy, we next find him travelling with his uncle to Baroda, and making the personal acquaintance of the English, whereby he was enabled to correct his former notions founded on hearsay. Four persons excited his curiosity, two equestrians and two pedestrians. They were engaged in conversation; "their jargon sounded harsh and wild to his hearing; their dress tightly fitted their bodies, without any skirt to screen such parts as the law of modesty has taught man to conceal." These conventional notions of costume, and their bearing on English morals, are exceedingly noteworthy.

The time arrived when the family-home became intolerable to Lutfülláh, and he fled from it in despair. His adventure with the Hindú shepherd, and other simple incidents of a similar kind, read like a chapter or two cut out of the *Pilgrim's Progress*, and are, in fact, as exquisitely beautiful as they are undoubtedly true. His story of escape from the hands of a Thug is most interesting, and reads like a patriarchal adventure. His visit to Delhi also must at this time be especially interesting; but the more characteristic event is his acquaintance with the Jamadár Músá Khán, who hired him as secretary at a salary of ten rupees per month to keep the accounts of "his twenty-five Patháns." These turned out to be thieves. Unaware of their character, and deceived by their apparent piety, Lutfülláh travelled with them to a wild Bheel valley, when they threw off the mask. In that valley, said Músá, resided his lord and master, the chief of the Bheels, by name Nádir, who always had about five hundred of his tribe ready at his command; who, with

a party of Afghans, plundered caravans and travellers, and infested the passes and roads of the mountain. The booty was brought to Nádír, and divided into three shares. Lutfúlláh was fain to console himself with the circumstance that he had nothing to do with their excursions, and that their accounts engaged of his time only about half an hour every month. He was compelled hypocritically to consent to become the accountant of these robbers for the stipulated period of a twelvemonth. The following is a portrait of the chieftain:

"As the evening began to set in we reached a cave, at the mouth of which we beheld a black well-made man squatting on a four-legged frame interwoven with fibres of wild creepers. He was also naked as the others; but a pair of thick golden bracelets on his wrists, and a sword placed before him, in addition to the usual bow and arrows, and a chafing-dish with live fire at a little distance, encircled with several squatting Bheels, clearly showed that he was the chief of the banditti. Músá, looking at him, saluted and said, 'There is Nádír Bhái, the good prince of the wilderness; make your respects to him and go home; I will be with you after a little while.' So all of us raised our hands to our foreheads to the Bheel, who got up from his seat, returned our saláms, and desired Músá to approach, which he did, and sat near him on the ground, leaning against one of the feet of the rude throne."

Is not this exquisitely primitive? And even such is the Orient to this day. The book is, as it were, a piece of photography, presenting exact views of persons and places, without art, and unconscious of any plan. We too have the Muslim creed in fate, or destiny recurring. If we have found our hero in bad company, he was not to blame; he "must submit to the decrees of his fate in the same way as man, wise or fool, whether endowed with the philosophy of Plato or the stupidity of Khozib, whether with the crown of royalty on his head or the wallet of misery over his shoulder."

These Bheel marauders were severe politicians. When one of their own party happened to be disabled by wounds from keeping up with them, they immediately cut off his head, which they buried or burnt to avoid being recognised, and to prevent the secret being divulged, as the individual, being tortured, might confess and bring on a general misfortune. Lutfúlláh had to be cautious with masters like these. At last he escaped, owing to an assault made by the Bheels upon the Afghans, who were about to leave the former, and might betray them. He ran for hours, until, nature exhausted, he stayed his flight in a forest, and rested for the night on the bough of a tree. For four days and nights he travelled in this condition. At last, after some picturesque adventures, he arrived safe at the village of Hásilpur, and afterwards reached the city of Indúr, where he found his mother, now again a widow. Not long after she died, leaving with him the rule of faith and conduct to which we have before alluded:

"My son, be virtuous, and guide yourself by your reason and conscience in the world. Take care of that orphan-boy of mine, who is only in his sixth year, and has no one else to look to; treat him with brotherly affection, and may God be your protector wherever you are. As for me, I am now perfectly sure of being obliged to return to the same region whence I was obliged to come."

Words these as sublime as they are simple! We must now contract within the narrowest limits the remainder of this interesting narrative.

Soon after his mother's death, Lutfúlláh, having studied the English language, received employment as post-clerk in the Honourable Company's service, and resided for some time at Dharampurí, in a Hindú temple, with his suite of seven harkáras, or runners. He held this office for a short time only, and next obtained a situation with Lieutenant B. MacMahon, the Bheel agent at Nálchá, as Persian teacher, and afterwards acted in the same capacity with Lieutenant C. F. Hart. From this point Lutfúlláh is connected with the European world, and his mind, as far as it could be, became Anglicised. Up to the year 1835, indeed, Lutfúlláh regularly held the profession of a teacher of the Persian, Hindústáni,

Arabic, and Maráthí languages to the new-comers from England, and travelled with them from place to place. At Sátará he married, but was unfortunate in his attachment, his wife being pettish and hypochondriacal. In Súrat he found many scholars, and amongst them W. J. Eastwick, of the 12th regiment Bombay N. I.—a name connected with that of the editor of this interesting volume. He had also a son whom he named Kudratullah, but who died early; and about the same time he entered the service of the Nawáb of Súrat as secretary, and afterwards filled an office under the political agent in Káttíawar, which he resigned in order to accompany his old friend Captain Eastwick.

In the course of this narrative we find Lutfúlláh mixing with the Sindhis, and learning the idiom of their language by conversing with them; and by this means we become acquainted with the feeling of certain eastern peoples towards ourselves. These people, sitting at the doors of their tents, have no other occupation than political talk. They are afraid of English encroachment, think sometimes of resisting, or if they acquiesce, do it in this surly fashion:

"'A man,' said a white-bearded Sindhi, 'may overmatch another, or perhaps two or three, if the contest is to be decided by the sword; but these cowardly satans have no sword, and if they have any, it is as blunt as your walking-stick. They will kill you with their rascally shots whilst you are a mile or so off from them, and then what is the remedy?'"

Lutfúlláh endeavoured to impress upon them that the Sindhis stood in no danger of the English, whose forces were then passing through the country for the purpose of protecting their possessions in India, as well as the Amírs' territory, from foreign aggression. To this they would reply with a chorus of laughter: "What you say, sir, may be true; but we are rude people, we cannot comprehend high policies of government. Ha, ha, ha!"

The high policies of our government are, indeed, far too high for these populations, whose intelligence nevertheless is not to be scorned, though their manners be rude and primitive and their knowledge prove very contracted. In our intercourse with the natives we have overrated them in one way and underrated them in another, and in both ways have made fatal errors. These considerations are at this moment intensely interesting; and, indirectly, we know of no book so likely to give the right tone of thinking on the subject as the Autobiography of Lutfúlláh.

A VISIT TO CARTHAGE.

By BESSIE RAYNER PARKES.

II.

ON reaching the deck, a fine but most desolate scene presented itself. At the distance of half a mile lay Goletta, the port of Tunis, a small strip of buildings—arsenal, custom-house, fort, two "palaces," and a few smaller dwelling-houses. To the left, at the further end of a long, shallow, salt-water lake, or lagoon, lay Tunis, shining white in the morning sun, and about ten miles distant; to the right the grassy uneven plain, backed by low hills, where once stood Carthage. A bluff headland, near which is the modern village of Carthage, lay beyond, still farther to the right. The panorama was nearly encircled by mountains; the chain was carried out by precipitous islands rising from the sea. The odd shape of these mountains is hardly to be described, except by saying that they reminded me of cheese that has been cut by a knife. I never saw so many straight lines and approximate right angles in a hill-chain before.

After long delay by the slow-boated Turks, we were at length landed at Goletta, and received by M. Cupisol, who acts as both French and English consul. As we passed along the quay, we observed the pure Mussulman and half-savage look of the buildings and people compared even to Algiers. Queer painted houses; wood-work of scarlet, yellow, and all smart hues; and little, dwarfish, Tunisian soldiers

keeping guard, and looking at the European strangers with an air half lazy, half ferocious.

We were much nearer the site of ancient Carthage than we were to the city of Tunis, and therefore determined to visit the latter while yet the heat of the day had scarcely commenced. On March the 16th the temperature of northern Africa was about equal to that of our warm summer-days.

M. Cubisol, our consul, promised to see to our luggage, and we were soon seated in a hired carriage and *en route* for Carthage. Such a carriage! I gave in a former letter some description of Algerine omnibuses. This was a vehicle with four seats, and a roof which could be put up and down at pleasure, and the driver's seat was also protected from the sun; the whole an unutterably shabby turn-out. I saw afterwards various other forms of carriage at Tunis, evidently of European build, and reduced to the last stage of vehicular existence; giving the idea that the bey was in the habit of buying up cheap every old phaeton, barouche, *calèche*, or cab that had been pronounced unfit for use by Parisian authority.

We soon reached the edge of the grassy field where lie, bleaching in the sun of centuries, the scattered bones of murdered Carthage. It can hardly be called a plain, as there is on the whole a gentle inclination towards the sea. We made first for the house of Mr. Davis, who is excavating for the British Museum, and who resides with his wife and children in a square erection of quite modern build. The nearest habitations to his are a bath and mosque, close together, and of dazzling whiteness. I call them habitations because there are always residents attached to these Mohamedan institutions. From this point we took a general view of the ground, which swells up and down, broken here and there by rugged lumps of ruin. Nothing approaching to an entire ancient edifice is to be seen, and the massive fragments which rise above the turf are to be attributed to the later times of Roman occupation. Every vestige of Punic Carthage lies under the level of the present soil, overgrown with grass, asphodel, and tare.

The immediate foreground was occupied by Mr. Davis's garden, a gentle horticultural pretence with which the English ladies were unwilling to dispense. Close to his house he had caused pits to be sunk,—pits from fifteen to twenty feet deep,—which appeared to lead to certain ancient tombs; for bones and pottery were brought up, and lay about the displaced earth. Some of the gentlemen went down by a rope; but the aperture was narrow, and the descent difficult for a woman, so I did not go down. In the house was a miscellaneous collection of articles,—beads, little idols, and fragments of glass; which latter peel, from decomposition, into thin laminæ, and exhibit beautiful prismatic colours. There was also a small black stone inscribed with Punic letters, as yet undeciphered. The bey stipulates that any articles composed of the precious metals shall be paid for if found, otherwise he appears to leave the investigation unmolested. On the ground-floor of Mr. Davis's house were certain mosaics on a large scale, intended for the British Museum. One design represented a priestess—Dido, perhaps. I apprehend that considerable doubt must exist as to whether they belong to Punic or to Roman days. Many of these mosaics had been carefully backed by new cement, otherwise they would have crumbled in their removal to England.

Leaving the house, we proceeded towards the famous cisterns, which, with the exception of an aqueduct, form the only remains of Punic Carthage in tolerable preservation. The road, as I said before, is very unsafe; and though we had one horse with us belonging to Mr. Davis, he was soon led by the bridle riderless. Here and there is a cultivated field; but the greater part of the ground, so far as I could observe, is rough with the remains of antiquity, and treacherous with deep holes, through which the pedestrian might at any moment fall headlong some twenty feet into a black oblivion. Either these cavernous abysses were the cel-

lars and cisterns of the ancient houses (such were sure to be an important feature in the architecture of that burning climate), or else the lower stories yet standing have been gradually buried in the course of ages by accumulated rubbish. This has happened in Rome to an astonishing extent; and the foundations of ancient London lie far beneath the present level of Chepe. The field of Carthage being thickly overgrown with a low but luxuriant vegetation,—tall grasses, brambles, and many bright and beautiful flowers,—the reader may imagine that it proves rather dangerous walking.

Presently the traveller is called upon to descend a sloping excavation towards certain vaulted holes or chambers, and finds himself at the extremity of the enormous range of cisterns, seventeen in number, side by side, with vaulted roofs, and made accessible by two corridors running along either end. These are yet partially filled with water, and are lighted by shafts from above. The masonry is of cyclopean size, and the grand masses of light and shadow surpass any effects I have seen in architecture. There appears now no doubt that these remains are those of public cisterns; though Lady Mary Wortley Montague says that they were thought in her time to be elephants' stables. We subjoin an extract from her letter to the Abbé —, written from Tunis 139 years ago, viz. July 31st, 1718.

"At Tunis we were met by the English consul who resides there. I readily accepted the offer of his house for some days, being very curious to see this part of the world, and particularly the ruins of Carthage. I set out in his chaise at nine at night, the moon being at full. I saw the prospect of the country almost as well as I could have done by daylight; and the heat of the sun is now so intolerable that it is impossible to travel at any other time. The soil is for the most part sandy, but every where fruitful of date, olive, and fig trees, which grow without art, yet afford the most delicious fruit in the world. . . . About six miles from Tunis we saw the remains of that noble aqueduct which carried the water to Carthage over several high mountains the length of forty miles. There are still many arches entire. We spent two hours viewing it with great attention; and Mr. Wortley assured me that of Rome is very much inferior to it. The stones are of a prodigious size, and yet all polished, and so exactly fitted to each other, that very little cement has been made use of to join them. Yet they may probably stand a thousand years longer, if art is not made use of to pull them down. Soon after daybreak I arrived at Tunis. . . .

I went very early yesterday morning (after one night's repose) to see the ruins of Carthage. I was, however, half broiled in the sun, and overjoyed to be led into one of the subterranean apartments which they called *The Stables of the Elephants*, but which I cannot believe were ever designed for that use. I found in them many broken pieces of columns of fine marble, and some of porphyry. I cannot think any body would take the insignificant pains of carrying them thither, and I cannot imagine such fine pillars were designed for the use of stables. I am apt to believe they were summer apartments under their palaces, which the heat of the climate rendered necessary. They are now used as granaries by the country-people. . . .

When I was a little refreshed by rest, and some milk and exquisite fruit they brought me, I went up the little hill where once stood the castle of Byrsa; and from thence I had a distinct view of the situation of the famous city of Carthage, which stood on an isthmus, the sea coming on each side of it. It is now a marshy ground on one side, where there are salt ponds. Strabo calls Carthage forty miles in circumference. There are now no remains of it but what I have described; and the history of it is too well known to want my abridgment of it."

Although the learned abbé who was correspondent to the lively Lady Mary may have known all about the history of Carthage too well to have needed any further particulars from her pen, there may be some among our readers to whom a few historical notes in connection with our present subject may not be unacceptable. We have to go back nearly a thousand years before Christ, to the time when Dido, "granddaughter to the famous (or infamous) Jezebel," came from Phœnician Tyre, and purchased from the native inhabitants "only so much land as an ox's hide would compass," which hide she forthwith acutely cut into strips. Here she built a citadel called Byrsa. It is quite immaterial that this tale is generally "exploded by the learned." For the rest, Dido's unhappy love-affair with Eneas, and her

suicide upon the funeral pyre, are very old stories. Many of our readers will remember the anecdote of Porson, who, when some one defied him to make poetry out of the Latin gerunds, replied quick as thought,

"When Dido found Eneas would not come,
She wept in silence, and was *Di, Do, Dum.*"

To come to a more authentic class of facts. The English traveller who sails into that lovely bay, girded by its quaint mountains, where now reigns a deep and desolate silence, will not forget that here rose and flourished and decayed the *greatest maritime nation of antiquity*. It is enough to make him accept Macaulay's famous prophecy of the New Zealander gazing at St. Paul's from the ruins of London Bridge, when he remembers that here was once all the bustling life of a thronged seaport, "lined with large quays, in which were distinct receptacles for securing and sheltering from the weather 220 vessels. The city had high walls and splendid temples, "and all kinds of accommodation for the sea men." It had its Bermondsey and Blackwall, its huge St. Catherine's Docks, and doubtless, too, its Greenwich Hospital; magazines and storehouses containing all necessities for the arming and equipping of fleets; and near the old port was a temple of Apollo, with a statue of the god in massive gold. At the beginning of the Punic War the city had 700,000 inhabitants. Livy says it was twenty-three miles round; and as I looked over the plain from an eminence, I seemed to see no end of the ruin.

"Aristotle speaks of dinners given by various societies, probably like our clubs, in which political questions were discussed." And lo, politics and clubs and club-goers are mingled alike with the grass of the field; and only Mr. Davis, digging away at the stricken roots of Carthage, may hear, if he listens rightly, the sobbing sigh of past greatness, like that of fabled Mandragore.

Mr. W. Torrens McCullagh, in his *Industrial History of Free Nations*, says:

"The earliest commercial treaty whereof any memorial has been preserved was one between the Carthaginians and Etruscans. When as yet Mount Anentine was a wolf-walk, and in the clefts of the Tarpeian rock eagles of but inarticulate and undisciplined rapacity had as yet brought forth their young, the Etruscans were the most influential race in Italy. They are linked to the Carthaginians by the bonds of reciprocal traffic; the exports and imports between them are carefully regulated by treaties; courts of justice are jointly established, where the citizens of one state may sue for redress of injuries inflicted by those of another. (Vide Aristotle.)"

Among the Greeks too: "Many Greeks traded to Carthage, and the Punic merchant is spoken of in comedy as one of a class familiarly known at Athens."

But there is a special interest attaching to this deserted plain in English eyes. From hence sailed the bold traders who bought our Cornwall tin, and then tried hard to keep the mines a secret from all the rest of the mercantile world. So amiable were the Phœnician cousins of Carthage, that though they knew more about the Mediterranean than any other people, and had explored far beyond the Gates of Hercules,—usually held to be "the terminus of human adventure and aspiration,"—Mr. Grote informs us that "their jealous commercial spirit induced them to conceal their track, to give information designedly false respecting dangers and difficulties, and even to drown any commercial rivals when they could do so with safety."(!) Strabo relates that a Phœnician captain, returning from Britain, was pursued by a Roman galley, and ran his own vessel on the rocks that the Roman might be tempted into the same destruction; and he did this that the enemy might not discover where he had been and what was his cargo—British tin. This metal is supposed to have been also found in the Scilly Isles, then called *Cassiterides*. Heeren says that the ore dug up on the mainland "was carried to the small islands lying off the Land's End, accessible to waggons at the time of ebb-tide."

What all this tin was wanted for is not so clear; but "the

Phœnicians were celebrated for their skill in the art of dyeing; and the Tyrian purple, which was either a bright crimson or a scarlet, was held in the highest estimation. Hence it has been conjectured, with much probability, that the Phœnicians were acquainted with the use of the solution of tin in the preparation of that colour." Their mirrors were also made of copper and tin mingled together.

In Mr. Grote's *History of Greece* are many picturesque and interesting allusions to Carthage and her parent. He says, vol. iii. p. 366, "The Greek word Phœnicians being used to signify as well the inhabitants of Carthage as those of Tyre and Sidon, it is not easy to distinguish what belongs to each of them;" but from the coast of Palestine to the coast of Cornwall there was no merchant-ship to buy or sell goods except these Phœnicians. The relations between mother and child were ever amicable, so far as they have come to our knowledge. At her period of highest glory Carthage sent messengers with a sacred tribute to Hercules of Tyre during the siege of the latter town by Alexander the Great; and the women and children were sent from the beleaguered city to the protecting care of the colony, who thus repaid a debt of two centuries' standing; for when Cambyses was bent on conquering Carthage the Tyrians refused their fleet.

Sign of harbour there is none upon this desolate shore at the present day, and the contour of the coast is somewhat altered; but from the elevated site of a Tunisian fort close to the sea are still to be seen, ineffaceably stamped upon the hillside, the broad lines of an ancient flight of steps. Overgrown with grass and flowers, they yet retain a grand architectural semblance, and nothing which I saw at Carthage struck me with so profound a sense of forlorn contrast. These steps, what were they? Did they lead up to a temple of Apollo, with its god of massive gold; or down to the quay, thronged with the bustling feet of many nations? And how comes it that their ghostly outlines yet remain, when city and seaport are utterly vanished? Is it that in the warm, blue, starry midnights of the African shore mysterious processions yet file upwards and downwards, and wandering over the grassy plain, and by the murmuring tideless Mediterranean, recall with mournful wonder those fateful words, *DELENTA EST CARTHAGO*?

THE SHEPHERD BOY.

By SIR JOSHUA REYNOLDS.

HERE is an engraving of the famous "Shepherd Boy," by Sir Joshua Reynolds, which so many critics consider to be his *chef-d'œuvre*, and which certainly contains most of the characteristic merits of the painter's style, and perhaps less of those peculiar affectations so popular in the modish taste of his day,—

"In tea-cup times of hood and hoop,
And while the patch was worn;"—

times which were not even sincere in their feeling for such fopperies, but only wished to be thought so, and therefore merely succeeded in persuading themselves into a thoroughly artificial manner of thinking, and into not half believing their own words.

The breadth of Sir Joshua's style is most noticeable here, united with much sweetness of expression and grace, well meant for naturalness and rusticity. The reader will perceive that this is no genuine Shepherd Boy, any more than the high-bred dog which follows the pipe is the rough and weather-beaten guardian of a flock. The whole work is a pretty pastoral, and as such we may be thankful for it; only regretting that so much talent and sweetness of feeling was not supported, or rather directed, by a deeper confidence in nature, which would have shown the great artist how infinitely fresher and more delightful was its simplicity than were the graces and drawing-room airs of his own day. We are, however, parts of our times: had Reynolds lived now,

THE SHEPHERD BOY. BY SIR JOSHUA REYNOLDS.

we should probably have found him as uncompromising a realist as any of the present day. In some sense, he may be said to have been the first-born son of English art, from whom, if not from Hogarth, all the honours and glories which now distinguish her have descended; and the more frequently his works are examined, the higher will be the admiration he will receive. Some such Hercules was doubtless needed to clear away the *cliquanterie* which more than one age of trifling and insincerity had gathered about the art.

L. L.

THE LITTLE BLACK BOX.

A STORY OF THE SHAFTESBURY PLOT.

By G. W. THORNBURY, AUTHOR OF "ART AND NATURE."

CHAPTER IV.

THE HOT LUNCHEON.

SIR Robert would have served as cup-bearer, but the king insisted on his taking his usual seat at the table; while he himself sat beside Mabel, who, with many blushes, had been introduced to his majesty.

"'Tis a good wench," said Sir Robert, fondly pinching her arm; "better daughter than her old father deserves; and though she knows few of the modish airs, can play 'Selonger's Round' indifferent well on the old spinet, ay, that can she."

"As beautiful and virtuous as her father is honest and brave, I venture to swear," said Charles, with an admiring smile that won Sir Robert's heart.

In five minutes more Sir Robert was stirring round his wine with a sprig of rosemary.

"Is the day fixed for my brother Tony's coronation?"

said Charles, breaking suddenly into the conversation that at the other end of the table was now swelling into a loud murmur. "Has Little Sincerity been measured for his crown, or will the old one he had made for Poland serve his turn?"

"I have not heard, your majesty," said Godolphin; "but I met the old mole on the road to-day, at the head of the Green Ribbons, all lettered 'No slavery, no Popery,' and shouting, I'll wager a crown, as if they were going to fling down the walls of a new Jericho."

"And yet, odsfish, if Tony hasn't more divinity than all my bishops, and more law than all my lawyers. No one sees quicker into a heart than Cooper, yet he must needs use the stirrups of religion to get up into the saddle of power. Killigrow says he is now devoting himself to prove that I am engaged with the Jesuits of St. Omer in a plan to cut my own throat."

"How well old Hudibras sketches him!" said Sir Robert, pouring some syrup of gilly-flowers into his sack:

"'Mong these there was a politician,
With more heads than a beast in vision;
So politic as if one eye
Upon the other were a spy.'"

"Have you heard of the last joke of the Tory wits at the Rose?" said Godolphin.

"No, nor of their first either," said Charles; "but what is it? Nothing more of drubbing poor Dryden in Rose Alley, or acting D'Urfey's terrible duel with Mr. Bell at Epsom, when they fought for one hour by the clock at the Wells as to whether a note in the last Gavotte was B flat or G sharp, and ending with one of the combatants receiving a cut on the lute-finger, giving him such exquisite torture that he fainted."

"Better than that. To commemorate Shaftesbury's

dropsy, they have dubbed him Count Tapaki, a Polish title adopted by him when he missed the Polish crown; his emblem with them is a tap, and they drink their wine out of a silver urn with a tap accordingly.

"May that urn be a type of his funeral urn being nearly ready," said Essex bitterly.

"Nay, nay," said Charles, "I wish Tony no hurt. He is as agreeable a companion as ever helped one to kill an hour. I like Little Sincerity as well as many better subjects. Odsfish, it makes me laugh to hear James talk of his plots to cut me off at Hampton, or surprise me at Newmarket; and then the next day to see Tony hobble in, with an air of eternal friendship on his brow, and a gentle smile on his mouth."

At this moment the conversation was interrupted by Fido, the king's pet spaniel, who having been for a long time tugging at the long lash of Sir Robert's whip that hung invitingly from the mantelpiece, had at last succeeded in pulling it down, together with an old copy of Foxe's Martyrs, three tobacco-pipes, and a hat full of pheasant's eggs; then snapped at Roger, and ran between his royal master's legs, where he barked, half-frightened, half in defiance.

"He has done no hurt, your majesty; only a few birds the less; and the old book there, I only use to keep my May-flies in; I'm getting too old to fish."

At this moment Roger, who, from behind his master's chair, had kept his eye during the whole of dinner fixedly on the king, suddenly broke out into a sort of crying laugh, and cried, "I beg your majesty's pardon for the liberty, but your blessed face is so like your father's, of immortal memory."

"I forgive you, Roger," said Charles, with a smile, pulling down his wig; "but I'm sorry to find you already tainted by court-flattery. I'm universally known to be the ugliest dog in the three kingdoms, ay, and clap the colonies into the lot. But, Sir Robert, you seem uneasy; do not let me disturb your daily habits. Do you go to bowls after dinner, or do you take the tobacco?"

"If you please, your majesty," said Roger, "and begging pardon for the liberty, as an old soldier, and one who won the colours at Edgehill"—(Sir Robert was all this time making deprecatory signs, and frowning terribly)—"but my master, for twenty years, whenever the pudding is brought in, has been accustomed to sing, 'My part lies therein-a.'"

"Well, your majesty, it's no use denying it; but in your presence I would not—"

"Pish, Sir Robert! Clap into it as you love your sovereign, and perhaps I will give you a song of my own writing afterwards, if Baptiste has brought his French lute. Now, man, no coughing and clearing of the throat, but roundly, as if it was a view-halloo."

"Your majesty, it's nothing but an old thing not worth the hearing."

"Now don't be coy, Sir Robert; and mine's only a new thing, not worth the hearing. Silence, gentlemen, for Sir Robert's song, and none of your critical carwatches."

Thus encouraged, Sir Robert pushed back his plate and knife and fork as if they were in the way of his voice; took the cover off his London pudding, which Roger had brought in to give him inspiration; folded his hands on his sturdy chest, half shut his eyes, and sang in a clear lusty voice the following trifle:

"There is a pudding by the fire,
And my part lies therein-a;
The lads in the hall, go call them all,
And bring them all within-a."

Loud applause followed this quaint ditty, upon which Sir Robert bowed, turned red, drank a full bumper of claret to hide his confusion, and then, as if able to eat after the observance of his usual habit, fell to on his plate.

"Sir Robert, a slice of yours. It must be a good pudding that produced so good an air. Mine is but a poor lackadaisical thing. I wrote it in an old avenue at Buda, where I used to walk and think of England, and wonder how I should pay for my next new clothes."

"O no more of that, an't please your majesty. That raises the waters," said the good old baronet, whose sympathies two bottles of claret had helped to elicit.

"Baptiste, the lute, *Merci*. Here's the song. You all know it," he said, turning to his courtiers, "as well as my Worcester stories; but you'll pardon the fondness of a father." Charles, then standing up, and putting one foot on the red cushion of his chair, sang to the accompaniment of a lute, which he played with considerable skill, the following song in a rather hoarse but powerful voice:

"I pass all my hours in a shady old grove,
But I live not the day when I see not my love;
I survey every walk now my Phillis is gone,
And sigh when I think we were there all alone.
O then, 'tis I think that I think there's no spell
Like loving too well."

But each shade and each conscious bower that I find,
Where I once have been happy, and she has been kind;
I see the print left of her shape in the green,
And imagine the pleasure may yet come again.
O then 'tis I think that no joys are above
The pleasures of love."

But adooaks," said Charles, as he finished his song, and threw his lute with a careless air to his attendant, "love is not what it used to be in our young days: then lovers broke their necks in the tiltyard to show their constancy."

"And now they do it in fox-hunting," said Godolphin. "Once they used to show the strength of their limbs, now they show the strength of their heads. They ride like mill-horses round the Ring in the Park, till they get as dusty as a miller's man, and then spend half the night in drinking Burgundy to wash the dust out of their throats."

As Charles had time to reply, a thunder of horses' feet muffled by the turf, but ringing out louder at intervals, was heard; it grew deeper and clearer, till the rattle of swords and scabbards against metal-bound saddles or jingling stirrups could be heard mingled with shouts of command; and the next moment a troop of fifty Life Guards, headed by Claverhouse, dashed—the men red-faced and the horses covered with foam—into the courtyard.

"Egad," said Sir Robert, starting up and slapping his thigh with delight, "it does me good to see the willing hearts there are in the land to sweep away the Green Ribbons."

In a moment Claverhouse entered, and addressing the king, assured him that the appearance of the mob that was then passing rendered it necessary for his majesty to arm; and at the stamp of his foot, three pages entered carrying a helmet and breast and back piece.

Charles gave a groan at the sight of these, threw himself back in his chair, filled up his glass, and yawned; got up, stretching his arms and looking in the glass, while he stood bareheaded without his wig, and put on his helmet,—a curious contrast to his other dress.

"Egad," he cried, "I sometimes wish I could shut up Whitehall for the summer-months, pawn my crown to old Metrolle the goldsmith at Temple Bar, ship my twenty-four fiddlers that D'Urfey made the song about, and sail off with Nelly to some snug little island out of reach of the cry of 'No Popery' and the jingle of Bow bells. Chaffinch should be my cook, and Bay May my groom."

"Theatres and tennis-courts and pall-malls are rare in desert islands, and the exchequer of such delectable places is generally rather scanty," said Godolphin, as he helped to buckle on his monarch's sword. "A king would be very happy without subjects; but unfortunately where there are no subjects there is no one to pay taxes."

"Well, thank God," said Charles, "Monmouth's away, dancing at country-fairs for the sake of Protestantism somewhere in Somersetshire; and James and that blustering Lauderdale are busy hanging in Scotland. They are all better out of the way when London comes to Oxford."

"Killigrew was right," whispered Godolphin to Arlington, "when he said Charles could see if he would, and James

would see if he could. There are the materials here for something better than a Whitehall *soirée*."

Ere Charles had done arming, Roger, who was also a skilful gardener, and proud of his skill, came in, and with a scrape of his leg and an awkward bow, begged his majesty would allow him to put in the royal carriage a basket of pearnains and jennetings from the home-garden.

"Another day such as this," said Charles, with a good-humoured laugh, as he threw himself back in his chair, stretched out his legs as if they were still cramped by the confinement of the coach, first looking at his shoe-buckles, then readjusting his blue ribbon of the Garter, and lastly, passing his fingers through the scented curls of his black wig, "and Tony will lose half his subjects. How many a fat alderman to-day from Portsoken or Bishopsgate has endured martyrdom on a hard-trotting horse! Odsfish, Arlington, how the portly feeders must have shuddered at the thought of such a ride, and consoled themselves by the thought of all the bonfires of Smithfield and the 'blessed cause'!"

"Upon my life, your majesty," said Hyde, "it's too bad to saddle the Papists as they do. If a fellow is knocked down at Hammersmith and loses his silver-hilted sword, the highwayman is always a concealed Papist; if a man reels into the gutter on his way home from his club, and a link-boy picks his pocket, it's a Papist; if I go into a tavern, and won't pay my host's exorbitant bill, he mobs me with all the drawers, and dubs me 'Papist;' if I cane a bully in Spring Gardens for treading on my toes, he shouts 'Papist!' and I'm driven out and treated worse than a bailiff in Whitefriars."

"Egad," said Charles, laughing at Hyde's Tory indignation, "I take these things philosophically, and laugh at them in my sleeves; but, faith, the people are moonstruck, I think. There's Nell told me this morning that the people round the theatre yesterday were crying, 'Protestant pears,' and 'Hot Protestant pudding.'"

"Your majesty is too good-natured with the *canaille*," said Hyde fiercely. "This earl of theirs will be turning '81 into '41, and Aldersgate into Whitehall. We shall have yet to trample them under our horses' feet, and pull down that den of sedition where the old traitor sits all day and night fanning the coals of rebellion."

"Why you're another Rupert, Rochester," said Godolphin, with a good-humoured smile, helping himself as he spoke to a favourite dish near him, and then holding up his glass to the light with all the gusto of a connoisseur. "We shall have you heading the Life Guards in the battle of Moorfields."

"And the great siege of Thanet House," said Charles.

"Defeating the allied forces of Little Britain and Shoreditch," echoed Arlington, with his usual stiff deliberation.

"We shall have Buckingham introducing you as one of the kings of Brentford, with an army of three bandy-legged drummers and a knock-kneed pikeman."

"If your majesty choose to turn every thing into a jest, well! You chased a moth all the night your fleet was burning, just as Nero fiddled when Rome was blazing."

"I know the taunt," said Charles; "I've read it twenty times in the Protestant newspapers. Go on: Finch is not here to indict you for treason."

"Your majesty must pardon my natural vehemence."

"His majesty is too accustomed to such vehemence to be the least disturbed. Besides, after court compliments, it is quite stimulating. Go on. It's like hearing a trumpet sound a point of war after listening to Torcelli's lute, or that siren Davis a-trilling of French airs."

"It troubles me to see your majesty bear so patiently the factious workings of these turbulent spirits,—these knaves who under their Geneva gowns carry the assassin's knife and the headsman's axe. Methinks, when I mount the peak of history, and look upon the past and future like two oceans, I behold this glory of all islands, this mistress of

four seas, a prey to the flames of civil war and the whirlwind of rebellion."

"I see—why you're all in the heroic vein to-day, Essex," said Charles wearily; "but cannot you keep this eloquence for the council-chamber to-morrow, and not weary me and Sir Robert, who will certainly think me a strange uncivil guest for thus shutting him from our conversation?"

"Will you not, sire," said Hyde passionately, after a moment's musing, "remember that those whose hands were dipped in the most innocent blood of that illustrious martyr—?"

"O now, I can't stand that old clap-trap; odsfish, man, I can't stand that," said Charles motioning. "Is a man's father of no use but to reproach his son with? Only the other day, at my last levee, Bishop Fell had the impudence to tell me I swore more than became a good Christian; and I said to him, 'Your martyr swore worse than that.'"

"The king of blessed memory," said Sir Robert, rather shocked at the levity with which the thoughtless monarch spoke of his royal father, "was not sparing of adjurations when he was directing a charge, or riding down the squadrons; for I remember, at Newbury, when we had to jumble in a heap over a low wall to get at some cursed musketeers that galled our flank, his majesty, in my hearing, called out lustily, 'A pest on those fellows, they are shooting us down as if we were young crows!'"

"That's nothing. In Noll's times," said Godolphin, "when the Parliament put fines on swearing, it is said to have cost that young Hector Bellasis a thousand a-year for oaths alone; but 'pest' counts for nothing."

"I'm afraid we're growing effeminate," said Charles, "in oaths. Look at Queen Bess, that the *Weekly Discovery* is always talking about; she swore by God's wounds, and such grand Popish oaths; but now our ladies lisp out, 'Upon my honour,' a foolish oath; and 'Upon my reputation,' a venial oath. To return to Rochester; what has made him turn a Wentworth all at once?"

"I wager he was scared by the Green Ribbons, or the 'prentices hissed him the last time he went into the City," said Sunderland sarcastically.

"James is fonder of hunting than I am," said Charles; "I prefer the paradise at Hampton Court, and chasing about my gardens after a rabbit with my spaniels. Odsfish, if gentlemen like you, Sir Robert, wouldn't rather have hares than friends, and would forswear any king who dared to hunt on your land. Egad, if I have ever liked the sport since I was hunted so myself after Worcester. When we were last at Newmarket, James and I went out every day; and every day, at a certain place, we met an honest fellow of a butcher, who, from my speaking to him, got in a habit of asking what sport we had. If we said we'd had a good run, he always said, 'Did you kill?' and if we said, 'No,' he put his fingers to his nose, and jogged off. Odsfish, at last, if I didn't get ashamed of looking the fellow in the face."

"I was once riding with the Duke of York," said Arlington, "near Windsor, when we were warned off an enclosure by a gentleman in a greasy buff coat. 'Do you know who you have, sir?' said his grace. 'Yes,' said our friend; 'I am speaking to a duke; but on my own property I am king.' His grace grew black, and was much troubled at this; and I think but for me would have sent back, and have had the dogged fellow's nose slit."

"If I had been there," said Charles, "I should have laughed, and bowed, and said, 'Sir, you make me feel I am the greatest prince on earth; for while others rule over slaves, I rule over a race of kings.' He'd have been a Tory ever afterwards."

"I think Sir Robert beats all fox-hunters I ever met with," said Sunderland, "but old Matchem of Leicester, who rode twenty stone, and his huntsman eighteen; he got drunk every day to the toast of all the hunters in Christendom; and once, after a hard day, when he went home with two brushes in his hat, had the fox's head devilled for dinner."

"Ah, ah! and better too than your foreign kickshaws," said Sir Robert, looking hard out of window to prevent his eye glancing at his majesty's plate.

"Is that a good dog of yours?" said Charles, pointing to a foxhound that was muzzling his nose with his master's hand.

"Never a better, your majesty, ever gave tongue. Stout and tender-nosed, and no babbler; stanch and true, swift and keen; one that has tasted fox before this. With your majesty's leave, I'll propose his health. 'Grappler's Health, with three times three.'"

With demure faces the company filled their glasses, and drank the toast.

"Gentlemen," said the king, "I have now to propose a toast which I am sure will be drunk with enthusiasm: 'The Little Whig.'" Sir Robert, not seeing the allusion to Sunderland's beautiful wife, tossed off his glass with a look of inquiry.

"I never heard of that dog," said Sir Robert, "your majesty; there was Whigger, by Glider out of Blossom, well known in this part of England."

"It's a well-known toast," said his majesty, "but not confined to sportsmen."

"Ah," said Sir Robert, "save your majesty, I see them all abreast, carrying a lead, never coming to a fault, spreading like a sky-rocket, twenty-five couple all in a clump. Then push forward all of yo; scream, yelp, bark—such music! Halloo, forward! gone away! Tally-ho! he gets a head; they're gaining him!"

"Heigh, Baffler, Buxom, Bounder! So ho, Conqueror, Chimera, Crasher! Ho, Forester, Flasher, Jester!"

"Heigh, Traveller, Racer, Reveller!" said Godolphin, led away by the enthusiasm.

"Tally-ho, tally-ho! tear him to pieces," said Sir Robert, throwing up his arms as if flinging the dead fox to a mad-dened pack, and then sinking quite relaxed into his chair, with a stammered apology to his majesty.

"No words about it, Sir Robert. I love an honest sportsman, and I know Godolphin's taste of old. But isn't this much better than the field? here's all the excitement and no fatigue. And how long did that chase take?"

"Let me see," said Godolphin, smiling and looking at his watch, wiping off the heat-drops from his good-humoured forehead; "by this stop-watch, exactly one hour and twenty minutes. We went away with a dog-fox, stuck to him down Wetherby Hill, had a check at Guymassy Woods, tried back at Wollerton, were thrown out at Clanson Earths, and killed at last at Winnesly Bottom, after a twenty-mile run."

"The fox is sagacious, and of much discernment," said Arlington inquiringly; "but still a very loathsome vermin, and not worth the catching."

"As to its smell, I prefer it to wig-powder, or ladies' sweet-washed gloves, on a clear morning," said Sir Robert. "As to sagacity, I should like to hear any one, saving his majesty, match this story of mine. When I was with Lunsford's regiment in Essex, in 1643, we went three days running to Cricksell Wood, and always lost in the churchyard. We were all at fault, stumbling about among the graves, when a celebrated bitch, Fidget, leaped up several times at a buttress and gave tongue. Some thought nothing of this; but trusting to her stanchness,—for she was my favourite,—I leaped off my horse, and climbed up by some ivy to the low roof of the church, where we found a kennel sure enough. We helped three or four couple of dogs up, and sounds, they went in full cry on the chancel-roof in a moment; and there Reynard died without benefit of clergy, after a five minutes' run."

"Extraordinary," shouted all.

"I know another old fox," said Charles aside to Arlington, "who generally uses the Protestant Church as a place of refuge."

"I never heard of another," said Sir Robert, in high glee at the interest the royal party took in his sporting stories.

"You mean, Sir Henry Woollet; at the Gable House at Chesham."

"Yes, yes," cried every one, to get the quicker to the story; "well?"

"I was hunting there once, when we ran the fox up into a tree; and there, twenty feet up, we found a hole with four cubs. Egad," said Sir Robert, "I don't know if a kingdom is not easier to manage than a pack of fox-hounds; and some of our rules might, mayhap, be of use to your counselor-gentlemen here. Hit your dog first, and rate him afterwards, for instance."

"Lauderdale does both," said Charles; "for he scolds a poor devil of a Covenanter and then hangs him."

"Silent at going into cover, noisy at coming out, is the huntsman's business."

"As men who are quiet in office are noisy in opposition," said Godolphin.

Sir Robert looking rather puzzled at these allusions, Charles good-humouredly asked him, "What are the requisites of a good foxhound?"

"Legs like arrows," said Sir Robert; "wide breast, your majesty, and deep chest; broad back, thin neck, small head, and thick tail."

"I remember some old distiches about a greyhound," said Godolphin:

"Head like a snake,
Neck like a drake;
Back like a bream,
Side like a beam;
Tail like a rat,
Foot like a cat."

"True enough, true enough, sir," said Sir Robert, approvingly, looking round benignantly, and filling his glass "to the immortal memory."

"And what are the best sort of mornings for your fox hunting?" said Arlington sedately.

"The scent lies, look you, when the wind's southerly or westerly; north and east are what I call Whiggish winds, good for nothing but to save foxes' brushes, weary the dogs, and send the huntsman swearing like a trooper; a warm day without sun, a hot close fog, and when there's a white frost, hard rain, and mild air, are good. But of all things in the world, there's nothing spoils an honest man's sport more than your cursed stinking violets. Drat me, if I don't hate the sight of them."

"Ah, ah!" said Charles, bursting into a laugh at this odd antipathy. "Why, you're like my old huntsman at Windsor, who goes about the park wishing all the sheep were foxes; and well he may, for I pay him 80*l.* a-year for nothing but hallooing."

"As well earned as a lawyer's money," said Sir Robert; "and I wager a very honest fellow, and one I should like to crush a pot with."

"All I wonder is," said Arlington, "that a man ever hunts twice—running, like a madman, after a bad smell, just to feed a set of dogs, who are the only creatures that relish the sport."

"Out upon you," said Godolphin. "Sir Robert's right. The finest moment in life is when the first challenge is heard in the dark of the cover, 'Hark to Chirper! bark to Rattler!' as the dog speaks in the thicket, and owns the fox."

Charles rose to go; but Sir Robert, who by this time had taken far too much claret, held the king's hand, and dragged him back to his seat, entreating him, with tears and many allusions to "the blessed memory," to finish the bottle.

With a good-humoured smile, the king released his coat from the good knight's grasp, and whispering, "A drunken man is as great as a king," sat down and completed his task, much to the indignation of Essex, and the delight of the pliant Godolphin.

With a discharge of patareros from the roof of the clock-tower, the cavalcade set forth, the king riding at their head fully armed, to express his apprehension at the armed followers of Shaftesbury.

"Honest old fellow," said the king, "as I ever saw; full of old Cavalier stories that would delight Rupert, and as fond of fox-hunting as his servant is of gardening."

"What in the world took Rowley to that dreary old house?" whispered Churchill to Claverhouse.

"A pretty face, as usual," said Claverhouse; "and he talks of sending for her to court, so let Portsmouth tremble."

"Bah," said Churchill, "what fear from the red cheeks of a village Cicely? Take canary, and rinse your brain clear. A fiend when seen through a rainbow-cloud by lovers seems an angel."

"Yes," said Claverhouse,—"there, don't shrug and bite your glove,—but to the vulgar herd only an imperious wanton Jezabel."

"What's that about Jezabel, gentlemen?" said the king, turning round. "Churchill hasn't turned Quaker, I hope, to win favour with the duke. As for Claverhouse, he never turns, except he turns colour when he's angry, and that's too often."

"Have you heard Tony's last trick, your majesty?" said Godolphin, as the royal party rode on.

"Not I," said Charles, whistling a song of Dryden's.

"Why, Tony declares an agent of his in France has discovered in a convent at Paris a little black box, containing the deed of marriage of a gentleman named Stuart with a Welsh girl named Walters. It's now on its way over."

"A little black box," said Charles, laughing. "What next? And so Monmouth turns out James, and gives the empty box as a money-chest to Shaftesbury, who keeps the Exchequer under his own key. A little black box, ah, ah! Very good! A little black box! Ancora. Very well, very well indeed."

PROGRESS OF SCIENCE.

THE great scientific event of the month has been the meeting of the British Association at Dublin; and it is matter for congratulation that its twenty-seventh annual session has been one of the most successful it has held. The Rev. Humphrey Lloyd was the president; and his inaugural address, notwithstanding his apology for the restricted notice he was able to give to general science, contains a pretty complete exposition of the scientific progress of the past year. Commencing with astronomy, he drew attention to the continued discovery of new asteroids. In 1852 no fewer than eight were discovered, and last year five; during the present year three others have been added to the list,—one discovered by Mr. Pogson, of Oxford, the other two by M. Goldschmidt, of Paris,—making the whole number now forty-five. Notwithstanding their number, the total mass of these forty-five worlds is very small; the diameter of the largest being less than forty miles, and that of the smallest little more than four. Adverting to the aid which star-catalogues had lent to these discoveries, the president directed attention to the startling fact, that no fewer than seventy-seven stars previously catalogued are now missing. This is no doubt to be attributed partly to errors; but there still appears reason to believe that many members of the sidereal system have become, and are becoming, extinct. Though the greater part of celestial phenomena are explicable according to the same laws of gravitation which govern the planetary motions, yet the operation of other forces is suspected, the laws of which may remain long undetermined. The spiriform nebulae discovered by Lord Rosse are phenomena without an analogue in our own system; they have been accounted for by the assumption of the compound agency of a gravitating force and a resisting medium; the latter being assumed to have a smaller proportion to gravitation. As an illustration of the practical value of apparently recondite facts, the president noticed the seemingly convincing argument of Arago, that the sun is not an incandescent solid, but surrounded by a luminous atmosphere, because light from incandescent solid bodies can be polarised by refraction, whereas solar light, and

heat emitted by gaseous bodies, is unpolarised by similar means. Adverting to researches bearing upon the figure of the earth and the tides, the president mentioned some results of the Ordnance survey of Great Britain which had been communicated to the Royal Society by Colonel James, superintendent of the survey. The ellipticity deduced is $\frac{1}{298}$; the mean specific gravity, as obtained from the attraction of Arthur's Seat, near Edinburgh, is 5.316. Magnetic storms was the next subject, and the remarkable connection of these phenomena with mutation of solar spots was pointed out. One important deduction which a study of these phenomena leads to is, that the periodic changes of the earth's magnetic force, usually referred to thermic effects of the sun wholly, can for the future be referred to that agency only in part. Passing from astronomy and magnetism to the kindred subject of light, the most important recent fact to be noted is that recently made out by M. Jamin, that no distinction can be drawn, in respect of polarisation by reflection, between transparent and opaque bodies; as all bodies transform plane polarised light into elliptically polarised light, and impress a change of phase at the moment of reflection. As regards the photographic application of light,—or rather the heliographic power, whatever it may be, associated with light,—the president prominently referred to the production by M. Poitevin of plates in relief, for engraving purposes, by the action of light alone. Our readers will have already seen an abstract of this process in one of our previous scientific articles. The philosophy of the correlation of physical forces, and the mutual equivalents of power, was touched upon as its importance demands; and as a corollary, the point was not left unnoticed that recent discoveries have given the *coup-de-grace* to caloric as a special element. We need not follow the president in his remarks about aluminium, silicon, and boron,—tortured as they have been by such unrelenting inquirers as St. Claire Deville, and Wöhler,—our readers having been already made acquainted with the salient points of their discoveries.

Passing from science to the administration of scientific functions, the president adverted to the labours of the Parliamentary Committee of the Association; who, in reply to the question whether any measures could be adopted by Government that would improve the position of science, or its cultivation, in this country, recommend the providing at national cost of a central building in London, in which the principal scientific bodies may be located, and the formation of a scientific board to have the control of the public funds allotted to the advancement of science. Something in this direction has since been accomplished by the grant of Burlington House for the use of the Royal, Linnæan, and Chemical Societies; for which a *very* warm eulogy was passed upon the Government.

Even a slight abstract of the papers read in the various sections would occupy more space than we can devote to such subjects. To some extent we shall have to refer to them hereafter; but in many cases the points of interest have already been brought before our readers in preceding Numbers.

Perhaps there does not exist a scientific problem of greater general interest just now than the construction of submarine telegraphic cables. Lamenting, as one necessarily must, the temporary failure which has postponed for a time the establishment of telegraphic communication between these isles and America, it is nevertheless satisfactory to know that the failure has not been without its teaching; that with the introduction of a few obvious means of safety, suggested by misfortune, we may confidently look forward to ultimate success. Meanwhile it may be interesting to learn what intelligent foreigners think about the construction and capabilities of the cable. M. Baudoin, a gentleman who has had much to do with the telegraphic lines of France, has pronounced the structure of the cable to embody every principle which he is able to suggest. He considers the distribution of the metallic conductor into several parts, instead of restricting it to one, to be a peculiarly important

and though he regards the external wire-coating as a matter of superfluousness, not at all necessary except as a safeguard to the cable in case of its grinding upon a ridge of sharp rock or coral reef, yet he grants that practically it subserves the purpose indicated by an electrical theorist, M. Balestrini, of discharging such electricity as may linger by induction in the gutta-percha coating. M. Balestrini suggested the attachment of masses of light material to submarine cables at various parts of their length, just as paper slips are attached to the tail of a boy's kite, by which he thought the descent of the cable to great depths would be moderated, and the risk of breakage proportionately lessened. M. Baudoin shows the fallacy of this notion, though one in which he had been himself inclined formerly to put faith. He calls attention to the fact that at great depths below the surface of water all practical distinction between lightness and heaviness ceases; either the water gets forced into the pores of a body, or the particles of which the latter is composed are so pressed together and condensed that their floatative power is destroyed. This fact will be readily conceded when we remember that at a depth of 1100 mètres the pressure is equal to no less than 100 atmospheres. He believes that the sole provisions of safety against rupture of a submarine cable from its own weight must be imparted to the structure of the cable itself; and, with a segment of the Atlantic cable in his possession, states his conviction that it is in every way fitted for its purpose.

The French government has long had in contemplation the establishment of telegraphic communication between France and Algiers; but hitherto no contractor has been found willing to undertake the work on the terms offered, namely 50 centimes per mètre. According to M. Baudoin, if the expense can be reduced to 60 centimes per mètre, the French government may have reason to be well satisfied.

Mathematicians need not be reminded how necessary it is that logarithmic tables should be absolutely exact. To work with incorrect tables, is very much like trusting oneself to the casualties of an ocean voyage in a leaky vessel. A paper has been recently communicated to the Mathematical Department of the French Academy of Sciences by M. Dupuis on certain errors in the logarithmic tables of Callet. In these tables there is found at the end of each page logarithms marked S and T, with their variation V for 10 seconds. The logarithms S and T, which represent ratios, being added to the logarithms of the number of seconds of a small arc, the logarithms of the sines and tangent of that arc are obtained. Calculating the value of S and T to ten decimals, there is found to be an error in the seventh figure in certain parts of the latter. Of course it would be out of place to print the corrections here, but they may be found in the *Comptes Rendus*, vol. xlv.

Amongst the curiosities of modern manufacture, making artificial stone is not the least remarkable. At a first glance, few operations would seem more unpromising, few more unnecessary. Not only is stone almost every where found, but for the most part in abundance. Nevertheless, the fact of bricks being made in localities where stone is plentiful would seem to point to drawbacks or difficulties in its use. In our own country, we have had Mr. Ransome following a process of nature very closely, and manufacturing stone by gluing sand together (if we may use the word "gluing") by means of silica dissolved in caustic soda; we have also had the stone-like compound of aluminised plaster of Paris. The former is coming extensively into use, but the cost is a serious drawback to the latter. M. Felix Abate has lately published the particulars of a process for imparting a stone-like hardness to plaster of Paris; and he produces manufactured articles in it at a price scarcely greater than those made of ordinary plaster. He deposits the burnt plaster in a cylinder, into which he passes aqueous vapour to the full extent of the plaster to absorb. The plaster, which does not in this condition lose in the slightest degree its pulverulent form, is then packed into moulds and subjected to powerful pressure. The material thus finally

resulting is very compact and hard, and takes the polish of marble. Bas-reliefs of the most elaborate character may be fashioned out of it with all the fidelity of the original models. An experience of three years demonstrates the unchangeableness of the new substance under atmospheric influences.

Saccharine substances have been of late subjected to much chemical scrutiny; and, as we announced in a previous Number of our monthly abstract, mannite, sorbine, and glycerine were demonstrated to be fermentable with the production of alcohol when properly treated. A question of great interest to physiologists is, whether sugar be or be not ordinarily generated by the liver of animals, and whether it be or be not discoverable in the venous system more peculiarly belonging to the liver, i. e. the system of the *vena portæ*. In 1855, M. Figuier was the first to call attention to the presence of sugar in the *vena portæ*. Certain physiologists having turned their attention to the matter, subsequently denied the conclusions to which he had arrived; founding their denial on the fallacy that the substance termed sugar was not capable of fermentation. To this M. Figuier properly replied, a far surer test is the potassio-tartrate of copper. He moreover now states that the saccharine substance in question can be made to ferment by proper treatment. The most important point arrived at by him, however, is, that sugar is discoverable, not in the blood of the liver alone, but in blood from every part of the animal system; there seems, consequently, no further reason to assume that the liver is specially endowed with the sugar-generating function.

AUTUMN WORK IN THE FLOWER-GARDEN.

By this time the greenhouse-plants that were turned out for the summer will have done their work, and preparation must be made to house them for the winter. The glory of the year is fading fast, and one of the finest seasons we have had for many years is drawing to its close. Now the gardener must be on the alert, for there is plenty to do; and the beauty of the garden next year will depend very much on present vigilance and a steady watchfulness for a few months to come. For whatever is incapable of braving the winter unhurt quarters must now be prepared: pits cleaned out and dressed with a new coating of ashes; broken glass must be made good, though that and re-painting ought to have been done in July. The last act of preparation is to see that there is plenty of compost made up and sweetened, and enough new pots got in, and all the old ones well washed and set in order as to sizes. Slovenly ways in potting are sure to lead to mischief; and old pots should never be used again till they have been scrubbed inside and out and well aired; and every bit of drainage to be used in potting should be equally sweet, whether old pots or broken oyster-shells.

You will of course be anxious to preserve the gaiety of your beds and borders to the last moment; and if you have the necessary appliances of a few frames and a greenhouse, and a little heat at command, you may let things remain until the weather really begins to tell upon them, because a little careful nursing will soon set them right, and exposure to the last moment will enable the stock to winter with less protection. But it is better to be a day too soon than a day too late; and for those who are put to their wit's end to preserve things all the winter, the best rule is to take them up in good time, that they may have a little of the season left to make root after being shifted.

In taking up, geraniums claim the first notice, because in most places they are used more extensively than any other greenhouse-plants. There are two good reasons for preserving every good geranium, even if they are but common Tom Thumbs; first, because we prize that which we have to care for, and avoid the expense of re-purchasing; and secondly, because the older a geranium becomes, the more valuable is it, and the more hardy. Those who sacri-

tice their stock to the frost, and buy every year, can have no idea of the value of a good old geranium-stump, which is no sooner planted out than it breaks from every joint, and flowers freely on its well ripened wood; while young plants are wasting a good month in making long shoots and abundance of foliage. For these reasons, set a value on every geranium that has proved good in blooming, no matter what its name or its market-value.

In taking up geraniums you must vary your operations according to the treatment they are to have. If to be housed and brought into bloom early with a little fire-heat, give them a somewhat generous and light soil; if to be merely kept alive out of reach of frost, put them into the poorest stuff you can lay your hands on—such as the loam from some spot in the garden where you never remember to have put a spadeful of manure, and which has been cropped to death. This, with a moderate admixture of sand, will be the best stuff for all kinds of stock that are to be wintered under circumstances in any way trying to plants, and in it they will be much more hardy, because less excited to growth, than in a nourishing compost.

If you hope to have a good show of geraniums at Christmas, or thereabouts, take up as many of the young plants that were struck in July, and that have not yet flowered in the open ground, as appear promising. Pot them at once into their flowering-pots: 48's will generally be suitable, though, if the plants be small, 60's will be better. Some may be potted in 60's, so as to have a shift about November, to bloom very early in the spring; and any that show a bloom of the autumn growth must be nipped down a joint or two, to cause new shoots to break for blooming at the desired season.

The general stock of bedding geraniums must be taken up with care, and cut down to two or three close forks of the old stem, and in such a way that when the top bud of each joint shall break it will have an outward direction. If you cut them "anyhow," you may soon have the centre filled with weak spray, and the plants destitute of shape and symmetry. Cut pretty close, and so as to leave only two or three joints of this year's growth to each fork; for tall growing sorts, such as Unique, Commander, &c., cut very low down, so as to promote a strong growth out of the old wood, except for such as are to be grown as specimen-plants; and these must be judiciously cut with regard to the arrangement of the forks of the old stem, and the positions of all the joints upon them. Give every pot plenty of drainage,—say not less than one-fourth of its depth, to be made up of broken pots or oyster-shells, and over that some of the roughest of the compost, to prevent the fine soil washing down and stopping the passage.

The cuttings of geraniums may be sorted over, the best half-ripe joints picked out, the weak watery spray thrown away, and those reserved struck with a little bottom heat; though the strong growing sorts will root without, if put into shallow pans in powdered peat and silver-sand. Scarce and valuable sorts, and fancy-foliaged geraniums,—such as Attraction, Dandy, Flower of the Day, Mountain of Light, and others, that are never too plentiful,—should be very carefully cut up and struck, one joint in and one out; though a single joint will make a plant, if assisted with a little heat. You are of course aware that all pelargoniums and geraniums, except a few of the variegated-foliaged kinds, strike freely out of doors, in the full sun, from the first of June to the middle of August; the sorts used for bedding should always be struck in this way about the middle of July, and make better plants than any produced under glass. Geranium-cuttings should be kept rather dry than otherwise. It is a good rule for those who have but limited means of preserving tender plants through the winter not to strike a single fancy-foliaged geranium until the spring, for young plants of these kinds are very difficult to rear.

In potting other things, you must be guided very much by what stock you will want next year. Old plants of calceolarias are of comparatively little value, for, unless ger-

aniums, which improve with age, these deteriorate; therefore, where a very large number is not requisite, it is better to take off cuttings from the best plants, and throw the old stools away. In making the cuttings, choose short stubby side-shoots; trim off the lower leaves, and strike them in a cold pit, or under hand-glasses; for if they are giddled with artificial heat they get spindled and worthless. The best plants are those from autumn cuttings, struck without heat, and wintered in cool pits, with plenty of air at all times, except during severe frost. Sorts that are prized may be still further increased by cuttings, assisted with a little heat in spring; and from one or two of the old stools, now taken up and kept over winter, a very large stock of young plants may be manufactured in spring by nipping down the old stems and nursing them to throw side-shoots. Calceolarias like moisture and a little peat in the compost.

Ageratums, verbenas, heliotropes, and lobelias may all be treated in the same way. Save one good old plant of each sort, and from that manufacture young stock; though, if you have been on the alert, you have a goodly number struck already, for the ground is a natural hotbed from the middle of July to the end of August; and any thing that can be rooted may be rooted out of doors, with the help of shade and moisture, and a little sand about the cuttings; and the plants that have been pegged down will be found rooted at every joint. By sacrificing the greater portion of such things we get rid of the trouble of carrying them safe through the winter, which is often more than they are worth; and early in spring the few old plants that were saved will supply cuttings in abundance for propagation. Heliotropes, carefully potted, trimmed up, and grown on in the greenhouse, may be brought to a great size, and are prized by some folks when they grow to neat bushes; but for bedding purposes little miles of plants are best, if they are struck early and treated generously before being put out for the season. Those that are saved must be kept as nearly dry as possible in small pots, and with air night and day, except during frost. Fuchsias in pots must be cut back to good stems, and laid on their sides under the eage of the greenhouse till they begin to break. The old plants that have well-ripened wood will scarcely want a drop of water the whole of the winter; but young plants must have a sprinkling occasionally over the stems, and the soil moderately moistened when it gets powdery, but never so as to become wet. Hydrangeas are marsh plants, and like water; but when fairly at rest, they must be guarded against any excess.

SHIRLEY HIBBARD.

STICKLEBACKS AND THEIR "NESTS."

The common stickleback of our rivulets is a much more interesting member of the great fish family than careless observers might suppose. His strength, his courage, his capacity for enduring almost any degree of heat or cold, his ability to live either in salt or fresh water, and, lastly, the singular instinct which gifts him with the desire and power to construct a "nest" for the protection of his offspring, place him, notwithstanding his diminutive size, in the ranks of royalty among fishes.

The stickleback belongs to a class of fishes termed Acanthopterygii, from the dorsal and lateral defensive spines with which they are furnished. The generic term by which the special family Stickleback is distinguished is *Gasterosteus*, from the Greek word *gaster*, the stomach, and *osteon*, a bone, in allusion to the bony plates by which the sides of the stomach are defended. These little fish have also other popular names, which likewise refer to the plate armour with which their sides are defended, or their sharp, aggressive spine. These names are, Sharpin, Banstickle, Prickstick, &c. The different species are distinguished by the number of defensive plates, or bony spines. One small and one very large kind is the sea-spined stickleback (*E. pinnatus*);

while the most rare of the family, seldom, if ever, found in fresh water, is the fifteen-spined stickleback (*Gast. spinachia*). This last, however, will also, like his congeners, live in fresh water. He is, indeed, of aspect sufficiently distinct to account for his difference of habit, being formed almost like a very short eel, but stamped indisputably as a true stickleback by his spines, and other gasterostean characteristics, not omitting his nest-building faculty, in which he is nearly as distinguished an architect as his brethren of the brooks.

Among other interesting peculiarities of these little fish, is their chameleon-like power of assuming different colours under different influences. In the breeding season, or when agitated in the almost continual conflicts which they wage against each other, their usual dull green changes to the gayest hues of scarlet contrasted with milky white, the most vivid grass green with purple, and sometimes in combat becoming, in their most terrible anger, nearly jet-black. The vanquished, however, soon loses his bright hues, recovering a faint reflection of them at the moment of dissolution, as though in the delirium of his last agony he saw himself the victor instead of the vanquished. Placed in a tank with others of his own size, he never ceases to combat till he remains undisputed monarch of his domain; so that it is impossible to keep a number in the same vessel. A single pair, however, under fortunate circumstances, might exhibit the interesting spectacle of the construction of the nest.

Nest-architecture has been generally thought to be confined to birds; for the few quadrupeds which have been described as making nests,—such as the rabbit, the field-mouse, and the squirrel,—merely prepare beds for their young. The only true nests, therefore, except those of birds, are constructed by fishes; and yet, till M. Coste read his interesting paper on the "Nidification of Sticklebacks" the other day at the French Academy, modern naturalists knew nothing of this peculiarity in the habits of fishes, at least they published nothing; though Aristotle had stated above 2000 years ago that a certain little fish constructed a nest like that of a bird,—a statement that was either overlooked, discredited, or disregarded. Clive, it is true, among modern naturalists, stated that the black gobie deposited its spawn in a kind of nest; and this is now thought that this was the fish alluded to by Aristotle.

M. Coste was enabled by a long series of unwea-

ried observations to describe the whole process of construction of the stickleback's nest; and the following narrative, as subsequently detailed by Orbelin, is the result of his interesting discoveries.

At spawning-time the males—for they are the builders, the ladies remaining perfectly passive—may be seen busily engaged preparing for the erection of the family-nursery, evidently an arduous task for such miniature architects. Every bit of the material is carried in the tiny mouth, and often from considerable distances. His various contrivances to prevent the foundation of his structure from being carried away by the stream are exceedingly interesting; the most common being the deposit of a layer of sand on the lighter materials,

which he also brings in his mouth. The floor thus formed, is cemented by means of a gluten which he obtains from his own skin by continuous rubbing; an operation from which he evidently suffers great fatigue, and sometimes appears for a time quite overcome in the effort.

His next process is to attach a row of small uprights, or twig columns, to this base; in the performance of which he exhibits the most fastidious delicacy of taste, taking them out over and over again to refix them in a position more to his mind. Sometimes he may find a portion of the materials unsuitable; in which case he takes down a part or the whole of the structure, regardless of fatigue and trouble, and carries the useless lumber to a distance, so as not to encumber his future proceedings. As the walls rise he cements them as he had previously done the base, and then completes the roof in a similar manner. The structure when quite complete has two entrances,—a front and back door, as it were,—which he preserves in the desired form by frequently pressing in and out in opposite directions, so as to keep the nest in form and sufficiently open.

When the nest is finished fatal combats often ensue for its possession; and when at last preserved or conquered, the triumphant male invites some favourite female to come and occupy the edifice, over which he keeps guard during the whole time she is depositing her eggs; always wearing in honour of the joyful occasion his brightest hues of white and scarlet, or more regal purple. He continues to maintain his guard in full uniform until the eggs, or spawn, are all hatched, and the young fry begin to disperse; and then retires, his office over, and his gay colours faded to the usual dusky green.
